Get started

Welcome to the Confluence getting started documentation. In this section, you'll find tutorials and other information that'll be useful for evaluating Confluence, and getting to know it when you're starting out.

Teams in Space

For each tutorial in this section, we'll use a fictional organization known as 'Teams in Space'. Their mission is to:

"Perform flight research and technology integration to revolutionize aviation and pioneer aerospace technology. Also, land the first humans on Mars by 2020."

You're an astronaut in the 'See Space EZ' team, which is working on the upcoming colonization of Mars.

Go ahead – dive into the tutorials, and let us show you around Confluence and some of its handy features.

- Tutorial: Navigate Confluence
  - The dashboard
  - The space directory
  - The space sidebar
  - Keyboard shortcuts
  - Complete your mission

- Tutorial: Space ace
  - Create a project space
  - Create your personal space
  - Create the team's PR space
  - Delete and archive spaces

Tutorial: Navigate Confluence

Confluence is pretty simple to use, once you get to know it. This tutorial aims to get you acquainted with the Confluence user interface, and show you how and where to perform some common tasks.

Teams in Space
In this tutorial, you’ll be working with some new Teams in Space recruits. Let’s get to know them.

![Alana Baczewski](image1.jpg)  
**Alana Baczewski**  
Tech Lead

![Emma Silvetti](image2.jpg)  
**Emma Silvetti**  
Launch Specialist

![William Vladinov](image3.jpg)  
**William Vladinov**  
Aerospace Engineer

Now that you’ve met your team, let’s take a look at your mission.

**Mission brief**

Your mission commander has thrown you a curveball: this week you’ll be training new recruits at Teams in Space HQ on your collaboration tool – Confluence. You just need to know the basics, so we’ll go through the main things you need to know to complete your mission.

Your mission is broken up into the following components:

- Get to know the dashboard
- Find your way in the space directory
- Master the space sidebar
- Impress everyone with keyboard shortcuts

Those new recruits will be here tomorrow; we better get started!

Let’s go!

**The dashboard**

1. The dashboard  
2. The space directory  
3. The space sidebar  
4. Keyboard shortcuts  
5. Complete your mission

The dashboard is the hub of your Confluence site, providing you with access to information and updates that are important to you. It’s also the first thing your new recruits will see, so you need to make a good impression on this one.

You can get to the dashboard from anywhere in Confluence by choosing the site logo at the left of the Confluence header.

The dashboard has a collapsible sidebar that helps you get around:

- **Discover**  
  Watch the action unfold in real time with All updates or check out pages with lots of likes and activity in the Popular feed.

- **My Work**  
  Get lightning fast access to your recently created and edited pages in Recently worked on, get back to that page you stumbled across yesterday in Recently viewed, and have mission critical pages on speed dial under Saved for later.

- **My Spaces**  
  This is where you can keep links to the spaces that you hop in and out of several times a day.
If you’re a Confluence admin you can give the dashboard some personality by adding useful announcements, links, or a photo from your last mission (or office party). The whole right hand column is ready and waiting for you to customize.

1. **Discover**: see what's happening in your site.
2. **Your work**: get work done with recent and useful pages at your fingertips.
3. **Customize**: admins can add useful content to welcome people to the site.

Try clicking one of the spaces on the sidebar, then return to the dashboard by clicking the **site logo**. Even when your shuttle is spinning out of control, the dashboard is there to orient you.

You'll discover more about the dashboard as you get to know Confluence, but, for now, let's move on to the space directory.

### Pro tips
- You can choose to set any page as your personal home page
- You can always get to the dashboard at [https://yoursite.com/wiki/dashboard.action](https://yoursite.com/wiki/dashboard.action)
- Your Confluence admin can customize the global dashboard that all users see

### The space directory

1. **The dashboard**
2. **The space directory**
3. **The space sidebar**
4. **Keyboard shortcuts**
5. **Complete your mission**

The space directory won’t let you look up ET in the intergalactic phone book, but it will let you see and filter all the spaces in your Confluence site. Spaces are places to collect pages with a common theme – you can create as many spaces as you like – and you can find them all in the space directory.

Here are some tasks to get you comfortable using the space directory:

1. **Visit the space directory** – To get to the space directory, choose **Spaces > Space directory** in the Confluence header.
2. **Choose the spaces you’ll use the most** – No doubt there’ll be a space or two that you’ll use on a regular basis. Click the star to the right of a space to make it appear under **My Spaces** on the dashboard.
3. **Choose space categories** – Once you're there, you'll see a list of all the spaces in your Confluence site. Choose the 'My Spaces' category on the left to see only the spaces you marked with a star. Then choose all spaces again.

4. **Filter the list of spaces** – Type part of a space name in the **Filter** field at the top right. That'll quickly narrow down the list of spaces if there are a lot of them.

You can also categorize spaces with labels you create yourself. We're not going to cover that here, but, if you'd like to know more, you can check out Use Labels to Categorize Spaces.

Understanding and using the space directory will make it much easier to find pages and blog posts that are relevant to you.

You're ready to impress those new recruits with your knowledge of Confluence's space directory; now it's time to sneak a peek at the space sidebar.

### The space sidebar

1. The dashboard
2. The space directory
3. The space sidebar
4. Keyboard shortcuts
5. Complete your mission

What's in the sidebar?

The sidebar is a feature of every Confluence space; it's where you'll find the page tree (a hierarchical list of pages in the space), customizable space shortcuts, and a link to the space's blog.

The See Space EZ team will find their meeting notes, decisions, requirements, and other pages in the sidebar. Basically any page you create in the space will appear in the sidebar by default.

When you use certain page templates, like meeting notes, Confluence will automatically add an index page to your space shortcuts. The index page is just a place where you can view all pages of the same type – meeting notes in this example – in one place.

The space's blog is great for announcements and what's new-type updates.
1. **Space shortcuts**: link to Confluence pages or other pages on the web
2. **Page tree**: hierarchical view of pages in this space.

Configure the sidebar

You can expand or collapse the sidebar using the left square bracket ( [ ) on your keyboard, or by dragging it with your mouse.

There are lots of things you can change in the sidebar, but we'll stick to the basics – just enough to train your new recruits.

You need to be a space admin to complete this task. Take a look, but feel free to skip it if you’re not an admin of any space.

Try this out:

1. Choose **Space tools > Configure sidebar** from the bottom of the sidebar (or the cog menu if your sidebar is collapsed)
2. Add a space shortcut by clicking **Add link**
   Shortcuts can be to Confluence pages or spaces, or to any other content on the web. Try linking to thiss blog post, which mentions Teams in Space (we’re always after a plug at Teams in Space HQ!)
You can also hide things – like the space’s blog – in the sidebar, if they’re of no use in the space.

The sidebar is pretty easy, right? You’ll be schooling those recruits in no time. Next up: Impress them with your knowledge of keyboard shortcuts.

**Keyboard shortcuts**

1. The dashboard
2. The space directory
3. The space sidebar
4. Keyboard shortcuts
5. Complete your mission

Give a person some space food, and they'll eat for a day; teach a person to rehydrate their own space food, and they're set for the whole mission. Or something like that. Keyboard shortcuts fall into this basket. We could give you a list here, but then you'd need to keep referring to this page. The best way to go is to show you how to find the list of keyboard shortcuts **within Confluence**.

Your recruits also need to work fast, so you'll need to pass this wisdom on to them.

**Find the keyboard shortcuts**

To open the list of keyboard shortcuts in Confluence, do any of the following:

- Choose the help icon at top right of the screen, then choose **Keyboard Shortcuts**
- When viewing a page, press **Shift+?**
- While editing a page, choose the question mark icon ? in the editor toolbar

What you’ll see is a dialog listing the available keyboard shortcuts, for your operating system, in Confluence.

<table>
<thead>

<td></td>
<td>Editing Actions</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Preview: <code>X + Shift + E</code></td>
<td>Save: <code>X + S</code></td>
<td></td>
</tr>
</tbody>
</table>

The keyboard shortcuts are broken up into 3 categories:

- **General** – Global, page and blog post shortcuts.
- **Editor** – Text editing and formatting shortcuts.
- **Editor Autoformatting** – Wiki markup and autoformatting shortcuts.

You can turn the 'General' keyboard shortcuts off when you visit the **General** tab in the keyboard.
Take some time to open the dialog and take a look at the shortcuts, and maybe find some you'll use a lot. Then, start practising!

Want a printable sheet of keyboard shortcuts? Keyboard shortcuts infographic - you're welcome.

Next, we'll wrap up this mission and give you some ideas about where to head from here.

**Complete your mission**

1. The dashboard  
2. The space directory  
3. The space sidebar  
4. Keyboard shortcuts  
5. Complete your mission

Well done, astronaut, you've acquitted yourself admirably. I'm sure those new recruits will be mightily impressed with your knowledge of Confluence.

In this tutorial, we've:

- Explored the anatomy of the dashboard  
- Navigated using the space directory and favorited a space  
- Taken a look at and customized the space sidebar  
- Found a handy list of keyboard shortcuts to help you work faster

Just look at your team's adoring faces...

If you'd like to take things to the next level, check out our tutorial on becoming a space ace.

**Tutorial: Space ace**

This tutorial will take you on a journey through Confluence to create and customize spaces, and delete them if you want to, so you can achieve the rank of 'Space Ace'!

You'll need to have the 'Create space' and 'Create personal space' permission to complete this tutorial. If you've just set up Confluence, you won't have any trouble; if you're using an existing instance and you're not an admin, speak to your Confluence admin to make sure you have the right permissions.
Teams in Space

In this tutorial you're a new recruit on the Teams in Space crew, but, even though you're new, you'll be given a lot of responsibility. You need the power to go with it.

Mission brief

You're in charge of organizing information and resources for the planned mission to Mars. There's going to be plenty of important information, and it must be readily available to the people who need it. Some information, though, will be sensitive, and may be 'for your eyes only.' You'll use the power and flexibility of Confluence spaces to organize information, and make sure it's visible to the right people.

Your mission is broken up into the following components:

- Create a space to house all of the important information related to the mission
- Create your own space to keep yourself organized
- Create a public relations space, where you'll introduce your team the world

What's a space?

Well, being an astronaut, I hope you know what space is, but what's a Confluence space all about? It's really just a place to put related things, like information pages and files. But spaces also give you a place to collaborate with groups of people, whether that's your team, people working on a common project, or the whole world.

Every space has its own permissions, allowing you to grant access and other privileges to the right people. They also have a blog, so you can post important messages and updates to whoever can see the space. You can have as many Confluence spaces as you like, and you can archive or delete spaces when you no longer need them.

Enough about that; let's begin.

Create a project space

1. Create a project space
2. Create your personal space
3. Create the team's PR space
4. Delete and archive spaces

The Mars colonization crew needs a place to put all their mission-critical information and resources, and you're charged with setting it up. This part is going to be easy, because the information needs to be viewable by the entire Teams in Space organization. That means we can set up the project space without any special permissions.

If you haven't done so already, open up Confluence and log in so we can get started.

Create the space

1. Choose Spaces > Create space from the Confluence header
2. Select the Blank space option and choose Next
3. Enter a Space name – for this space, we'll call it 'Mars Colony', as it's being used for the Mars colonization project.
4. Change the Space key to 'MARS' – this step isn't absolutely necessary, but it helps people if they're navigating to this space by name. The space key forms part of the URL, so making it a word or name makes it much easier to associate with your project.
5. Click Create

You now have a space set up for the Mars colonization project. Because everyone at Teams in Space HQ
needs access to the information in this space, you don't need to do anything with the space's default permissions. It's visible to everyone in your organization, but not to the general public.

Every space has a default home page, which you can customize to suit your needs. Add the following image and text to your space's home page to get things started. Just click Edit (or press E on your keyboard) to edit the home page, and copy and paste the text. For the image it's best to drag it to your desktop and save it there, then drag it into your page. That'll make sure the image is attached directly to the page.

Hit Save when you're happy with the home page.

---

A human mission to Mars has been the subject of science fiction, engineering, and scientific proposals throughout the 20th century and into the 21st century. The plans comprise proposals to land on Mars, eventually settling on and terraforming the planet, while exploiting its moons, Phobos and Deimos.

Exploration of Mars has been a goal of national space programs for decades. Preliminary work for missions that would involve human explorers has been undertaken since the 1950s, with planned missions typically being cited as taking place 10 to 30 years in the future when they are drafted. The list of manned Mars mission plans in the 20th century shows the various mission proposals that have been put forth by multiple organizations and space agencies in this field of space exploration.

Your 'Mars colony' space is ready for your team to add pages to. If you want to find it again, choose Spaces in the Confluence header, and select it from the list; to add a page to it, navigate to the space and hit Create in the header.

Now it's on to your personal space; a place where you can work in peace, and be sure that no one's looking over your shoulder.

Create your personal space

1. Create a project space
2. Create your personal space
3. Create the team's PR space
4. Delete and archive spaces

As a newbie on the team, you might want to keep some work to yourself until you're ready to present it. There's always the chance your mission commander will also send you some information that's 'for your eyes only,' and you'll need to keep that in a safe place.

For this part of the mission, we'll be creating a special type of space: a personal space. We'll be using your personal space like a sandbox, at least to start with – somewhere you can play around, draft pages, try out features, and generally see what spaces are capable of.

Create your personal space

1. Choose your profile picture at the right side of the Confluence header
2. Select **Add Personal Space**...
3. Hit **Create**

You've now got a space that you can call your own. But we still need to lock it down to make sure it's only visible to you.

4. Choose **Space tools > Permissions** from the bottom of the sidebar
5. Hit **Edit Permissions** (enter your password if prompted)

You should see the **confluence-users** group listed under **Groups**. To the left of the list of permissions is the **View** permission, which determines whether everyone in that group can see your space.

6. Uncheck **View** and hit **Save all** at the bottom of the page

You're now the only one that can view this space. Feel free to try anything in this space, and store super secret stuff here.

### Create the team's PR space

1. Create a project space
2. Create your personal space
3. Create the team's PR space
4. Delete and archive spaces

Now it's time to go public; the world needs to know about the mission and its brave participants.

In this step, we'll create a team space and open it up to everyone. That's right – you can open Confluence spaces up to anonymous (not logged in) users.

In order to allow anonymous access to your Confluence site, a site admin needs to grant anonymous users the 'Use Confluence' permission. Don't worry if you can't do that, or if it's not done; it's just something to note if you're opening up your Confluence site for real.
Create a Team space

1. Choose **Spaces > Create space** from the header
2. Select **Team Space** and hit **Next**
3. Enter a **Space name** (let’s call it ‘Mars PR’)
4. Change the **Space key** to ‘MarsPR’
5. If there are other people using Confluence with you, feel free to add them as **Team members** (you can remove them later), or just stick with yourself for now
6. Paste this in as the **Description**: Follow the progress of the brave Teams in Space astronauts as they embark on their mission to colonize Mars.

Great! You now have a team space, again with its own home page. This home page is a little different to the project space and your personal space – you’ll see any team members you added, listed on the home page.

Each space you create also has its own blog, so your social media team will be able to create posts in this space and speak directly to all those adoring fans. But none of those fans can see this space. Yet.

Allow anonymous access

It’s time to let the world in by changing the permissions on this space.

1. Choose **Space tools > Permissions** from the bottom of the sidebar
2. Scroll down until you see **Anonymous**, then hit **Edit Permissions**
3. Tick the **View** permission for anonymous users and hit **Save all**

That’s it. You can now share the space’s URL, which will be http(s)://<your_confluence_site>/display/MarsPR. Visitors to that space don't need to log in, or have a license for Confluence.

Delete and archive spaces

1. Create a project space
2. Create your personal space
3. Create the team’s PR space
4. Delete and archive spaces

We hope you've had a successful mission, and learned a bit about the power and versatility of Confluence spaces. Flash forward 18 months, and just look how well the colony is coming along!
If you need to clean up old spaces (or destroy the evidence of a failed mission!), you can either archive or delete a space. Archiving just means it won’t show up in the regular search, whereas deleting is obviously a lot more permanent.

**To archive a space:**

1. Choose **Space tools > Overview** from the bottom of the sidebar
2. Click **Edit Space Details**
3. Change the **Status** from ‘Current’ to ‘Archived’ and hit **Save**

**To delete a space:**

1. Choose **Space tools > Overview** from the bottom of the sidebar
2. Select the **Delete Space** tab

**What next?**

If you'd like to know more about spaces and the permissions that govern them, check out **Spaces and Permissions and restrictions** in the Confluence documentation.

Teams in Space HQ, signing off.

**Spaces**

**What is a space?**

Spaces are Confluence's way of organizing content into meaningful categories. Think of it like having different folders into which you can put your work.

Spaces come in two main varieties:

- **Site spaces** – These spaces are found in the **Space Directory** and are the areas where you create content and collaborate with others. They are sometimes called global spaces.
- **Personal spaces** – Every Confluence user can set up a personal space which they can keep private or make public so others can view and edit. Personal spaces are listed in the **People Directory** and found under your personal profile.

**How do I use a space?**

Create as many spaces as you need to get things done:

**On this page:**

- What is a space?
- How do I use a space?

**Related pages:**

- Create a Space
- Space Permissions Overview
- Navigate Spaces
- Organize your Space
- Customize your Space
- Archive a Space
- Export Content to Word, PDF, HTML and XML
- Delete a Space
- **Team spaces** – Give each team (QA, HR, Engineering, Support, ...) their own space so they can focus and make their information easier for everyone to find.
- **Project spaces** – Put all the information related to your project in one place. This allows everyone to work together in Confluence instead of emailing back and forth.
- **Personal space** – Store everything you're working on individually, keep your to-do lists, and polish any content before you move it into another shared space.

*Stay up to date with spaces*

- Watch a space to stay up-to-date with any changes.
- Add important spaces to your dashboard so that they're easy to find again.

*Administer spaces*

If you have admin permissions for a space you can:

- Change the colors, logo, sidebar and homepage of that space.
- Control who can view and edit your space.
- Make your space public to share it with people who don’t have access to Confluence.

*Space Permissions*

Some things we should make clear about space admin permissions:

- The person who creates a space automatically has admin permissions for that space.
- Space admins can grant admin permissions to others.
- Space admins don’t have to be Confluence admins and can have special permissions for a single space. For example, you are the admin for your personal space, no matter what kind of access you have anywhere else.

Want more ideas for using spaces? Check out our kickass guides on how to:

- Use Confluence as a Knowledge Base
- Develop Technical Documentation in Confluence
- Use Confluence as your Intranet
- Use Confluence for Software Teams
Create a Space

There’s no limit to the number of Spaces you can create on Confluence. You can choose to set up a space for each team, project, or a mix of both depending on your needs.

Each space in Confluence functions autonomously, which means that each space:

- Has its own homepage, blog, pages, comments, files, and RSS feeds.
- Can be customized with different color schemes, logo and sidebar.
- Has its own set of permissions, as set by the space admin.

For example, an IT team can create one overarching space with all their roadmaps, details of sub-teams, and a list of all the people and roles within that team. They could then create a new space for each sub-team, such as Quality Assurance, Developers, and Documentation, with guidelines, long term plans, and knowledge articles within them. Each project that these teams work on could also have its own space, which could be linked to the team spaces using labels.

Create a personal space

Your personal space is always owned by you, and you can use it to store your individual work, keep track of tasks, blog about what you’ve been working on, or just use it to polish your pages before you move them into a site space.

1. Choose your profile picture at top right of the screen, then choose Add Personal Space.
2. Choose Create.

You can change the permissions for your space at any time to determine who can and can’t access the content. So if you want it to be a private sanctuary, that’s no problem.

To create a personal space you need the ‘Personal Space’ global permission.

Create a site space

You can create a site space for any team or project that would benefit from having a place where people can work together and store related files. You can create these as blank spaces, or use templates, called space blueprints, to help you create Team spaces, Knowledge Bases spaces, or Documentation spaces quickly and easily.

1. Hit Spaces > Create space in the header.
2. Pick a type of space.
3. Enter the required details and create your space.

⚠ Choose your space key carefully as you can’t change this later.

Each space you create will automatically have a home page that you can customize to display relevant information for people viewing the space. If you use a space blueprint when creating a space, it will customize your home page for you.

ℹ To create a site space you need the 'Create Space' global permission.

![Create team space interface](image)

### Space permissions

Each space is created with a set of default permissions. The user who created a site space is automatically granted 'space admin' permissions for that space, which means that they can then grant permissions to other users and groups. See Space Permissions Overview for more information.

ℹ System Administrators can edit the permissions of spaces in their Confluence site at any time.

### Linking related spaces

You can link related spaces together using labels. This will create categories in the space directory for each label, grouping all spaces with that label together.

![Space Directory interface](image)

- You can also add a **space description** to make it easier for visitors to find the right space within each category.
- To help navigate between related spaces, you can use the **Spaces List Macro** on a page and filter by category. This will let you insert a list of all the other spaces in a certain category into your space. You can use this, for example, to keep a list in your team space of all the project spaces your team is working on.
- If you want to link to only certain pages of related content, rather than whole spaces, you can use the **Content Report Table Macro**. You can use this, for example, in a space that functions as a workplace directory, to create a list of all the team pages with everyone’s roles and contact details across your organization.
Tips

- If your needs change, or your spaces grow too big, it’s easy to copy or move content from one space to another.
- If the content or purpose of your space changes, you can update the space name, logo, colors and description to reflect those changes.
- If you no longer need a space, such as when a project has been completed, you can archive it, which makes it less visible but retains the content on your site so that you can still refer back to it later.

Create a Space From a Template

Confluence comes with a number of templates, known as space blueprints, which have a customized homepage and sidebar, and may contain page blueprints or sample content to help you get started.

Types of space blueprints

Team space

A great building block if you are using Confluence as an intranet or to manage teams. Team spaces highlight the members of the team, and grants permissions to those users accordingly.

Knowledge base space

This space blueprint uses search and page labels to make content easier to find, right from the space homepage. It also contains two page blueprints for creating how-to and troubleshooting articles. The templates used in these page blueprints are completely customizable. The Knowledge Base space blueprint also Use Jira applications and Confluence together.

Documentation space

This space blueprint displays the full page tree in the sidebar and hides other sidebar features including blogs and shared links. The homepage uses search and page labels to make content easy to find. Add the ‘featured’ label to any page you want to highlight on the homepage. This space does not include any page blueprints but you can create and promote templates for your documentation authors to use.

Software project space

This space is designed to help you organize your software project. The purpose-built space home page lets you view and edit your roadmap, see team members, and Use Jira applications and Confluence together#JIRA Software. Create pages in this space for requirements, meeting notes, decisions, retros, and more.

The software project space blueprint will only appear if you have linked Confluence to your Jira Software instance.
Space Keys
Each Confluence space has a space key, which is a short, unique identifier that forms part of the URL for that space.

When you create a site space, Confluence will suggest a space key or you can enter your own key to make it more memorable.

For example, you might give your marketing team's space a key of MARKETING. You can then navigate directly to the space using a URL like this - http://<yoursite>/display/marketing

Personal spaces always use your username as the space key.

Choosing a space key
Each space key:
- Must be unique.
- Can contain any alphanumeric character (a-z, 0-9).
- Can be up to 255 characters long.

⚠️ You can't change the space key after you create your space, so choose your space key carefully!

Navigate Spaces
How is content arranged in spaces?
Think of a space as the container that holds all the important stuff a team, group, or project needs to work. These are autonomous – that means that each space has its own pages, blogs, files, comments and RSS feeds.

Each space is automatically created with a homepage - the first page you’ll see when you navigate to the space. You can edit your homepage and your sidebar to help people navigate their way around your space.

Spaces can’t be nested – you can’t have a space within a space – but you can **Use Labels to Categorize Spaces**. Spaces with the same label will appear together in the space directory and in the recent activity area of the dashboard.

Inside the space, you can nest your pages, and you can create as many levels of hierarchy as you need. Each space also has its own blog, which lets you share news and make announcements. Blog posts are a great way to keep people involved in what’s going on in your team or project.

You can set different levels of access for each space, and the pages and blogs within it, using **Space Permissions Overview**.

**View all spaces in Confluence**

There are two main ways to view spaces in Confluence:

- **The space directory** – choose **Spaces > Space directory** in the Confluence header for a list of all the site and personal spaces you have permission to see. Filter the list of spaces by selecting from the categories on the left of the space directory.

- **The dashboard** – you can make your most useful spaces appear under **My spaces** on the dashboard. Choose the star icon in the space sidebar or space directory to add a space to **My spaces**.
The **spaces menu** in the header also displays a list of your recently viewed spaces, allowing you to quickly navigate to the things you view most often.

The **Spaces List Macro** allows you to display a list of spaces on a Confluence page, and lets you filter them by category.

**Space Permissions Overview**

Each space in Confluence has its own set of permissions, which can be granted and revoked by a space administrator. The user that creates a space, like when you create your personal space, is automatically an administrator of that space, and they can add other space admins if they want to by adding the **Space Admin** permission to another user or group.

**How do you find out who the space admin is for a particular space?**

Choose **Spaces > Space directory** in the Confluence header, then choose the **Space Details** icon beside a space.

If you're one of those lucky space admins, you can assign permissions for the space to individual users, groups, or anonymous users. To change permissions for a space, choose **Space tools > Permissions** from the bottom of the sidebar, then choose **Edit Permissions** to change permission settings.

Space admins can also manage watchers for that space by choosing **Watch > Manage Watchers** at the top-right of any page in the space.

If you accidentally deny all admin access to a space so that nobody has access to administer the space any more, you can ask someone with Confluence Administrator global permission to recover **Space Permissions**.

---

**Permissions Summary**

The following permissions can be assigned for each space:

<table>
<thead>
<tr>
<th>Category</th>
<th>Permission</th>
</tr>
</thead>
<tbody>
<tr>
<td>All</td>
<td><strong>View</strong> gives you permission to access the content in this space, and see it in the space directory and other places like the dashboard. <strong>Delete own</strong> gives you permission to delete any pages, blogs, attachments and comments you've created in this space (regardless of whether other users have subsequently edited the content).</td>
</tr>
</tbody>
</table>

---

Related pages:
- Confluence Groups
- Assign Space Permissions
- Page Restrictions
- Global Permissions Overview
<table>
<thead>
<tr>
<th>Pages</th>
<th><strong>Add page</strong> gives you permission to create new pages and edit existing pages in this space (assuming the page is not restricted for editing). <strong>Delete page</strong> gives you permission to delete any page in the space.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Blog</td>
<td><strong>Add blog</strong> gives you permission to create new blog posts and edit existing blog posts in this space (assuming the blog post is not restricted for editing). <strong>Delete page</strong> gives you permission to delete any blog post in the space. Delete permission is also required to move a page or blog to a different space.</td>
</tr>
<tr>
<td>Attachments</td>
<td><strong>Add attachment</strong> gives you permission to upload (attach) files to pages and blog posts in this space. <strong>Delete attachment</strong> gives you permission to remove attached files from pages or blog posts in the space. People with only Add page or blog permissions can still insert existing attached files in the editor, and remove files from the editor, so they’re not displayed on the page or blog post. They can’t however upload a new file, a new version of the file, or delete the attached file itself.</td>
</tr>
<tr>
<td>Comments</td>
<td><strong>Add comments</strong> gives you permission to add comments to a page, blog post or attached file. <strong>Delete comments</strong> gives you permission to delete any comment on a page, blog post or attached file.</td>
</tr>
<tr>
<td>Restrictions</td>
<td><strong>Add restrictions</strong> gives you permission to apply page-level restrictions to a page or blog post. You can restrict a page for viewing, or just for editing. <strong>Delete restrictions</strong> gives you permission to remove restrictions from any page or blog post.</td>
</tr>
<tr>
<td>Mail</td>
<td><strong>Delete mail</strong> gives you permission to delete mail items that have been archived in this space. This is not a commonly used feature.</td>
</tr>
<tr>
<td>Space</td>
<td><strong>Export space</strong> gives you permission to export all the contents of the space to PDF, HTML or XML. This is different to single page exports - anyone who can view a page can also export it. <strong>Admin</strong> gives you permission to access all space administration tools, including things like permissions, templates, look and feel, and the ability to delete the whole space.</td>
</tr>
</tbody>
</table>

Here’s how it looks on the **Permissions** screen:

![Permission Screen](image)

ℹ️ Confluence administrators aren’t necessarily space administrators. In order for them to be a space admin, they must belong to a group which has space admin and view permission for the space, or their username must be specifically granted space admin and view permission for the space. People with the System Administrator global permission can choose to grant themselves space admin permissions for any space.

Space permissions are additive

Space permissions are additive. If a user is granted permissions as an individual or as a member of one or more groups, Confluence will combine these permissions together.

**Here’s an example...**

Sasha is a member of the confluence-users group and the developers group. The confluence-u
sers group has 'export' permission, but does not have 'restrict' permission. The developers group has 'restrict' permission but does not have 'export' permission.

By being a member of these two groups, Sasha can restrict and export content. The permissions do not conflict, they combine to determine what Sasha is allowed to do in this space.

Assign Space Permissions

If you are the administrator of a space, you control the permissions for it. You can choose to assign/revoke permissions on either an individual user basis, or by Confluence Groups.

Confluence Administrators can put users into groups to make it easier to manage permissions. If you are not an administrator and want to know if someone belongs to a group, ask your administrator to check for you.

Permissions in Confluence are additive, so if you belong to different groups with different permissions, you will have the combined permissions of those groups.

To access the permissions for a space:

1. Go to the space and choose Space tools > Permissions from the bottom of the sidebar.
2. Choose Edit Permissions.

The Edit Space Permissions page is divided into the following sections:

- **Licensed Users** - this is where you grant permissions to groups and individual users.
- **Anonymous Access** - this is where you grant permissions to users who are not logged in (essentially making the space public). Note: allowing anonymous access in a space will allow all logged in users to see that space, even if your site is not Public.

On this page:
- Assign space permissions
- Revoke space permissions
- Manage and recover space admin permissions

Related pages:
- Space Permissions Overview
- Global Permissions Overview
- Make a Space Public
- Give Access to Unlicensed Users from Jira Service Desk
Assign space permissions

To add a new user or group to the permissions list, search for either a group or user in their respective sections and choose Add. The group or user will appear in the list of groups; select the specific permissions you'd like to apply then choose Save all. You can bulk assign or revoke permissions by selecting Select All or Deselect All.

There is no way to change permissions for multiple spaces at once. Permissions are managed on a space by space basis. However, your Confluence Administrator is able to set default space permissions, which will apply to any new spaces.

To set the default space permissions:

1. Go to General Configuration > Space Permissions.
2. Choose Edit Permissions.

Default permissions are configurable for groups only, not for individual or anonymous users.
Revoke space permissions

To remove a user or group from the space permissions list, deselect all the checkboxes for that user or group and save the changes. The user or group won't appear in the list once you save.

Manage and recover space admin permissions

If you’re a Confluence Administrator and a space admin accidentally denies all admin access to a space, so that nobody has access to administer that space any more, you are able to recover those permissions for them.

To recover Space Admin permissions:

1. Go to
   > General Configuration > Space Permissions.
2. Locate the space in the Individual Spaces list and choose Recover Permissions.

You can then choose Manage Permissions, and add any other appropriate permissions to the space. Requests to recover permissions are recorded in the Confluence audit log.

Users with System Administrator permissions are able to manage permissions for all spaces, they do not need to first recover permissions.

<table>

<tr>
<td>Dev team</td>
</tr>
<tr>
<td>IT Knowledge Base</td>
</tr>
<tr>
<td>Marketing Knowledge base</td>
</tr>
<tr>
<td>Social</td>
</tr>
</tbody>
</table>

Make a Space Public

If you want to share your space with people who are not logged in to Confluence (anonymous users), you can make your space public.

Making a space public does not let you choose who you want to share it with – a public space can be viewed by anyone inside or outside of your organization.

In order to make a space public, your administrator must first turn on the global permission for anonymous access.

This permission doesn't automatically grant anonymous users permission to see any of the content on your site, but it does need to be turned on to give space admins the option of granting anonymous users access to their space.

To make your space public:

1. Go to the space and choose Space tools > Permissions from the bottom of the sidebar.
2. Choose Edit Permissions.
3. Scroll down to the Anonymous Access section and select the specific permissions you'd like anonymous users to have.
4. Save All to apply the changes.

Related pages:

- Give Access to Unlicensed Users from Jira Service Desk
You can't grant space administration or page restriction rights to anonymous users.

⚠️ If your Confluence administrator turns off anonymous access to your site, users who are not logged in will no longer be able to see any spaces. However, all logged in users (regardless of their group membership) will be able to see all spaces that have granted space permissions to anonymous users.

Auditing considerations

There are some additional things to be aware of if you grant the Add page permission to anonymous users.

You won't be alerted, when closing the editor or publishing a page, if the only unpublished changes on the page were made by anonymous users. This means a logged in user may inadvertently publish changes they were not aware had been made to the page.

The changes themselves are visible in the page, but the usual warning dialog will not appear if the only people to have made changes were not logged in.

If there are unpublished changes from both logged in users and anonymous users, the warning dialog will appear, but only the logged in users will be listed in the dialog. Changes made by all users (including anonymous) will be included if you view the changes from that dialog.

Give Access to Unlicensed Users from Jira Service Desk

If you're using Confluence as a knowledge base for Jira Service Desk, you can choose to allow all active users and customers (that is, logged in users who do not have a Confluence license) to view specific spaces. This can only be turned on via JIRA Service Desk.

When a space is accessible to all active users, you'll see the following message in the space permission screen.

This permission overrides all existing space permissions, so any logged in Confluence user will also be able to see the space (regardless of their group membership).

You can edit this permission at any time to revoke access to a space, but it can only be re-enabled from Jira Service Desk.

Active users who don't hold a Confluence license have very limited access to Confluence. They can view pages, but can't like, comment, edit, view the dashboard, use the space directory, see user profiles or search your full site.
Organize your Space

Here's a few tips that'll help you organize your space so that everyone can find what they're looking for and stay on top of what's important to them.

On this page:
- How do I organize content within my space?
- Pages and blogs
  - Configure the sidebar
  - Using labels
- How do I keep my space tidy?
  - Create a set of guidelines
  - Use page blueprints
  - Create from template macro
  - Create your own page templates
- How do I help my team stay on top of what's important?
  - My Spaces
  - Save for later
  - Watch a page, blog or space
- @mentions

How do I organize content within my space?

Pages and blogs

Everything you create in Confluence, from meeting notes to retrospectives and everything in between, takes the form of either pages or blogs.

- Your homepage will be the first thing that visitors to your site see, so to help them find relevant content, start by curating your homepage with useful macros and including information about what is in your space. See Set up a Space Home Page for more information.
- If you're creating content that is specific mainly to the current time-frame, and isn't going to change over time, create it as a blog post. Your blog displays as an infinite scroll, so it surfaces the latest news and visitors just need to scroll down if they're interested in older content.
- If you're creating content that you want to last, and possibly evolve over time, then create it as a page. Pages nest, so every page can have its own child pages, which lets you organize your content into categories and subcategories.

Configure the sidebar

You can Configure the Sidebar to make it easier to navigate through your space.

The space shortcuts section of the sidebar lets you link to important content. You can use this to highlight pertinent pages within your space, related content from other spaces, or to external content that is relevant to your space.

The navigation display lists all of the pages in your space in either a page tree or child pages format. If you only want some content to be visible in the sidebar, you can hide the navigation display and put the pages you want to remain visible under Space shortcuts instead.
Using labels

Labels are keywords or tags that you can add to pages, blog posts, and attachments.

- Define your own labels and use them to categorize, identify, or bookmark content in Confluence. For example, if you assign the label 'accounting' to all accounts-related pages on your site, you'll then be able to:
  - Browse all pages with that label in a single space or across the site.
  - Display a list of pages with that label.
  - Search based on that label.
- Use the Content by Label Macro to create a table of contents for your space that is organized by label categories.
- Labels aren’t exclusive, so you can have as many labels as you want on a page. The page will then appear under each of those categories. See Use Labels to Categorize Spaces for more information.

How do I keep my space tidy?

If you have lots of people creating in the same space, things can get messy fast. You can prevent this by taking a few easy steps.

Create a set of guidelines

- Let your collaborators know about what parent pages to create their child pages under, so no content gets lost or misplaced.
- Decide on standard labels to add to pages, blogs, and attachments so all content gets neatly categorized.
- Add a link to this in the Space Shortcuts section of the sidebar so that it’s easy to find.

Use page blueprints

Blueprints are templates that come with formatting, macros and sample content. You can customize these Blueprints for each space. Everything created from a Blueprint will have its own index in the sidebar, so for
example if you use the Meeting Notes Blueprint, you can select 'Meeting Notes' in the sidebar to see a list of all the meeting notes in your space.

Create from template macro

Make things simpler for other contributors by using the Create from Template Macro. The Create from Template Macro lets you put a button on a page that links to a specific template of your choice. When the button is clicked, the macro opens the editor, ready to add a new page, and adds content to that page based on the given template.

Create your own page templates

Create your own templates for any content that you want formatted the same way every time. For example, if you have to create a regular report tracking the same criteria, create a template with headings, variable dates, tables, and spaces for any graphics, so that each time all you have to do is input the new data instead of creating the whole report from scratch.

How do I help my team stay on top of what's important?

If you've got a lot of content on Confluence, staying on top of everything may seem a little daunting – but these features will help your team save and track all the content they care about.

My Spaces

Add any spaces that you want to be able to navigate to easily to your list of 'My Spaces'. This list can be found under your dashboard and in the Space Directory, and you can also use the Spaces List Macro to display it on a page or blog.

To add a space to your list of 'My Spaces', either navigate to that space or find it under the Space Directory, and select the star icon next to the Space Name. To remove it from the list, just select the star icon again.
Save for later

If you only want links to certain pages or blogs rather than a whole space, you can choose Save for later and these will appear on your dashboard and under your profile. You can use the Favorite Pages Macro to display a list of all of everything you’ve saved for later.

Watch a page, blog or space

If you want to keep track of all the changes made to a page, blog, or space, you can also watch them. Watching any content means that you will receive email notifications for all edits, deletions, attachments or comments made to that content.

• To watch a page, navigate to the page you want to watch, then choose Watch > Watch page, or if you want to watch the whole space, select Watch all content in this space.
• To watch a blog, navigate to that blog and choose Watch this blog.
• To stop watching something, deselect the relevant checkbox.

You can also manage watchers for your own space. This is useful when, for example, you’re creating a new project, and want the team members on that project to stay notified of its progress. Go to any page in that space and choose Watch > Manage Watchers, then add or delete any names under ‘Watching this space’.

@mentions

Use @mentions for any work where you need someone else’s input or want to assign someone a task. Mentioning someone works like a tag; they’ll immediately receive a notification that they’ve been mentioned, and can click through to that page or blog. If you mention someone when creating a task, it’ll assign that task to them and they’ll also be able to find it under their profile.

You can use this in place of emails – if you want someone to look something over, add in additional information, or approve anything, simply put that work on Confluence and assign it to them as a task. They’ll be able to make any changes or comments within Confluence and let you know when they’re done by mentioning you back.

Set up a Space Home Page

When you create a space, Confluence automatically creates a home page for that space. Spaces created with a blueprint come with a ready-made home page populated with useful macros and sample content specific to the blueprint’s use case.
However, even if you’ve started with a blank space, you can still customize your home page to make it easier for everyone using that space to navigate their way around and find useful content.

**On this page:**
- Create a kick-ass home page
- Top macros for common types of spaces
- Set up your personal space home page
- Set another page as your home page

**Related pages:**
- Organize your Space

### Create a kick-ass home page

**What is this space about?**
Your home page is the first page visitors will see when they visit your space, so it helps to include some information about what the space is about, and what you’re working on. You can use the **Info, Tip, Note, and Warning Macros** to create a colored box in which to put this information.

**What is in this space?**
You can use the **Content Report Table Macro** to create a table of contents for your space. You can also set this macro to only display content with a particular label, so if you would like only some content to display, you can do this by adding that label to only those pages and blogs you want listed on your home page.

**Organize your space with labels**
You can organize content in your space with labels, so that for example, if you have a Learning and Development space, you can create different labels for online learning resources, upcoming workshops, and training strategy. You can then use the **Labels List Macro** to create a list of those labels to make it easy for visitors to your space to find the content relating to each of those topics.

**Add a search box so that it’s easy to find content within your space**
The **Livesearch Macro** allows you to add a search box to a Confluence page, and you can set it to only find content within your space.

**Keep everyone updated about the latest changes within your space**
If it’s important for your visitors to know about the latest changes to your space, you can use the **Recently Updated Macro** to display a list of the most recently updated content. You can set the space parameter to show this for just your space, or, if you have related spaces, to show the most recently updated content across all of those spaces as well.

**Using Jira? Create and display your Jira issues on Confluence**
If your Confluence site is connected to a Jira application, you can both create and display your Jira issues without having to leave Confluence using the **Jira Issues Macro**. You can connect Confluence to any Jira application, including Jira Software and Jira Service Desk.
Top macros for common types of spaces

**Team Spaces:**

- **Introduce the team:** The User Profile Macro displays a short summary of a given Confluence user's profile with their role, profile photo and contact details.
- **Share news and announcements with your team:** The Blog Posts Macro displays a stream of your latest blog posts so your team can easily see what's been going on.

**Knowledge Base:**

- **Have external content that you need on your page?** Embed online videos, slideshows, photo streams, and more, directly into your page with the Widget Connector Macro.
- **Put your own multimedia content onto the page:** The Multimedia Macro embeds attached video, animation, and other multimedia files on a Confluence page.
- **Create an index of all your content:** The Page Index Macro creates a hyperlinked alphabetical index of all page titles within the current space.

**Planning/Project:**

- **Keep track of everyone's tasks:** Use the Task Report Macro to display a list of tasks on a page. Filter the tasks by space, page, user, label, created date and more.
- **Is your project on track?** The Status Macro displays a colored lozenge (a rounded box) that is useful for reporting project status. You can choose the color of the lozenge and the text that appears inside the lozenge.
- **Let everyone see where you're going:** The Roadmap Planner Macro creates simple, visual timelines that are useful for planning projects, software releases and much more.
Using Macros

1. From the editor toolbar, choose Insert
   > Other Macros
2. Find and select the required macro

**Speed it up with autocomplete:** Type { and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.

![Macro suggestions]

**To edit an existing macro:** Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.

![Cheese](Edit Remove)

Set up your personal space home page

Whether you're using your personal space as a sandbox to draft and test content, a portfolio to show off what you're working on, a home base to navigate to your content in other spaces, or something completely different, these are some macros that should help you use your space more effectively.

- Use the Favorite Pages Macro to create a list on your home page of all the pages you've saved for later, so you can easily navigate back to any of them.
- Use the Content by User Macro to keep track of all the current pages, comments and spaces you've created so you can find everything you've been working on in one place.
- Use the Task Report Macro to keep track of all tasks assigned to you, and tick them off as you finish them.
- Use the Recently Updated Dashboard Macro to keep track of all the content across your Confluence site that you're interested in - the Dashboard lets you choose which spaces, users, blogs, pages or files you would like to keep updated about.

Set another page as your home page

If at any point you decide that you would like another page within your space to be your home page, you can easily change this from the Edit Space Details tab.

To edit a space's details:

1. Go to the space and choose Space tools > Overview from the bottom of the sidebar.
2. Choose Edit Space Details.
3. Enter the page you want use in the Home page field then choose Save.
You can change the home page, name and description of your space, but you are not able to change the space key.

Use Labels to Categorize Spaces

If you've got lots of related spaces, you can use labels to group them together into categories in the **Space Directory**.

For example, if you're in an IT team who work on a number of projects, each in a different space, you could label each space 'IT-projects-open'. Then in the Space Directory you could select IT-projects-open to see all your current IT project spaces.

You can add as many space categories to a space as you need, so that if, for example, two different teams are working on a project together, you can add labels for both teams and space will appear under both categories.

Labels are easy to add or remove, so if your needs change, you can always recategorize your spaces.

Categorize a space

You need space administrator permissions to add categories to a space.

1. Go to the space and choose **Space tools > Overview** from the bottom of the sidebar
2. Choose **Edit** next to **Space Categories**.
3. Under **Space Categories**, enter your category name and choose **Add**.
   Alternatively, choose a category in the list of **Suggested Space Categories**.
4. Choose **Done**.
Add a space description

Help make it easier to find the right space within a category by adding a description to your space:

1. Go to the space and choose Space tools > Overview from the bottom of the sidebar.
2. Choose Edit Space Details.
3. Under the Description field, type a short description to tell visitors what your space is about, then choose Save.

View spaces in a category

To see what spaces are in a category, choose Spaces > Space directory in the Confluence header, then select one of the categories from the list.

You can also view spaces by category by using the Spaces List Macro and filtering by category.

Head to My Spaces in the Space Directory to see all your favorite spaces. When viewing a space, you can choose the star icon next to the space title in the sidebar to add it to My Spaces so that it's easier to find later.

Remove a space from a category

1. Go to the space and choose Space tools > Overview from the bottom of the sidebar
2. Choose Edit next to Space Categories.
3. Under Space Categories, choose the x icon next to each category that you want to remove.

⚠️ If you remove all spaces from a category, the category will no longer appear in the Space Directory.
There's no way to bulk remove a category, but you can choose the category in the Space Directory to find all the spaces it appears on, and then remove it from each space.

**Customize your Space**

Make your space stand out from the crowd by customizing its appearance.

If you have space admin privileges, you can change the color scheme for your space, add your own space logo, choose what shows up in your space’s sidebar, or use Atlassian Marketplace themes to change the whole look of your space.

- Configure the Sidebar
- Edit a Space’s Color Scheme
- Apply a Theme to a Space
- Customize Space Layouts

**Related pages:**
- Changing the Look and Feel of Confluence
- Styling Confluence with CSS

![Confluence Space Customization](https://example.com/screenshot.png)
Configure the Sidebar

If you have administration permissions for a space, you can customize the space's sidebar to have its own logo, change the way the hierarchy is displayed, and add shortcut links to help navigate to important content quickly.

To start configuring the sidebar, choose **Space tools > Configure sidebar**.

Change the space name and logo

To **change the space name**:

1. Choose
   
   next to the space name.
2. Type in a new space name and **Save**.

On this page:

- Change the space name and logo
- Configure the sidebar links
- Change the navigation display options
- Adding custom content to a sidebar

Related pages:

- **Edit a Space’s Color Scheme**
- **Organize your Space**
1. **Logo** - change the space name and logo
2. **Reorder** - drag to reorder shortcuts
3. **Hide** - hide or show pages, blogs, shortcuts or navigation display options.

**To change the space logo:**

1. Choose the 
   next to the space name.
2. Choose **Upload an image**.
3. Select an image from your computer.
4. Adjust the size of the image to fit within the highlighted circle.
5. Choose **Save**.

**Things you should know:**

- Space logos are 48px x 48px. Logos smaller than these dimensions will be centred with whitespace around them.
- You can only change the space logo for a site space. For your personal space, your profile picture is used as the space icon.

**Configure the sidebar links**

- Choose the icons to show or hide **pages**, **blogs**, **shortcuts** or **navigation options**.
  For example, if you want your space to be used primarily as a blog you can hide the 'Pages' link.
- Add-ons such as **Team Calendars for Confluence Server** may add other links in this section of the sidebar and you can also show or hide these.
- Choose **Add link** to add a shortcut link to the sidebar. This could be a link to an important page for your team, or to an external site.
- Drag links to reorder them within each section (you can't move a link from one section to another).

**Change the navigation display options**

- Choose **Child pages** to see the current page and its children in the sidebar.
- Choose **Page tree** to see the page tree for the entire space, expanded to the current page.
- You can also choose to completely hide the navigation display options and instead add the pages you want to be visible as shortcut links. Alternatively, you can remove the sidebar navigation altogether and use a **Page Tree Macro** or **Children Display Macro** on your homepage for navigation instead.

**Adding custom content to a sidebar**

You can further customize a sidebar using wiki markup to add custom content.
To add custom content to your sidebar:

1. Go to the space and choose **Space tools > Look and Feel** from the bottom of the sidebar.
2. Choose **Sidebar, Header and Footer**.
3. Enter your custom content in the **Sidebar** field.

The sidebar, header and footer fields all use wiki markup, check our [guide to wiki markup](#) for help, or check out some common customizations below.

**Add a search field to your sidebar...**

To add a search field to the sidebar add the following wiki markup for a search macro in the **Sidebar** field.

For the **LiveSearch Macro** macro:

```markdown
{livesearch}
```

For the **Page Tree Search Macro** macro:

```markdown
{pagetreesearch}
```

**Add a panel with some content...**

To add a panel with some custom content to the sidebar add the following wiki markup for the **Panel Macro** in the **Sidebar** field:

```markdown
{panel}This is some custom content to appear in the sidebar{panel}
```

**Add your own page tree to replace the default page tree...**

To hide the default page tree and add your own, with additional parameters:

1. Add the wiki markup for the **Page Tree Macro** in the **Sidebar** field.
   The following example includes parameters to expand the top three levels of the page tree by default and include an **Expand All** and **Collapse All** link above the tree.
   ```markdown
   {pagetree:root=Page Name|startDepth=3|expandCollapseAll=true}
   ```

2. Go to **Space Tools > Configure sidebar**.
3. Use the **Show** and **Hide** icons to hide the default page tree from the sidebar.

**Edit a Space’s Color Scheme**

Spaces inherit the global color scheme by default, but if you have admin permissions for a space, you can jazz it up with your very own customizable color scheme.

**To change the color scheme for a space:**

1. Go to the space and choose **Space tools > Look and Feel** from the bottom of the sidebar.
2. Choose **Color Scheme**
3. Choose **Select** next to a scheme listed under **Custom Color Scheme** (if not already selected)
4. Choose **Edit**
5. Enter standard HTML/CSS2 color codes or use the color-picker to choose a new color from the palette provided

**Customizable Elements**

The color scheme allows you to edit the colors of UI elements including the top bar, tabs and backgrounds.
Some UI elements below are for specific themes, and color changes may not take effect for other themes.

- **Top Bar** - the top navigation bar background
- **Top Bar Text** - the text on the top navigation bar
- **Header Button Background** - buttons on the top navigation bar (e.g. Create button)
- **Header Button Text** - the text on buttons on the top navigation bar
- **Top Bar Menu Selected Background** - background color of top navigation bar menu items when selected (e.g. spaces)
- **Top Bar Menu Selected Text** - text color of top navigation bar menu items when selected
- **Top Bar Menu Item Text** - text on top navigation bar drop down menus (e.g. help or cog)
- **Menu Item Selected Background** - highlight color on top navigation bar drop down menu items
- **Menu Item Selected Text** - text color on highlighted top navigation bar drop down menu items
- **Search Field Background** - the background color of the search field on the header
- **Search Field Text** - the color of the text in the search field on the header
- **Page Menu Selected Background** - the background color of the drop down page menu when selected
- **Page Menu Item Text** - the text of the menu items in the drop down page menu
- **Heading Text** - all heading tags throughout the space
- **Links** - all links throughout the space
- **Borders and Dividers** - table borders and dividing lines

---

**Handy Hint**
If you mess things up, just choose **Reset** then try again.

---

**Apply a Theme to a Space**
Themes are used to change the appearance of your space. Your Administrator can download and install themes from [The Atlassian Marketplace](https://marketplace.atlassian.com).

Once a theme is installed it can be applied to the whole site or to individual spaces.

**To apply a theme to a space:**
1. Go to the space and choose **Space tools > Look and Feel** from the bottom of the sidebar. You’ll need **Space Admin permissions** to do this.
2. Choose **Themes** and select a theme option.
3. Choose **Confirm**.

### What is the global look and feel?

When a new space is created, whichever theme is applied to the whole site will be applied by default to the new space. This is the global look and feel, and any changes made globally will flow through to all spaces that inherit the global look and feel.

If a space has its own theme applied, or if changes have been made to customize the look and feel of the space, it will no longer inherit changes from the global look and feel.

If you want to go back to inheriting the global look and feel choose **Global look and feel** from the **Themes** page.

### Documentation theme migration FAQ

As previously announced, the documentation theme is not available in Confluence 6.0. We know you'll have a lot of specific questions, so we've created this FAQ to help you prepare for upgrading to Confluence 6.0.

If you have further questions, you can ask them at the bottom of the page and we’ll do our best to provide an answer.

- What does the default theme look like?
- How can I check if I am using the documentation theme in my space?
- How can I check if the documentation theme is being used anywhere in my site?
- What will happen to my theme customizations during the upgrade?
- Will my space break after the upgrade?
- Can I add custom content to the sidebar, header and footer globally?
- Can I still use macros in my sidebar, header or footer?
- Where should I add custom content to the sidebar, header or footer?
- How do I turn off the Pages and Blogs shortcuts at the top of the sidebar?
- Can I edit the default theme’s sidebar globally?
- I want to see the page tree, not child pages. how do I do this?
- Where is Space Administration and Space Operations?
- Do I have to use wiki markup in the sidebar, header, and footer?
- Can I hide or change the space logo appearance?
- Can I hide the built in page tree and insert my own?
- How can I make my page titles wrap in the sidebar?
- Can I change the order in which things appear in the sidebar?
- Can I still use the space jump macro?
- Why don’t child pages appear below the page?
- Can I restrict search to just this space?
- How do I view the pages in my space alphabetically?
- What will happen if I import a space that uses the documentation theme?
What does the default theme look like?

Here's an example of the documentation theme, and default theme with the same custom content side by side:

1. **Documentation theme**: with custom sidebar content.
2. **Default theme**: with the same custom content in the sidebar.

**How can I check if I am using the documentation theme in my space?**

The easiest way to check whether your space is using the documentation theme is to look for a **Browse** menu in the header, near the **Create** button. (If you're using the default theme already, you'll see a Space Tools menu at the bottom of the sidebar instead.)

**How can I check if the documentation theme is being used anywhere in my site?**

There's no simple way to see a list of spaces using the Documentation theme in Confluence itself, however if you have a very large site, your Confluence Administrator can use the following query to get a list of spaces directly from the database.

```sql
SELECT * 
FROM BANDANA B, SPACES S 
WHERE B.BANDANAKEY='atlassian.confluence.theme.settings' 
  AND S.SPACEKEY=B.BANDANACONTEXT 
  AND B.BANDANAVALUETYPE LIKE ('%documentation%') 
ORDER BY S.SPACENAME;
```

This query will only find spaces that are explicitly using the documentation theme. It doesn't include spaces using the global look and feel (these spaces automatically change when you change the Site Theme, you won't need to change the theme space by space).

**What will happen to my theme customizations during the upgrade?**

During the upgrade we'll automatically turn on the default theme for any spaces that currently use the documentation theme. If you've customized the documentation theme (by adding wiki markup to the sidebar, header or footer) we'll take this wiki markup and drop it into the sidebar, header and footer in the default theme.

The default theme adds some new sections to the sidebar, such as links to pages, blogs and space shortcuts. You can choose to hide these - head to **Space Tools > Configure Sidebar** and use the ![Configure Sidebar](image) button to hide any items you don't want to see.

**Will my space break after the upgrade?**

This depends on the amount of customization you have. In most cases your space sidebar may look a little...
different but the changes shouldn't be dramatic.

If you've used CSS to change the appearance of your space (either in the space stylesheet or by using the Adaptavist Content Formatting macros like `{style}` and `{div}` in the sidebar, header, or footer of the documentation theme), you may need to make a few changes to some class names in your CSS to get your space looking right. For example, if you specified `#splitter-sidebar` in the doc theme, you'll need to use `.acs-side-bar` for the default theme.

If you have customized default theme layouts through the Confluence UI, you may find that your space looks strange or broken when the default theme is re-applied to spaces previously using the documentation theme. If you experience problems, you'll need to reset the broken layouts.

**Reset customized layouts through the UI...**

This method will only work if you have more than one theme available in your site. You'll need System Administrator global permission to do this.

1. Switch to another theme temporarily.
   If you're unable to use the space navigation, use this URL, replacing YOURSPACEKEY with the space key for the space.

   ```
   http://<yoursite>/spaces/choosetheme.action?key=YOURSPACEKEY
   ```

2. In the space administration options go to **Layouts** (if available) or use the following link, replacing YOURSPACEKEY with the space key for the space.

   ```
   http://<yoursite>/spaces/listdecorators.action?key=YOURSPACEKEY
   ```

3. Choose **Reset Default** next to any template that have been customized.
4. Return to the **Themes** page and try applying the default theme again.

Layouts can also be customized for the entire site - head to

> **General Configuration > Layouts** if you need to reset the layout for the entire site.

**Remove customized layouts in the database...**

If you're unable to reset the layouts via the Confluence UI, you can remove the affected layouts directly in the database. Be sure to take a full database backup before you try this.

First, use the following query to identify customized layouts:

```sql
Select *
FROM DECORATOR
ORDER BY SPACEKEY
```

Then, you can selectively remove records for spaces that are affected.

*Can I add custom content to the sidebar, header and footer globally?*

Yes. Head to

> **General Configuration > Sidebar, Header and Footer**. All spaces that use the global look and feel will inherit your custom content. Any custom content added to the sidebar, header and footer in a particular space will override any custom content added globally.

*Can I still use macros in my sidebar, header or footer?*

Yes! If a macro worked correctly in the documentation theme it'll work in the default theme too.

*Where should I add custom content to the sidebar, header or footer?*
You can add custom content to the sidebar, header and footer in each space individually (Space Tools > Look and Feel > Sidebar, Header and Footer) or globally (Space Tools > General Configuration > Sidebar, Header and Footer).

Confluence displays global custom content in all spaces, except where a space has its own custom content defined (space custom content overrides global custom content). This behavior applies field by field, so a space can display a combination of custom content. For example you could define the content of a footer globally, and content of a header in each space individually, or only in some spaces.

**How do I turn off the Pages and Blogs shortcuts at the top of the sidebar?**

Go to Space Tools > Configure Sidebar and use the icons to hide any items you don't want to see.

**Can I edit the default theme’s sidebar globally?**

No. You can add custom content to the sidebar globally, but showing and hiding sections of the sidebar, setting space logos, and adding shortcut links are done on a space by space basis.

**I want to see the page tree, not child pages. how do I do this?**

Head to Space Tools > Configure Sidebar and select Page Tree in the navigation options. The default for all new spaces is Page Tree.

**Where is Space Administration and Space Operations?**

Instead of choosing between Space Operations and Space Administration, the documentation theme has a single Space Tools menu that lets you jump right to Permissions, Content Tools, Look and Feel, or Integrations.

> Here's a handy table of where to find everything in your new theme...

**Do I have to use wiki markup in the sidebar, header, and footer?**

Yes. Our main focus when adding this feature was to help people move from the documentation theme to the default theme with a minimum of effort. Keeping these fields as wiki markup means that your existing customizations can be pasted straight in.

**Can I hide or change the space logo appearance?**

You can upload any image to use as your space logo, but you can't change how it appears in the sidebar (it's
always round and always at the top).

Can I hide the built in page tree and insert my own?

Yes! If you want to have complete control over how the page tree appears in your sidebar you can hide the built in page tree, and then add a Page Tree macro \{pagetree\} in the sidebar custom content.

How can I make my page titles wrap in the sidebar?

Page titles do not wrap in the sidebar of the default theme (regardless of whether you’re using the built in page tree or have added a \{(pagetree)\} macro as custom content). There’s no way to change this.

Can I change the order in which things appear in the sidebar?

You can change the order of some items in the sidebar, such as the shortcuts, but the order of the sections themselves can’t be changed. Anything that has a icon can be moved.

Custom content appears above the page tree. You have the option to hide the built in page tree, and then add it back in the custom content area using wiki markup. This can be useful if you want more control over the order of the page tree and your custom content.

Can I still use the space jump macro?

No, the space jump macro was provided by the documentation theme and will not be available once the documentation theme is removed. If you’ve used this macro on a page or in the header or footer of a space, it will show the following error after the upgrade unknown macro: \{spacejump\}.

To find out whether the Space Jump macro is used on any pages in your site, enter \{macroName:spacejump\} into the search bar. All pages containing the macro will be returned (it won’t search the sidebar, header or footer unfortunately).

Why don't child pages appear below the page?

The default theme does not list child pages below the sidebar, but you can achieve a similar result by adding a Children Display macro to the footer.

Can I restrict search to just this space?

No, that is one of the features we removed with the documentation theme.

One workaround is to add a Livesearch macro to the sidebar or space homepage. Use @self in the spaces parameter to restrict the search to the current space.

How do I view the pages in my space alphabetically?

The default theme does not have an option to view all pages in your space alphabetically.

What will happen if I import a space that uses the documentation theme?

You should have no problems importing the space, but it will have the default theme applied and any wiki markup customization in the theme will not be automatically migrated to the default theme. Before exporting the space you should copy the wiki markup contents of the sidebar, header, and footer fields and keep it so that you can add it back in manually after you've successfully imported your space.

Customize Space Layouts

You can modify Confluence’s look and feel by editing the layout files. This page tells you how to customize the layout files for a space. You’ll need the system administrator global permission plus space administrator permission for that space.

People with system administrator permissions can also customize the layout of the entire Confluence site. For more information, see Customizing Site and Space Layouts. Site layout customizations modify

Related pages:
- Customize your Space
- Apply a Theme to a Space
- Styling Confluence with CSS
the default layout of all spaces in the Confluence site.

Any space layout customizations will override the equivalent site customizations.

If you modify the look and feel of Confluence by following these instructions, you'll need to update your customizations when you upgrade Confluence. The more dramatic the customizations are, the harder it'll be to reapply your changes when upgrading. Please take this into account before proceeding with any customizations.

For more information on updating your customizations, please refer to Upgrading Customized Site and Space Layouts.

Confluence is built on top of the Open Source SiteMesh library, a web-page layout system that provides a consistent look and feel across a site. SiteMesh works through 'decorators' that define a page's layout and structure.

To edit the layout of Confluence, you will need to modify these decorator files. A decorator file is a .vmd file and is written in a very simple programming language called Velocity. Learn more about Velocity. Once you become familiar with Velocity, you can edit the decorator files to personalize the appearance of Confluence.

The decorator files in Confluence are grouped into the following categories:

- **Site layouts**: These are used to define the controls that surround each page in the site. For example, if you want to make changes to the header and the footer, you will need to modify these layouts.

- **Content layouts**: These control the appearance of content such as pages and blog posts. They do not change the way the pages themselves are displayed, but they allow you to alter the way the surrounding comments or attachments are shown.

- **Export layouts**: These control the appearance of spaces and pages when they are exported to HTML. If you are using Confluence to generate a static website, for example, you will need to modify these layouts.

Learn more about using decorators.

To edit a decorator file:

1. Go to the space and choose Space tools > Look and Feel from the bottom of the sidebar
2. Choose Layout (Layout is displayed only if you are a Confluence system administrator.) You'll see a list of the layouts for the space
3. Click Create Custom to edit the default vmd file
   This will open up the vmd file in edit mode. If you only want to view the vmd file, click View Default.
4. Make any changes and click Update
Content Layouts

Content layouts control the appearance of content such as pages and blog posts: they don't change the way the pages themselves are displayed, but they allow you to alter the way the surrounding comments or attachments are shown.

Archive a Space

Archiving a space is useful when you have content that is no longer relevant, but you still want the option of accessing it at a later date. Archived spaces are less visible, but still available on your site. Archiving a space is easy to undo — you can make a space current again at any time.

Archive a space

1. Go to the space and choose **Space tools > Overview** from the bottom of the sidebar
2. Choose **Edit Space Details**.
3. Select ** Archived** in the **Status** dropdown menu.
4. Choose **Save**.

The effect of archiving a space

Spaces

If a space is archived, that space:

- Won't appear in the **Recent spaces** section of the search panel.
- Won't appear in search results, unless you select **Search archived spaces**.
- Won't appear in advanced search results unless you select **Search archived spaces**.
• Won't appear on the **Spaces** dropdown menu.

• Won't appear in the general spaces lists in the **Space Directory**, but will instead appear under the **Archived Spaces** list. It will, however, still appear under any categories it was labeled with.

• Won't show up in activity streams when updated.

• Won't appear on your dashboard.

**Pages**

Pages within an archived space will appear in a few places.

If you **view** a page within an archived space, that page will appear in:

• The **Recently visited** section of the search panel.

• The **Recently viewed pages** menu.

If you **edit** a page within an archived space, that page will appear in:

• Activity streams

• The **Recently updated macro**.

Pages within an archived space won't appear in search results, unless you select **Search archived spaces**.

**These functions remain available for archived spaces:**

• You can view the content as usual, by following a link or typing in a URL belonging to the archived space.

• You can edit the content as usual, as determined by the **space permissions**.

• **RSS feeds, watches and notifications** remain active.

> Archiving a space has no effect on search results of external search engines. For example, a public space will still appear in Google search results.

**Change a space from archived to current**

**Through the space directory:**

1. Go to **Spaces > Space directory** in the header.
2. Choose **Archived Spaces** on the left.
3. Find your space and click the **i** on the right.
4. Choose **Edit Space Details**.
5. Change the **Status** from 'Archived' to 'Current' and hit **Save**.

**Through the archived space:**

1. If you know the **space key**, you can navigate straight to the archived space - [http://yoursite/display/SPACEKEY](http://yoursite/display/SPACEKEY)
2. Choose **Space tools > Overview** from the bottom of the sidebar.
3. Choose **Edit Space Details**.
4. Change the **Status** from 'Archived' to 'Current' and hit **Save**.
Delete a Space

Deleting a space permanently removes the space and all of its contents, including any calendars and questions linked to that space. Only someone with space admin permissions can delete that space.

⚠ Deleting a space is permanent – it does not go to the trash and cannot be undone.

If you're unsure about deleting a space, create an XML export of the space as a backup before proceeding. You can then restore the space from the XML export file if you need to.

To delete a space:

1. Go to the space and choose Space Tools > Overview from the bottom of the sidebar.
2. Choose Delete Space.
3. Choose OK.
Export Content to Word, PDF, HTML and XML

You can export all or part of a Confluence space to various formats, including Microsoft Word, HTML, PDF and XML.

To use the space export functionality, you need the 'Export Space' permission. See the guide to space permissions.

Export single pages to PDF

If you need to send content to people who don't have access to Confluence, you can export a single page or blog post as a PDF.

If you've got permission to view the page in Confluence, you'll be able to export it in this way; go to the page and choose **(Tools) > Export to PDF.**

Only published content is exported. This means you can create PDF exports even while people are still working on the page.

When you export a single page to PDF, the PDF stylesheet customizations are applied, but any PDF layout customizations are not. To make your PDF layout customizations apply to a single page exported to PDF, you'll need to use the 'multiple page' method described below to export the single page. See Customize Exports to PDF.

Export single pages to Word

Members of the confluence-administrators group can also delete spaces, including personal spaces.
You can also choose to export single pages to a .doc file that can be opened in Microsoft Word.

If you've got permission to view the page in Confluence, you'll be able to export it in this way; go to the page and choose **Tools > Export to Word**.

Only published content is exported. This means you can create Word exports even while people are still working on the page. Also, only the first 50 attached images will be included in the export. See the notes below for more information.

Note that due to the format of this file, it can only be opened in Microsoft Word and is not compatible with other applications such as Open Office, Libre Office or Google Docs.

**Export multiple pages to HTML, XML, or PDF**

If you want to export a space – or selected pages in a space – to HTML, XML, or PDF, Confluence can create a zipped archive of the HTML or XML files, or a single, downloadable PDF file.

PDF export is useful you’re producing a printable user manual from your documentation space for example. The HTML export can be used to convert your site content to a static website, and finally the XML export can be used to import your space content into another Confluence space (running the same or later version of Confluence).

**To export pages to HTML, XML, or PDF:**

1. Go to the space and choose **Space tools > Content Tools** from the bottom of the sidebar
2. Choose **Export**
3. Select either **HTML**, **XML**, or **PDF**, then choose **Next**
4. Select the type of export:
   - **Normal Export (HTML and PDF)** – to produce an HTML or PDF file containing all the pages that you have permission to view.
   - **Full Export (XML)** – to produce an XML file containing all the pages in the space, including those that you do not have permission to view.
   - **Custom Export** – if you want to export selected pages only, or if you want to exclude comments from the export.
5. Choose whether to **Include Page Numbers** (PDF only)
6. Choose **Export**.

When the export process has finished, you can download the zipped archive or PDF.

*What’s included in the export?*

The following content is included in space exports.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

**Customizing the appearance of PDF exports**

You can add a title page, table of contents, and customized headers and footers to the PDF output. For more advanced customizations, you can apply Cascading Style Sheet (CSS) modifications. These customizations are specific to each space, and you need the ‘Space Administrator’ permission to apply these customizations. For more information, see **Customize Exports to PDF**.
Notes on PDF exporting

- To export a PDF containing international text, see Create a PDF in Another Language.
- Confluence’s PDF export feature is designed to handle a wide variety of content, but on rare occasions the PDF Export process may fail due to an unrecognized customization. If that happens, the PDF export screen will indicate the title of the page in which the problem occurred, to help you diagnose the cause of the failure.
- Tables that exceed the width of a page, particularly those with images in them, might be cut off in the PDF. See Wide tables are cut off in PDF exports for some suggested workarounds.
- In Confluence Data Center, PDF exports are handled by the external process pool.

Notes on Word exporting

- Only the first 50 images attached to the page are exported to your Word document. This is to prevent out of memory errors affecting your whole Confluence site. See CONFSERVER-3421 for more information, and to find out how you can temporarily increase this limit using a system property.

Notes on HTML exporting

- In the zip file, page attachments are placed in individual folders with names in the following format:
  ...\download\attachments\xxxxxx
  where ‘xxxxxx’ is the page ID of the page containing the attachments.
- To customize the HTML output, you'll need to modify the file confluence-x.y.z-jar/com/atlassian/confluence/pages/Page.htmlexport.vm. To learn how to repackage this file, see How to Edit Files in Confluence JAR Files.

Notes on XML exporting

- You can only import a space into the same or later Confluence version. You can’t import a space into an earlier version.
- Team Calendars aren’t included in XML exports.
- If you’re doing the export for backup purposes, consider another means of backup. See Production Backup Strategy.
- If you are running Confluence behind Apache HTTP Server and are facing timeout errors, please consider creating the export directly from Tomcat, instead of going through Apache. This will speed up the process and prevent timeouts.
- See Restoring a Space for notes on restrictions when importing a space into Confluence Server.

Customize Exports to PDF

Confluence provides a basic PDF export that you can customize and style to suit your needs.

You need Space Admin permissions to customize PDF exports in a space, and Confluence Administrator global permissions to customize PDF exports for the whole site.
How it works

When someone exports a space to PDF, Confluence will apply any layout and styling directions it finds in the current space or set globally for the whole site.

- The PDF Layout allows you to add a title page to your PDF, and add a header and footer to all pages.
- The PDF Stylesheet allows you to change the look of the PDF. You can change just about anything, including the paper size, fonts and colours, spacing, and control behaviours like page breaks.

Both the PDF Layout and PDF Stylesheet can be customized on a space by space basis, or globally for the whole site. Space customizations will always completely override any global customizations. This means you can't mix and match and set some items globally and others at the space level.

Limitations

There are a few limitations to be aware of:

- Changes to the PDF layout only apply to space exports, not to single page exports (via > Export to PDF).
- Confluence Server and Data Center process space exports slightly differently. This means that some options, like adding page numbers via CSS, aren't available in PDFs created with Data Center. We recommend selecting Include page numbers on the export screen if you need to number your pages.
- We provide a number of example customizations to get you started, however Atlassian Support can't help you with styling your PDFs or problems introduced by your customizations. If you're new to CSS, you might want to get help from an Atlassian Solution Partner, or check out a Marketplace app like Scroll PDF Exporter which has a WYSIWYG editor to help you produce beautifully styled PDFs.

Change the PDF layout

The PDF Layout is where you add a title page, header, or footer to your PDF exports. The PDF layout fields accept HTML. You can include inline CSS in the HTML too.

To change the PDF layout for the whole site:
Go to
> **General Configuration** > **PDF Layout**.
You need Confluence Administrator global permissions to do this.
You need
• Choose **Edit**, then add your customizations in the **Title**, **Header**, or **Footer** fields.

To change the PDF layout for a specific space:
• Go to the space and choose **Space tools** > **Look and Feel** from the bottom of the sidebar You'll need **Space Admin permissions** to do this.
• Choose **PDF Layout**.
• Choose **Edit**, then add your customizations in the **Title**, **Header** or **Footer** fields

**PDF Layout examples**

Here are some examples of things you can do in the PDF Layout. The PDF layout can accept HTML and inline CSS.

**Title page**

In this example we've added the title "Documentation for Confluence", a logo, and an additional title "Contents" above the table of contents.

```html
<div class="fsTitlePage">
  <img src="/download/attachments/16918009/atlassian_logo.png" />
  <div class="fsDocTitle">Documentation for Confluence</div>
</div>

<div class="tocTitle">Contents</div>
```

The logo image we've used is attached to a Confluence page in the same site. You can find out the attachment ID by right clicking the image on the page, and copying its location.

**Header or footer**

In this example we've added plain text to the footer with some copyright information, and included a link.

```html
Created in 2018 by Atlassian. Licensed under a <a href="http://creativecommons.org/licenses/by/2.5/au/">Creative Commons Attribution 2.5 Australia License</a>.
```

**Change the PDF stylesheet**

The PDF Stylesheet allows you to change the appearance of your PDF. This includes things like paper size, fonts, colours, spacing, and other styling.

To change the PDF stylesheet for the whole site:

• Go to
  > **General Configuration** > **PDF Stylesheet**.
  You need Confluence Administrator global permissions to do this.
  You need
• Choose **Edit**, then add your CSS.

To change the PDF stylesheet for a specific space:
• Go to the space and choose **Space tools > Look and Feel** from the bottom of the sidebar. You’ll need **Space Admin permissions** to do this.
• Choose **PDF Stylesheet**.
• Choose **Edit**, then add your CSS.

PDF Stylesheet examples

Here are some examples of common CSS overrides that you can use in your PDF Stylesheet. The default CSS rules will apply unless you have specified an override in the PDF Stylesheet.

**Page size**
The default page size is US Letter (8.5 inches wide by 11 inches long). To override this behaviour and specify a particular size, add a `size` property to the CSS `@page` rule.

For example to export your space in A4 size:

```css
@page
{
/*The A4 paper size is 210 mm wide by 297 mm long*/
size: 210mm 297mm;
}
```

**Page orientation**
To change the page orientation of your PDF document, reverse the order of the values declared in the `@page` rule’s `size` property. The first and second values of this property represent the width and height of the page, respectively.

For example, to generate an A4 PDF in landscape, your `@page` rule might look like this:

```css
@page
{
/*A4-sized pages in landscape orientation are 297 mm wide by 210 mm long*/
size: 297mm 210mm;
}
```

**Page margins**
The default margins are 0.5”. To set all margins to 15 mm, with a paper size of A4, edit the CSS `@page` rule in the PDF Stylesheet, like this:

```css
@page
{
size: 210mm 297mm;
margin: 15mm;
}
```

To set the margins independently, edit the `@page` rule like this:
To set margins to include a gutter for binding a printed document, you can use the :left and :right pseudo-classes, as follows:

```css
@page :left
{
  margin-left: 4cm;
  margin-right: 3cm;
}
@page :right
{
  margin-left: 3cm;
  margin-right: 4cm;
}
@page :first
{
  margin-top: 10cm /* Top margin on first page 10cm */
}
```

In the example above we've also used the :first pseudo-class to define different margins for the title page.

**Page breaks**

By default, each Confluence page will start on a new page in the PDF. If you don't want each Confluence page to start on a new page, you can override the default page breaks using the following CSS:

```css
.pagetitle {
  page-break-before: auto;
}
```

This behaviour changed in Confluence 6.13. If you're using Confluence 6.12 or earlier, page breaks are **not** added before each page title.

If you're using Confluence Data Center, you won't be able to change this behavior, as PDFs are generated page by page in the external process pool, and then combined together once all pages are complete.

**Word wrapping**

Long, unbreakable words or strings (such as a URL) will automatically wrap to fit the page width, or cell width if in a table.

If you don't want words or long strings to break you can use the following CSS:
This may mean that the table formatting in your PDF is problematic, and very long content may overflow, and be cut off the page.

**Title page**

If you have added a title page in the PDF layout, you can use the following rules to change the appearance of the title page and title text.

```css
.fsTitlePage {
  margin-left: auto;
  margin-top: 50mm;
  margin-right: auto;
  page-break-after:always
}
.fsTitle {
  font-size: 42px;
  font-weight: bold;
  margin: 72px 0 4px 0;
  text-align:center;
}
```

**Table of contents**

A table of contents is included by default when you export a space to PDF. It will appear at the start of the document, or after the title page, if you've configured a title page in the PDF layout.

To omit the table of contents, use the following override:

```css
div.toc {
  display: none;
}
```

The table of contents uses a leader character to visually connect the page title with its page number. By default this is a dot. Allowed values are dotted, solid and space. You can also use a string, for example leader(".
```

```
span.toclead:before {
  content: leader(solid);
}
```

**Tables**
When you export a page that contains a table, we'll reduce the width of the table columns as much as possible, so that the whole table fits comfortably on the page. Individual columns are resized to fit the contents of each column.

If you prefer table columns to always be of equal width, you can use the following CSS:

```css
table.fixedTableLayout {
    table-layout: fixed !important;
    width: 98% !important;
}
```

Any images in a table will be exported using the size set in the editor. If your table contains large images, part of the table may be cut off when exported to PDF. To ensure that nothing is cut off, we recommend resizing images in the editor, so that the total width does not exceed about 600px (for an A4 page in portrait orientation).

Alternatively you can use the following CSS to fit images to the available width:

```css
table img.confluence-embedded-image {
    -fs-fit-images-to-width: 100% !important;
}
```

**Page numbers**

The best way to add page numbers to your document is to select Include page numbers on the export screen. If you're using Confluence Server, and want more control over where page numbers appear, you can use CSS to add numbers instead.

If you're using Confluence Data Center, you can't add page numbers using these methods, as PDFs are generated page by page in the external process pool, and then combined together once all pages are complete. Use the Include page numbers option on the export screen instead.

To add page numbers in the format "Page x of y" to the bottom of your page, add the following CSS to the PDF stylesheet:

```css
@page {
    @bottom-center {
        content: "Page " counter(page) " of " counter(pages);
        font-family: ConfluenceInstalledFont, Helvetica, Arial,
        sans-serif;
        font-size: 8pt;
    }
}
```

Alternatively you can add page numbers into the footer. This requires making a change in the PDF layout and the stylesheet.

First, add an element in the PDF layout. In this example we'll call it `pageNum`:

```html
<span id="pageNum"/>
```
Then, in the PDF stylesheet, style the `pageNum` element as follows:

```
#pageNum:before
{
  content: counter(page);
}
```

**Headings**

Heading sizes in the PDF export roughly match the sizes used on Confluence pages. You can easily override them as follows:

```
h1 {
  /* Custom styling */
}
```

```
h2 {
  /* Custom styling */
}
```

This behaviour changed in Confluence 6.13. In Confluence 6.12 and earlier, headings were demoted based on the position of the page in the page tree. Now headings are a consistent size on every page.

**Other formatting**

You can use the stylesheet to customize the output of just about anything on the page, including fonts, tables, line spacing, macros, etc. The export engine works directly from the HTML output produced by Confluence. Therefore, the first step in customizing something is to find a selector for the HTML element produced by Confluence or the Confluence macro. Then add a CSS rule to the PDF stylesheet.

**Advanced PDF Export Customizations**

This page provides information about ‘advanced’ PDF export customizations. These expand upon the regular customizations described in Customize Exports to PDF.

⚠️ The information below is for advanced users. Be aware that the advanced customizations described below require knowledge of certain parts of Confluence, and of CSS and HTML. Customizations are not supported by Atlassian, so our support engineers won’t be able to help you with these modifications.

**On this page:**
- Header and Footer
  - Adding Headers and Footers to Single Page Exports
  - Adding Images to Headers and Footers
- Incorporating Other Fonts
- Adding a Dynamic Title to the Title Page
- Hiding Text from the PDF Output
- Indexing
- Notes

**Related pages:**

**Header and Footer**

Adding Headers and Footers to Single Page Exports
Single page exports don’t support adding HTML headers and footers via the PDF Layout page, but you can use CSS rules in the PDF Stylesheet page (Space tools > Look and Feel > PDF Stylesheet) to produce headers and/or footers for a single page export.

For custom headers, define any of the following rules within your @page rule: @top-left, @top-center, and @top-right. These rules allow you to define the content of the left-hand side, centre and right-hand side of your page’s header area, respectively.

For custom footers, define @bottom-left, @bottom-center and @bottom-right rules within your @page rule.

For example, the following rules add a document title at the centre of the header and a page number at the centre of the footer:

```css
@page
{
    @top-center
    {
        content: "Document Title Goes Here"; /* This is the content that will appear in the header */
        font-family: ConfluenceInstalledFont, Helvetica, Arial, sans-serif;
        font-size: 8pt;
    }
    @bottom-center
    {
        content: "Page " counter(page); /* This is the content that will appear in the footer */
        font-family: ConfluenceInstalledFont, Helvetica, Arial, sans-serif;
        font-size: 8pt;
    }
    /* Any other page-specific rules */
}
```

Notes:

- The `font-family` and `font-size` properties ensure that the header and footer text is rendered in the same default font style used for the body text, based on the default CSS rules.
- It is not possible to use this method to insert images (stored as attachments within your Confluence instance) into the headers and footers of single page exports.

**Adding Images to Headers and Footers**

To insert an image into the header or footer, add HTML to the Header or Footer section of the PDF Layout screen.

The following example uses an HTML `img` element with `src` attribute to add an image to the left of the header. The `src` attribute refers to an image attached to a Confluence page. The image element is usually placed within a `div` element container.
**HTML - PDF Layout: Header Section**

```
<div style="margin-top: 10.0mm;"> 
<img 
src="https://confluence.atlassian.com/download/attachments/12346/header-image.png" />
</div>
```

In the example above, the header includes an image called 'header-image.png'. The "12346" in the src attribute is the ID number of the page to which the image is attached.

**Follow these instructions to include an image on your page:**

1. Attach the image to a Confluence page.
2. View the list of attachments on that page, then right-click the image and copy its location.
3. Paste the link into the appropriate src="" attribute in your PDF Stylesheet, as shown above.
4. Edit the image URL so that it is relative, by removing the first part of the URL before /download/....

**Notes:**

- This example uses an inline CSS property margin-top in the style attribute to force the image away from the top of the page by 10mm. This comes in handy when your header image is large enough to touch or spill over the top of the page.
- Likewise, for footers, you can use the margin-bottom:XXmm property to force an image away from the bottom of the page by 'XX' mm.
- Very large images can spill over into the body of a page or alter the position of text or other elements used within a header or footer. In such situations, it is recommended that you reduce the size of the image and then attach it to your Confluence page again. If you prefer to keep the image size and want to move the content lower instead, you can do so by configuring the margin-top properties in the @page CSS rule.
- By default, a header or footer image is aligned to the left-hand side of the page. However, you can align this image to the centre or right-hand side of a page by adding either the text-align:center or text-align:right properties to your style attribute. For example, to align the header image to the right-hand side of the page, your style attribute would look similar to this: style="margin-top:10mm; text-align:right".

**Incorporating Other Fonts**

By default, Confluence provides Times New Roman, Helvetica or Courier fonts for use in PDF exports. You can use your own fonts for PDF exports by declaring them in a @font-face CSS rule in your PDF Stylesheet.

The following CSS rule example shows how to declare the Consolas font and apply it to some elements for your PDF export:

```
@font-face { src: url(file:///usr/share/fonts/Consolas.ttf); -fs-pdf-font-embed: embed; } .code pre, .preformatted pre, tt, kbd, code, samp { font-family: Consolas, monospace; font-size: 9pt; }
```

The font path specified in the CSS must be the path to the font on the Confluence server.

**Adding a Dynamic Title to the Title Page**

When you export an arbitrary set of pages from Confluence, you may like to have a corresponding title added to the cover (or title) page automatically. This can be done (in a somewhat irregular way) by using the top level item from the default table of contents as the title. This method relies on having the exported pages
structured as sub-pages of the top-level page. In other words, the pages to be exported should consist of a page (at the top-level) and all of its child pages. The result is that the title that appears on the cover page changes depending on the top-level page that is used for the export.

The CSS below moves, and styles, the top-level TOC item for use as the title on the cover page, and turns off the leader and page number normally associated with this item in the TOC.

```
CSS - PDF Stylesheet
.fsTitlePage { position:relative; left:0px; } /* Turn off the default section numbering for this TOC item */
.toclvl0:before { content: &quot;&quot;; counter-reset: chapter 0; } /* Hide the default page numbering for this TOC item */
.toclvl0 .tocnum { display: none; } /* Move and style this TOC item */
toclvl0 { position:absolute; top:250px; font-size: 42px; font-weight: bold; margin: 72px 0 4px 0; text-align:center; }
```

Hiding Text from the PDF Output

This section describes a way to hide text from your PDF export. In other words, you can have text on the Confluence page that will not appear in the PDF export.

There are three steps:

1. Follow the instructions to define the NoPrint user macro.
2. Use the NoPrint macro to mark some text on a Confluence page.
3. Add the following CSS to your PDF stylesheet to make the PDF export recognize the NoPrint macro:

```
CSS - PDF Stylesheet
.noprint { display: none ; }
```

Indexing

To obtain an index at the end of the exported PDF file, consider using the Scroll Wiki PDF Exporter plugin that is produced by K15t Software GmbH.

Notes

If styling is not working as expected, it is useful to look at the intermediary HTML source to which the CSS is applied. This intermediary HTML is created whenever you create an HTML export that contains multiple pages, and is stored in the temp directory in Confluence’s home directory. For example:

```
/temp/htmlexport-20110308-154047-1/export-intermediate-154047-2.html
```

Create a PDF in Another Language

To export a Confluence page written in a language other than English, you’ll need the necessary font for that language.

Upload a Font File to Confluence

1. Find the appropriate font file:
   - Windows users: All font files in Windows are stored in a directory called:
C:\WINDOWS\Fonts

- **Unix users**: All font files in Unix are stored in:

  /usr/share/fonts

- Microsoft True Type core fonts such as Verdana can be downloaded from this page: [http://corefonts.sourceforge.net/](http://corefonts.sourceforge.net/)

  1. Copy the font file into a temporary folder, for example a folder on your desktop.
  2. Choose the **cog icon**, then choose **General Configuration** then choose **PDF Export Language Support**.
  3. Upload the file you copied in step 2.
  4. Choose **Install**.

**Notes**

- The only font files supported are **true type fonts** and **true type collections**. The accepted file extensions are *.ttf* and *.ttc*.
- Confluence can only store **one** font file at any one time. Please **create a collection** to install more than one *.ttf* files.
- We recommend that you use Unicode font Verdana for correct character encoding and exporting to PDF.
- For symbols, if the other fonts do not work, try Seguisym
- If the font file size is bigger than your **current attachment size limit**, you will not be able to upload it. Please increase the **attachment size limit** temporarily and re-upload again. An improvement of the error messaging is tracked at [CONFSERVER-24706](https://issues.atlassian.com/browse/CONFSERVER-24706)
- To make use of an installed font in your **PDF Export style sheet (CSS)** refer to it by the font-family ConfluenceInstalledFont.

### Pages and blogs

Pages and blog posts allow you to capture and share information in Confluence.

Whether it’s taking down some quick **notes from a meeting**, writing a **require ments page**, or letting your teammates know about the company’s latest marketing push – you can create it as a Confluence page or blog post.

**Pages** are great for when you want the information to last and evolve over time. If it’s a point-in-time update or one-time communication then a **blog post** is the way to go. These aren’t hard-and-fast rules; they’re just pointers to give you a place to start.

Each Confluence space, including your personal space, allows you to create pages in it, and has its own blog where you can create posts. If you’re not sure what a space is, or what you can do with spaces, check out our page on **Spaces**.

Take a look at the below pages to learn more about pages and blog posts in Confluence.

- **Create and Edit Pages**
- **Blog Posts**
- **The Editor**
- **Move and Reorder Pages**
- **Copy a Page**
- **Delete or Restore a Page**
- **Add, Remove and Search for Labels**

**Related pages:**

- Delete or Restore a Page
- Spaces
Create and Edit Pages

Create a page

You can create a page from anywhere in Confluence; just choose Create in the header and you're ready to go. Pages are the place to capture all your important (and unimportant) information; start with a blank page and add rich text, tasks, images, macros and links, or use one of the useful blueprints to capture meeting notes, decisions, and more.

If you want to quickly create a blank page, hit the Create button in the header; if you want to create a page from a template, hit the Create from template button.

1. Create blank page
2. Create from template
1. **Select space**: choose the space where you'll create the content.
2. **Page templates**: create a page from a template or create other types of content.
3. **Parent page**: your page will be a child of this page.

Once you decide on a blank page or blueprint, you'll be taken straight into the Confluence editor. The editor is where you'll name or rename your page, add the content, and format it to look great. When you've added some content, choose Preview to take a peek at what your finished page will look like, and Publish when you're ready to make it appear in the space.

After you save you'll see the page in 'view' mode. You can re-enter the editor any time by choosing Edit or pressing E on your keyboard.

1. **Confluence header**: create blank pages, pages from templates and visit spaces or your profile.
2. **Space sidebar**: access pages, blogs and administer the space.
3. **Page tools**: edit or share the page, watch it to get updates and perform more actions.

Another useful way to create a page is to use the Create from Template Macro. This macro allows you to choose a page template, and adds a button to the page allowing one-click page creation. If you want others to create pages using this template, this is a great option.

**Edit together**

Need input from your team members? Multiple people can edit your page at the same time.

Hit the Invite button in the editor and either grab the link, or enter some people or groups to invite by email (t
hey need the appropriate Confluence and space permissions of course). See Collaborative editing for all the ins and outs.

Collaborate or restrict

Once you've created a page, you can decide if you want to keep it private, using restrictions, or collaborate on it with others using @mentions, sharing, and comments.

Organize and move

You can also organize pages in a hierarchy, with child and/or parent pages for closely related content. When you navigate to a Confluence page and choose the Create button in the header, the page you're creating will by default be a child of the page you're viewing. Have as many child pages and levels in the hierarchy as you need to, and move pages if you want to change their location.

If you want to view all pages in a Confluence space, choose Pages in the sidebar.

Each time you create a page, you're creating it in a space. Spaces are containers used to contain pages with related content, so you can set them up for each team in your organization, for projects, a combination of both, or for any reason you want to group pages together. See Spaces for more information.

Other page actions

- Copy a page and its child pages
- Delete a page or remove a specific version of a page
- Monitor page updates and other activity through page notifications
- View page history, and manage and compare versions of a page
- Search page content, including attachments
- Export pages to Word, PDF, HTML or XML
- Like a page

⚠️ We recommend you don't use special characters in page or attachment names, as the page or attachment may not be found by Confluence search, and may cause some Confluence functions to behave unexpectedly.

If you rename a page, Confluence will automatically update all relative links to the page, except in some macros. Links from external sites will be broken, unless they use the permanent URL. See Working with Links for more information.

Notes

You may experience problems saving extremely large pages. Confluence can accept approximately 5mb of content (not including attached files) which is roughly equivalent to 800,000 words. If you do experience errors that indicate the page is too large to save, you should break up the page into several smaller pages.

Blog Posts

Blog posts are an easy way to share announcements, journal entries, status reports, or any other timely information. Others can join in by commenting on and/or liking your blog post and, if you get enough of either, your post might make it to the popular feed on the dashboard!

Each space in Confluence, including your personal space, has its own blog. To view a space's blog, go to a space and choose Blog in the sidebar. You'll see a list of the latest blog posts, and you can click through to earlier posts via the navigation area in the sidebar.
Create a blog post

You can follow the same process to create a blog post as when you create a Confluence page.

1. Navigate to the space where you want to create your blog post
2. Choose Create in the Confluence header and select Blog post
3. Add your content and choose Publish

You can create blog posts from the Dashboard, but you'll need to make sure you choose the space it's going to appear in in the create dialog.

Blog posts can be attractive and engaging in the same way a page can be, so go ahead and add images, YouTube clips (preferably of cats), and tables to your post to really grab your audience.

To create a blog post, you need the 'Add Blog' permission. See Space Permissions.

Move a blog post

If you create a blog post in the wrong space, or want to reorganize your spaces, you can move an individual blog post to another space.

To move a blog post, go to the post and choose

***

> Move and select the new destination space.

You'll need the 'Delete blog' permission in the current space, and 'Add blog' permission in the new (destination) space to do this.

Restrict a blog post

You can restrict a blog post so that it is only available to specific users or groups. Blog post restrictions work in the same way as page restrictions.

To restrict a blog post prior to publishing it, choose the Unrestricted button in the footer and apply your restrictions. To restrict a blog post after publishing, choose

***

> Restrictions and apply your restrictions.

Notes:

- Notifications are sent at the point a blog post is created - removing restrictions does not trigger a new
notification.

- As a blog post has no parent, restrictions aren't inherited.

Delete a blog post

To delete a blog post, choose

> **Delete**. Deleting a blog post follows the same rules as deleting a page.

Export a blog post

You can export individual blog posts to PDF. This is useful, for example, if you want to email an internal blog post to people outside your organization.

See [Export Content to Word, PDF, HTML and XML](#) for more information on exporting blog pages to PDF.

The Editor

The Confluence editor is what you'll use to create and edit Confluence pages, blog posts, and comments. You can enter content as you would in a Word document, apply formatting, and embed other content and files on the page.

**Note:** To edit a page, you need the 'Add Pages' permission for the space. See [space permissions](#). Someone may also apply [page restrictions](#) that prevent you from editing the page.

Edit a page or blog post

You'll be taken to the editor whenever you create a new page or blog post, or add a comment. To edit an existing page or blog post, choose **Edit** at the top of a page or press **E** on your keyboard.

Confluence automatically saves changes as you type. Changes are only visible when viewing the page after you publish or update. See [Collaborative editing](#) for more information on how this works.
The editor

The editor allows you to enter or change the title of your page; insert content including text, images, and links; and format your content using the toolbar.

If you're renaming your page, there are some things you should take into account.
1. **Page content**: add your page title and body text.
2. **Page tools**: add labels or restrict the page.
3. **Insert**: add files, links, images, tables and macros.
4. **Notify**: notify others and leave a comment when you change a page.
5. **Preview or revert**: preview your page, view changes since last published, or revert back to last published version (or delete the draft page, if it has never been published).

**Editor toolbar**

The editor toolbar is where you format your page layout and text, and add links, tables, images, attachments and macros. You can also perform a **find and replace**, or get help using the editor by choosing the help icon빠.!
The Insert menu

The **Insert** menu is particularly useful. Use the **Insert** menu to include any of the following content types on your page:

- An **image**
- A link to another Confluence page or external URL, or a link to an attachment or image
- An **emoticon or symbol**, or a horizontal line
- A **macro** (choose a specific macro, or **Other Macros**, from the **Insert** menu)

You can also use keyboard shortcuts to insert links, images, and macros. Try out the shortcuts listed below:

- Type `[` (square bracket) to insert a link.
- Type `!` (exclamation mark) to insert an image or other media.
- Type `{` (curly bracket) to insert a macro.

Typing any of the above shortcuts will trigger the autocomplete functionality, prompting you with a list of suggestions to finish off the entry. For more shortcuts, click the help icon on the editor toolbar.

Restrictions, labels, and notifications

When editing a page, you may want to set **restrictions** on who can view or edit the page, or add **labels** to the page to make it easily searchable.

Once you're ready to save, you can enter **change comments** to let others know what you've changed, and, if you like, **send an email notification** to anyone watching the page.

Things to help you work faster

**Auto-formatting**

You can type **Confluence wiki markup** directly into the editor to have Confluence auto-format your text as you type. To learn more, choose help icon in the toolbar, then choose **Editor Autoformatting**.

**Autoconvert for pasted links**

When you paste certain URLs into Confluence, the editor will analyze what you’re pasting and automatically convert it into something that will display well in Confluence. Examples include:

- YouTube videos
- Jira issue queries
- Google Maps
- Confluence pages, blog posts, comments, user statuses, user profiles.
- Shared screenshot links from Skitch
- And more.

**Drag-and-drop for external images and files**

You can drag files, like images, multimedia, Office files and PDFs, from your computer and drop them directly into the editor. The contents of the file will be embedded into the page or blog post.

**Drag-and-drop within the editor**

In the editor panel, you can drag an image or a macro from one location to another on the page. Hover your cursor over the image or the macro placeholder and your cursor changes to a drag-and-drop icon. Click the image or macro and drag it to a new location.
Keyboard shortcuts

To view the available keyboard shortcuts, choose the help icon ? in the editor toolbar.

Find and replace text

Click the icon on the toolbar, or use the keyboard shortcut Ctrl+F (Windows) or Cmd+F (Mac OS).

Search matches are highlighted in yellow. You can step through the results one by one, replace the matching text strings one by one, or replace all matching strings at once. Find and replace works only within the current page.

Invite people to edit with you

Speed up your draft and review cycles and get input from the right people by inviting them to edit the page with you. The page does not need to be published.

Hit the button in the editor and either grab the link, or add people, groups or email addresses to invite, just like sharing a page.

Sharing or inviting someone to edit a page or blog post does not automatically grant any permissions - they will still need the appropriate Confluence permissions to access Confluence and view or edit the page.

Up to 12 people can edit the same page at the same time (your administrator can change this limit).

Record change comments and notify watchers

When you finish editing a page, you can add a comment to let others know what you changed. Type a short message in the change comments field in the footer. The comment will be visible in the page history.

If you want to send a notification to people watching the page, select Notify watchers. The change comment will be included in the notification email.

The Notify watchers checkbox remembers your last selection for each page, so if you choose not to notify people, the checkbox will be deselected for you next time you edit that page.

Symbols, Emoticons and Special Characters

You can add various symbols and special characters to Confluence pages. You can also use them in other places that display content, such as blog posts, comments, and the dashboard welcome message.

Insert symbols and special characters

1. Edit the page (if you're viewing the page, press E on your keyboard)
2. Choose Insert > Symbol
3. Choose a symbol to insert it
There are two ways to add an emoticon, or smiley, to your page.

**By choosing an emoticon from those available:**

1. Choose **Insert > Emoticon**
2. Choose an emoticon to insert it

**By typing a character combination:**

You can also type the following characters to insert emoticons. This can be useful when the Insert menu is not available, for example in an inline comment.
Prevent emoticons from appearing

To undo the conversion of a character combination into an emoticon, press Ctrl+Z (Windows) or Cmd+Z (Mac).

To prevent Confluence from converting text to emoticons automatically, disable 'Autoformatting' in your user profile. See Edit Your User Settings.

Collaborative editing

Collaborative editing takes teamwork to the next level by letting you and your team work together in real time on software requirements, meeting notes, retros, and any other Confluence page. See who’s editing the page with you, and see changes as they happen. Hit + to invite more people to edit with you.

Changes save and sync automatically, so everyone editing sees the same thing. And, because we’re saving all the time, there’s no need to manually save. Publish now or keep the draft and publish it later—you’re in control.

Up to 12 people can edit the same page at the same time. Your administrator can change this limit using a system property.

Once you and your team are done editing you can:
• **publish** (or update if the page has previously been published) to make everyone’s changes visible
• close the editor and **keep** everyone’s work to finish later
• **revert** to the published version of the page, discarding everyone’s unpublished changes
• **delete** the draft page entirely, if it has never been published.

We’ll warn you if you’re about to publish (or discard) other peoples’ changes along with your own.

1. **Invite more people**: see who is editing the page and invite others to edit with you.
2. **See what they’re doing**: watch others edit the page in real time.

**Drafts and unpublished changes**

**What is a draft?**

A draft is a page that has **never** been published before. Draft pages have a lozenge that says **draft**, and are only visible to their author, and to anyone that author shares their draft with. Nobody else will be able to see your draft, as it is only accessible from the **Recently worked on** list of each of the people who’ve contributed to it.

**What are unpublished changes?**

A page with **unpublished changes** is a page that has been published, and has then had edits made to it, but which has not yet been republished. Anyone who has unpublished edits will see the page in their **Recently worked on** list, with a lozenge saying **unpublished changes**. People who haven’t contributed to the unpublished changes won’t see this lozenge.

Those unpublished changes, however, are visible in the editor, and anyone can access them by editing that page. Therefore, if you have unpublished changes and do not want someone else making additional changes before they can be published, you might want to temporarily restrict editing on that page (leaving the published version of the page visible).
Things you should know

**Limited content auditing**

We don’t yet have the same auditing capabilities with collaborative editing. All page changes are currently attributed to the person that publishes the page, rather than the person who made each specific change.

**Changes in drafts aren’t versioned**

We’re saving all the time in collaborative editing, but we don’t save versions in a draft. When restoring an earlier page version, you can only roll back to published versions (the page draft is deleted when you restore a previous version).

**No more personal drafts**

Collaborative editing introduces a new type of draft, a *shared* draft. Previously, when you edited a page but didn’t save it, Confluence would create a draft that was only visible to you (a personal draft). Now, Confluence creates a shared draft whenever anyone edits a page. All page editors work on this same shared draft, and it exists until someone publishes the page.

When you publish a shared draft, you’re publishing all the changes you have made and changes made by others. Publishing creates a version in the page history.

If you discard a shared draft, you’re discarding all changes, including changes made by others. Because shared drafts aren’t versioned, there’s no way to get a discarded draft back.

Any existing personal drafts are still available, but are no longer editable. If you edit a page, you’ll see the shared draft of the page, not your personal draft (if one exists).

If you need to get content out of your previous personal drafts head to Profile > Drafts, locate your page and copy the contents.

**Move and Reorder Pages**

The easiest way to set a page's location in Confluence is to navigate to the space where you want the page to live and, if necessary, find its parent page and choose Create. Sometimes though, you’ll want to change a page’s location either while you’re creating it, or after it’s been created.

You can also move and reorder pages in the page tree (hierarchy).
Set page location or move a page

1. Do either of the following:
   - **While creating a page** – choose the location icon at the top of the page
   - **Once a page is created** – choose

2. Use the tabs on the left of the 'Set Page Location' dialog to help you find the new space and/or parent page for your page (the Current location and New location breadcrumbs at the bottom of the dialog indicate the current parent page and new parent page)
3. Select **Reorder** if you want to move the page to a different position amongst the child pages (when you choose Move in the next step, you’ll be able to reorder the page)
4. Choose **Move** (If you’re reordering the child pages, choose the new position for the page and choose Reorder)

On this page:
- Set page location or move a page
- Reorder pages within a space
- Notes about permissions

Related pages:
- Create and Edit Pages
- Copy a Page
- Delete or Restore a Page
- Orphaned Pages

The page – along with any attachments, comments, and child pages – is moved to your chosen location. Confluence will automatically adjust all links to the moved pages, to point to the page(s) in its new location.

When completing the New parent page field, you need to select the page suggested by Confluence’s autocomplete. Typing or pasting the page name (or using your browser’s autocomplete) won’t work.

Screenshot: Setting the location or moving a page

Reorder pages within a space

You can change the location of a page within its space, and reorder pages in the hierarchy. This allows you to:
• Move a single page, or a family of pages, to a different parent within the space.
• Reorder pages that are children of the same parent.

All links to the page are maintained. When you move a parent page, the entire hierarchy of child pages will move too.

To move or reorder a page:

1. Go to the space and choose **Space tools > Reorder pages** from the bottom of the sidebar
2. Expand the branches to locate the page you want to move.
3. Drag the page to a new position in the tree.

Alternatively, you can choose to order a group of child pages alphabetically by choosing the **Sort Alphabetically (A-Z)** icon. The **Sort Alphabetically (A-Z)** icon only appears next to the parent page if the page family is currently sorted manually.

If you change your mind, you can use the **Undo Sorting** icon to revert back to the previous manual page order. This option is only available immediately after sorting the page, while you're still on the **Reorder Pages** tab, and haven't performed any other action.

1. **Alphabetical**: sort all child pages alphabetically.
2. **Undo**: undo sorting.

Notes about permissions

To move a page, you need the following permissions:

• ‘Add’ permission on the page you’re moving, and
• ‘View’ permission on the page’s parent page. If you’re moving the page to a different parent, you need ‘View’ permission on the new parent.

To move a page into a different space, you also need:

• ‘Delete’ permission on the space you’re moving from, and
• ‘Add’ permission on the space you’re moving to.

If the page has restrictions, and you want to keep the page restrictions in the new location, you’ll also need ‘Restrict’ permission on the space you’re moving to. Alternatively, remove the page restrictions before performing the move.

Copy a Page

If you need to duplicate the contents of a page, the easiest way is to copy the page. You can copy pages into the same space or to a different space.

When you copy pages into the same space, you’ll need to rename them, as two pages with the same name can’t live in the same space. We give you some handy tools to help rename your pages during the copy process.

ℹ️ You need the ‘Create Page’ permission to copy pages. See **space permissions** for more information.
Copy pages

To copy a single page:

1. Go to the page and choose
   ***
   > Copy.
2. Choose a Location for the new page.
3. Hit Copy.

Confluence will open the copy of the page in the editor and name it 'Copy of [original page title]'. You can then rename the page and work in the editor like any ordinary page.

To copy a page and all its child pages:

1. Go to the page and choose
   ***
   > Copy.
2. Choose a Location for the new pages.
3. Select Include child pages.
4. Use the options provided to customize your new page titles.
   You can add a prefix, replace a keyword or phrase in existing titles, or both. The preview will give you a good idea of what your new page hierarchy will look like, and warn you if there are any problems.
5. Deselect any items you do not want to copy over (attached files, labels, restrictions)
6. Hit Copy.

You'll find a link to your newly copied pages in the copy complete message.

⚠️ Note: It's not possible to selectively copy multiple pages. You will be copying the entire hierarchy.

What's included when you copy a page?

Here's some more info on what's included when you copy a page.

<table>
<thead>
<tr>
<th></th>
<th>Single page</th>
<th>Page and its child pages</th>
</tr>
</thead>
<tbody>
<tr>
<td>Page contents (text, macros)</td>
<td>Yes</td>
<td>Yes</td>
</tr>
<tr>
<td>Attached files and images</td>
<td>Yes</td>
<td>Optional - if you choose not to include attachments, you may see 'unknown-attachment' errors on the copied pages.</td>
</tr>
<tr>
<td>Comments</td>
<td>No</td>
<td>No</td>
</tr>
<tr>
<td>Labels</td>
<td>Yes</td>
<td>Optional</td>
</tr>
<tr>
<td>Restrictions</td>
<td>No</td>
<td>Optional - you may not be able to change this option if you don't have appropriate 'Restrict' space permissions.</td>
</tr>
<tr>
<td>Watchers</td>
<td>No</td>
<td>No</td>
</tr>
<tr>
<td>Saved for later info</td>
<td>No</td>
<td>No</td>
</tr>
<tr>
<td>History</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>
Child pages with view restrictions | - | Yes - if you have permission to see the child pages.  
| | No - if you do not have permission to see the child pages.  

Space permissions and page restrictions

Your space permissions and any existing page restrictions have an impact on what you can copy:

- To copy pages you need the 'Create' page permission in the destination space.
- To copy pages with restrictions intact, you need the 'Restrict' page permission in the destination space.

When copying a page and its child pages, you also have a choice to copy over any existing page restrictions. This is useful if you need to maintain the current view or edit restrictions. If you don't have 'Restrict' page permission in the destination space, you won't be able to choose this option.

Copy the contents of an entire space

Confluence does not provide an option to copy a space, however if your space has less than 1000 pages, you can use copy page to copy all the pages in an existing space to a new space.

**To copy the contents of a space to a new space:**

1. Create a new space.
2. Go to the homepage of the space you want to copy, and choose ***
   > Copy.
3. Set your new space as the Location.
4. Select Copy child pages then hit Copy.
5. In the new space, go to Space Tools > Reorder pages and drag your copied homepage to the root of the space (so it is no longer a child of the current space homepage).
6. Go to Space tools > Overview > Edit space details.
7. Enter the copied space homepage title in the Home page field and Save.

That's it. You can now delete the homepage that was automatically added when you created the space.

Note that this is a new space, and no space settings (permissions, color schemes, templates etc) will be copied. See these instructions on copying a space for some other workarounds.

Delete or Restore a Page

When you delete a Confluence page, we'll move it to the space's trash. It's not permanently deleted, and can be restored by a space admin, until the page is permanently deleted from the trash.

**Don't see a delete option?** Delete only appears if you are allowed to delete the page. Both space permissions and page restrictions can prevent you from deleting.

Delete a single page

When you delete a page in Confluence, you're deleting its page history too. If you only want to delete a specific version of a page, take a look at the instructions below for deleting a specific version.

**To delete a page:**

1. Go to the page and choose ***
   > Delete.
2. We'll warn you of any issues, such as incoming links that will break. Choose Delete to proceed.
The page will be sent to the trash, where it can be restored by a space admin.

Any child pages (including any restricted pages that you are not allowed to see) will move up to the nearest parent page.

On this page:
- Delete a single page
- Delete a page hierarchy
- Delete an unpublished page
- Delete a page version
- Restore deleted pages
- Empty the trash or permanently delete a page

Related pages:
- Cannot edit page: Editing or Deleting a Page That Won't Render
- Copy a Page

Delete a page hierarchy

When deleting a page that has child pages you have the option to delete the entire page hierarchy.

To delete a page hierarchy:

1. Navigate to the parent page and choose
   > Delete.
2. Choose Also delete child pages then hit Next.
3. We'll warn you of any issues, such as incoming links that will break. Choose Delete to proceed.

The pages will be sent to the trash, where they can be restored by a space admin.

Any pages that are restricted (that you are not allowed to see or delete) will not be deleted and will move up to the nearest parent page.

Delete an unpublished page

To delete a page that has never been published (a draft), in the editor go to

> Delete unpublished page.

Deleted drafts are not sent to the trash, so cannot be restored. If other people have contributed to the draft, you will be deleting their work as well as your own.

Delete a page version
Space admins can delete specific versions from the page history. This is useful if you need to prevent older versions of a page being restored in future. Deleting a page version is permanent and cannot be undone.

To delete a specific version of a page:

1. Go to the page and choose
   ***
   > Page History
2. Choose Delete next to the version you want to delete.

Once you've deleted a version, the other versions are re-numbered where necessary.

Restore deleted pages

If you're a space admin you can restore deleted pages back into a space. This is useful if someone accidentally deletes a page and needs to get it back.

To restore a deleted page:

1. Go to the space and choose Space tools > Content Tools from the bottom of the sidebar
2. Choose Trash.
3. Choose
   ***
   > Restore next to the page you wish to restore.

Pages are restored to the root of the space. Head to Space Tools > Reorder Pages to drag your restored page back into the page hierarchy.

Empty the trash or permanently delete a page

If you're a space admin you can permanently delete a page (and all its attached files) by purging it from the trash. Once purged, the page and all its versions and attached files will be gone for good.

To purge deleted pages:

1. Go to the space and choose Space tools > Content Tools from the bottom of the sidebar
2. Choose Trash.
3. Choose
   ***
   > Purge next to a specific page or you can Purge all to completely empty the trash.

Add, Remove and Search for Labels

Labels are key words or tags that you can add to pages, blog posts and attachments. You can define your own labels and use them to categorize, identify or bookmark content in Confluence.

For example, you could assign the label ‘accounting’ to all accounts-related pages on your site. You can then browse all pages with that label in a single space or across the site, display a list of pages with that label, or search based on the label.

Because labels are user-defined, you can add any word that helps you identify the content in your site.

You can also apply labels (known as categories) to spaces, to help organize your Confluence spaces. See Use Labels to Categorize Spaces.

Label a page or blog post

Any user with permission to edit a page can add labels to it. Any existing labels appear at the bottom-right of the page, below the page content.

To add a label to a page or blog post:
1. At the bottom of the page, choose **Edit labels**
   or hit L on your keyboard
2. Type in a new label (existing labels are suggested as you type)
3. Choose **Add**

If you're editing or creating a page, and you want to add labels, choose the **Edit label** icon
at the top of the page.

Label an attachment

1. Do either of the following:
- Go to the page that contains the attachment and choose Go to
  
  > Attachments

- Go to the space and choose Space tools > Content Tools from the bottom of the sidebar, then choose Attachments

You'll see a list of attachments, with any existing labels listed in the Labels column.

2. Choose the Edit label icon beside the list of labels and type in a new label (existing labels are suggested as you type)

3. Choose Add

You can also add labels in a list of attachments displayed by the Attachments macro, by choosing the edit icon beside each label.

If you add one or more labels to a template, that label will be copied to the page when someone adds a page based on that template. See Creating a Template.

The Labeled content page

If you're viewing a page or post that has labels or displays the Attachments macro, you can choose any label to go to the Labeled content page for the space. Choose Popular Labels or All Labels from the cog at the top-right – to view the most-used labels or all labels in the space – or choose See content from all spaces from the cog to view labeled content from all spaces in your Confluence site.

Screenshot: The Labeled content page

The Popular Labels option displays a word cloud, where the bigger a label is displayed, the more popular it is. Choose any label to view content tagged with that label.

You can also navigate to the labels view for a space by entering the following URL (replace SPACEKEY with the space's key):

```
<your.Confluence.site>/labels/listlabels-alphaview.action?key=SPACEKEY
```

Search by label

You can use the 'labelText:' prefix to search specifically for content that has a specific label. For example, if you're looking for pages with the label 'chocolate', type labelText:chocolate into the search
field in the Confluence header. For more examples of searching by label, see Confluence Search Syntax.

Search for labeled pages using a URL

Entering a URL with an appended label or labels is another way to search for pages with particular labels.

In your browser's address bar, enter the following URL and press enter: http://<your.Confluence.site>/label/foo+bar

The Labeled content page will load, showing search results for pages with the both labels, 'foo' and 'bar'. Replace 'foo' and 'bar' with the label(s) you want to search for, and separate multiple labels with a + symbol.

Adding a label to your results:

Once you're on the Labeled content page, you can add more labels to your search by choosing them from the Related Labels list at the top-right of the page. Each label is listed with a plus (+) sign.

If you want to remove labels from your search, locate the included labels at the top of the page and choose the label(s) you want to remove. Each included label will be listed with a minus (−) sign.

Remove labels

When viewing page, blog post, or attachment labels, an x appears alongside each label. Choose the x to remove the label.

You can't remove, consolidate or manage labels directly. A label is created by adding it to a page for the first time, and ceases to exist once its been removed from all pages it was added to.

If you have deleted pages that contain a label, you may need to purge the deleted pages from the space's trash to ensure that the label disappears too.

Display Pages with Label Macros

Using labels and macros, you can categorize pages and then display them in Confluence in a number of ways.

As an example, you could label all pages relevant to the marketing team with 'marketing', and then add more specific labels like 'online', 'mobile', and 'physical' to different pages where required.

You could then use the Content by Label Macro to display different combinations of pages with the marketing label. Some combinations you could use would be:

- All pages with the label 'marketing'.
- Pages with all of the following labels: 'marketing', 'mobile', and 'online'.
- Pages with either the 'mobile' or 'online' labels, in the Marketing space.

There are a lot of ways you can filter the content, making it easier for you to find content that's relevant to you.

Other label macros

Here are some other macros that use labels, and can help you categorize and display your content.

**Navigation Map macro**

The Navigation Map macro renders the list of pages associated with a specified label as a navigation map.

**Related Labels macro**

The Related Labels macro lists labels commonly associated with the current page's labels.
Content by Label macro

The Content by Label macro displays a list of content marked with specified labels.

Content Report Table macro

The Content Report Table macro displays a set of pages and blog posts in tabular format, based on the specified labels.

Labels List macro

The Labels List macro lists all labels of a space, grouped alphabetically.

Recently Used Labels macro

The Recently Used Labels macro lists labels most recently used in a specified scope - global (site), space, or personal.

Popular Labels macro

The Popular Labels macro displays popular labels in a list or in a heatmap (also called a cloud).

Drafts

A draft is a page you've never published. Unpublished changes are edits that you've made to a published page, without republishing them.

Confluence autosaves your drafts and unpublished changes as you work, so if you get interrupted and close your tab or navigate away, your content lives on for you to resume editing when you're ready.

If you're creating or editing, but don't want to publish your changes yet, hit Close at the bottom-right of the editor. This will save those changes in the editor without publishing, and you can return to them at any point. Closing the editor will land you back on the published version of the page, or, if you're working on a draft, on your Recently worked on list.

Find drafts and unpublished changes

Drafts and pages with unpublished changes appear in Recently worked on in the dashboard. You can easily differentiate between these as they'll have a 'draft' or 'unpublished changes' lozenge next to their titles. The 'unpublished changes' lozenge is only visible to people who have contributed to the draft or unpublished changes, so you don't have to worry about it distracting your viewers.

Resume editing a draft

On this page:
- Find drafts and unpublished changes
- Resume editing a draft
- Resume editing a page with unpublished changes
- Discarding unpublished changes
- Delete a draft
You can find your drafts under Recently worked on or by heading to your profile and clicking on Drafts (only drafts that you created show in your profile). Clicking on a draft will drop you straight into the editor so you can keep editing and/or publish.

If you didn't enter a page title, the draft will be called 'Untitled'.

Resume editing a page with unpublished changes

If you've been editing a page that's already been published, you can find the page again either through the page tree or under your Recently worked on. The 'Unpublished changes' lozenge makes them easy to spot.

Edit the page to see the unpublished changes and keep editing, then, when you're ready, hit Publish.

Discarding unpublished changes

If you make changes to a published page, then change your mind, you can discard all changes by reverting to the last published version of the page. This will discard all unpublished changes made by you and any others who have edited the page since the last time it was published.

Before you revert to the last published version you should:

- Check who else has edited the page since last publish - their avatars will be shown at the top of the editor.
- In the editor, go to
  > View changes to see all changes that have been made since last publish. The changes won't be attributed to individual users.

Once you've checked to make sure you aren't going to inadvertently discard someone else's changes, go to
  > Revert to last published version to discard all changes.

Delete a draft

To delete a draft go to
  > Delete unpublished page.

Because drafts have never been published, you'll be deleting the entire page or blog post. Discarded drafts are not sent to the trash.

Drafts in Confluence are shared, meaning other people can work on them with you. If you delete a draft that other people have worked on, you're deleting their changes too.

Concurrent Editing and Merging Changes

This page covers the concurrent editing behavior in Confluence 6.0 or later when your administrator has chosen to disable collaborative editing.

In most cases, this won't apply to your Confluence site.

Sometimes, another user may edit the same page as you're editing, at the same time you do. When this happens, Confluence will do its best to ensure nobody's changes are lost.

Related pages:
- Page History and Page Comparison Views
- Drafts
How will I know if someone else is editing the same page as I am?

If another user is editing the same page as you, Confluence will display a message above your edit screen letting you know who the other user is and when the last edit was made.

Screenshot: Concurrent editing notification

What happens if two of us are editing the same page and the other user saves before I do?

If someone else has saved the page before you, when you click Save, Confluence will check if there are any conflicts between your changes and theirs. If there are no conflicting changes, Confluence will merge the changes.

If there are conflicts, Confluence will display them for you and give you the option to:

- **Continue editing** - Continue to edit the page; useful if you want to manually merge the changes.
- **Overwrite** - Replace the other person's edits with yours (their edits will not be included in the latest version).
- **Cancel** - Discard your changes and exit the editor, keeping the other person's edits.

Example Scenario

For example, Alice and Bob both edit the same page at the same time.

If Alice clicks save before Bob, Bob is now effectively editing an out-of-date version of the page. When Bob clicks save, Confluence will examine his changes to see if any overlap with Alice's. If the changes don't overlap (i.e. Alice and Bob edited different parts of the page), Bob's changes will be merged with Alice's automatically.

If Bob's changes overlap with Alice's, Confluence will display an error message to Bob showing where Alice has changed the page, and giving Bob the options to overwrite Alice's changes with his own, to re-edit the document to incorporate Alice's work, or to cancel his own changes entirely, maintaining Alice's changes.

**Page Restrictions**

Page restrictions allow you to control who can view and/or edit individual pages in a space. So, if you're working on a page that shouldn't be viewed by just anybody, it's easy to lock it down to the people who need to know. You can add restrictions for individuals or for Confluence groups.

To add or remove page restrictions, you'll need to have permissions to edit the page and 'Restrict' or 'Admin' permission in the space.

**Restrict a page or blog post**

To restrict who can view or edit a page or blog post:

1. Chose the Restrictions icon at the top of the page.
2. Choose whether you just want to limit who can Edit, or who can View and / or Edit.
3. Enter users or groups then click Add to add them to the list.
   - If you chose Viewing and Editing restricted you can further specify for each person or group whether they can edit or just view the page.
4. Apply the restrictions.

You can add as many users and/or groups as you need. You can apply page restrictions to published and

On this page:
- Restrict a page or blog post
- Remove restrictions from a page
- Get access to a restricted page
- View all restricted pages in a space
- Notes
unpublished (draft) pages.

In this example, some users and groups can view only, others can also edit, plus there are inherited restrictions that might impact who can view the page.

1. **Speed it up**: apply the same restriction to multiple people and groups.
2. **Watch out**: restrictions on other pages can affect this one.
3. **Be specific**: choose exactly what each group or person can do.

**Who is 'everyone'**?

When we say "everyone can view this page" *everyone* means all the people who can view the page by default. There are two things that can affect who can view a page - the space permissions, and view restrictions on any parent pages that are being inherited.

Restrictions don't override a person's space permission. For example, if you say a person 'can view' in the restrictions dialog and they don't have 'view' permissions for the space, they won't be able to see the page.

**How do inherited restrictions work?**

View restrictions are inherited, which means a restriction applied to one page will cascade down to any child pages. Edit restrictions are not inherited, which means pages need to be restricted individually.
The restrictions dialog will tell you when there are inherited restrictions that might affect who can view your page.

Here’s the basics:

- If you restrict **viewing** to a person or group, only they will be able to see that page and all its child pages (unless there are further restrictions on the child pages).
- If you restrict **editing** to a person or group, they’ll be able to see and edit that page, plus see its child pages.
- Parent pages (higher up in the page hierarchy) can have their own view restrictions that may prevent people from viewing your page.

If the person you’ve listed as a viewer or editor can’t see the page, check to make sure:

- they have **View space permission** for that space, or
- there’s no view restriction on a page higher up the page hierarchy that prevents them seeing any children of that page.

**View current page restrictions**

The restrictions icon at the top of the page gives you a clue that the page has restrictions:

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![icon]</td>
<td>Viewing this page is not restricted. Everyone can see this page (but editing may be restricted).</td>
</tr>
<tr>
<td>![icon]</td>
<td>The page is restricted. Click the icon to see the list of who can view and edit this page.</td>
</tr>
<tr>
<td>![icon]</td>
<td>The page is inheriting restrictions from another page. Click the icon then choose Inherited Restrictions to see a list of pages this page is inheriting restrictions from.</td>
</tr>
</tbody>
</table>

**Remove restrictions from a page**

Removing restrictions is easy. Choose **No restrictions** to remove all restrictions, or click **Remove** next to each person or group in the list if you want to change who can view or edit the page.

**Get access to a restricted page**

If you navigate to a page that you’re not able to view or edit because it has page restrictions applied (for example from a link, an invite, or page URL) you may be able to request access to the page.
If the request access message above doesn't appear, you're not able to request access for that particular page. This usually is because the page has inherited view restrictions from a parent page, you don't have adequate space permissions, or there is no mail server set up.

To request access to a restricted page:

1. On the restricted page choose Request access.
2. Confluence will send an email to up to 5 people most likely to be able to grant you access.
3. Wait for an email confirming that access has been granted.

The user will receive an email confirming that access has been granted.

To grant access to a restricted page:

1. In the request access email, choose Grant access.
   You'll be taken to the restricted page, and a dialog will appear with the access request.
2. Choose Grant access.
   (We'll let you know if someone else got there before you, and has already granted access)

The user will receive an email confirming that access has been granted.
This process is the same as navigating to

***

> Restrictions and adding a 'View' restriction for the user.

**Who can grant access?**

When a user requests access to a restricted page, Confluence will send an email to up to 5 people who are most likely to be able to grant access, in the following order:

1. people who have contributed to the page in the past, can see the page and have 'Restrict' or 'Admin' space permission (sorted by last edit date)
2. space administrators who can see the page (sorted alphabetically).

This means that the request should be actioned quickly, as it prioritizes the people who have been interacting with the page most recently. There's no follow up email if none of the 5 people respond, the user will need to contact a space administrator directly to ask for access.

**Disable the ability to request access**

If you don't want people to be able to request access to restricted pages, for example if you're using Confluence for public documentation, you can disable the Confluence Request Access Plugin. See Managing System and Marketplace Apps.

**View all restricted pages in a space**

You need space admin permissions to view the list of restricted pages in a space.

**To view restricted pages:**

1. Go to the space and choose Space tools > Permissions from the bottom of the sidebar
2. Choose Restricted Pages.

*Screenshot: Restricted pages in a space*
Notes

- **You can't exclude yourself**
  When you apply a restriction, Confluence will automatically add you to the list. You can't remove yourself from this list.

- **Space Admin and System Administrator access to restricted pages**
  Users with 'Admin' permissions in a space, or users with the System Administrator global permission can remove restrictions from pages, even if the page restriction prevents them from viewing the page. Go to **Space Administration > Restricted Pages**.

Links

You can create links to pages, blog posts, anchors, attachments, external websites, Jira issues and more. Links can be text or images, and can be added in many different ways.

Links to pages within your Confluence site are relative, which means that you can move pages and rename pages without breaking links.

This page explains the most common ways to create links.

**Insert a text link**

To insert a link on a page:

1. Select some text or position your cursor where you want to insert the link
2. Choose **Link** on the toolbar or use the keyboard shortcut **Ctrl+K**
3. Select a page, blog post or attachment, or enter an external URL (see below for how to link to particular types of content)
4. Enter or modify the link text (this is the text that will appear on the page. If this field is left blank, the page name or URL will be used as the link text.)
5. Choose **Insert**

**Other ways to do this**

There are a few other ways to insert a link:

- Type `[ followed by the page or attachment name. Autocomplete will suggest matching items for you, or
- Paste a URL directly onto your page. Confluence will automatically create the link, and if the URL is for a page in the current site, the page name will be set as the link text.

⚠️ Confluence doesn't provide an option to configure a link to open in a new window or tab. Users can choose to right click / CTRL+click the link if they want to open it in a particular way.

**Insert an image link**

1. Select an image on your page
2. Choose **Link** on the Image Properties toolbar
3. Select a page, blog post or attachment, or enter an external URL (see below for how to link to particular types of content)
4. Choose **Insert**
Modify a link

1. Select the link text or image
2. Choose Edit from the link properties toolbar
3. Modify the link and choose Save

Remove a link

1. Select the link text or image
2. Choose Unlink from the properties toolbar

Link to specific types of content

Confluence supports many methods for creating links. Some of the common ones are listed here.

<table>
<thead>
<tr>
<th>Type of link</th>
<th>Ways to do this</th>
</tr>
</thead>
<tbody>
<tr>
<td>Link to a page</td>
<td>Choose Link &gt; Search then enter part of the page name.</td>
</tr>
<tr>
<td></td>
<td>or</td>
</tr>
<tr>
<td></td>
<td>Choose Link &gt; Recently viewed and select a page from the list.</td>
</tr>
<tr>
<td></td>
<td>or</td>
</tr>
<tr>
<td></td>
<td>Type [ and enter part of the page name then select the page from the list.</td>
</tr>
<tr>
<td></td>
<td>or</td>
</tr>
<tr>
<td></td>
<td>Paste the URL of the page onto your page (Confluence will automatically create</td>
</tr>
<tr>
<td></td>
<td>the link).</td>
</tr>
</tbody>
</table>
| Link to a page in another space | Choose [Link > Search](#) enter part of the page name and select [All Spaces](#) from the drop down.  
| | or  
| | Choose [Link > Advanced](#) then enter the space key followed by the page name `spacekey:mypage`.  
| | or  
| | Type `[` and enter part of the page name then select the page from the list. (you can hover over each suggestion to see which space the page is from).  
| Link to a blog post | Choose [Link > Search](#) and enter part of the blog post name.  
| | or  
| | Type `[` and enter part of the blog post name then select the blog post from the list.  
| Link to an attachment or image on this page | Choose [Link > Attachment](#) then upload or select an attachment from the list.  
| | or  
| | Type `[` and enter part of the attachment file name then select the attachment from the list.  
| Link to an attachment on another page | Choose [Link > Search](#) and enter part of the attachment name.  
| | or  
| | Type `[` and enter part of the attachment file name then select the attachment from the list (you can hover over each suggestion to see which space the page is from).  
| Link to a website | Choose [Link > Web Link](#) then enter the website URL.  
| | or  
| | Type or paste the URL onto the page (Confluence will automatically create the link).  
| Link to an email address | Choose [Link > Web Link](#) then enter the email address.  
| | or  
| | Type or paste the email address onto the page (Confluence will automatically create a 'mailto:' link).  
| Link to an anchor on a page | Choose [Link > Advanced](#) then enter the anchor name in one of the formats below.  
| | For an anchor on this page: `#anchor name`.  
| | For an anchor on another page in this space: `page name#anchor name`.  
| | For an Anchor on another page in another space: `spacekey:page name#anchor name`.  
| | See [Anchors](#) for more information on using anchors.  

---

*Created in 2019 by Atlassian. Licensed under a Creative Commons Attribution 2.5 Australia License.*
### Link to a heading on a page

Choose **Link > Advanced** then enter the heading in one of the formats below. Heading text is case sensitive and must be entered without spaces.

- For a heading on this page: `#MyHeading`.
- For a heading on another page in this space: `Page Name#MyHeading`.
- For a heading on another page in another space: `spacekey:Page Name#MyHeading`.

Be aware that these links will break if you edit the heading text. Consider using the [Table of Contents](#) macro or an [Anchor](#) instead.

### Link to a comment on a page

Go to the comment, right click the **Date** at the bottom of the comment and copy the link. Paste the link directly onto your page or choose **Link > Web Link** and paste in the URL.

or

Type `$` then enter the Comment ID (`'12345'` in this example): `[12345]`.

### Link to an undefined page (a page that does not exist yet)

Choose **Link > Advanced** then enter the new page name (a page will be created on click).

or

Type `[` then enter the new page name then choose **Insert link to create page**.

See [Undefined Page Links](#) for more information on undefined pages.

### Link to a personal space or user profile

Choose **Link > Search** then enter the user’s name and select their personal space homepage or their profile from the list.

or

Type `[` then enter the user’s name and select their personal space homepage or their profile from the list.

### Link to a Jira issue (where Confluence is connected to Jira)

Paste the Jira issue URL - Confluence will automatically create a Jira Issue macro.

### Link to Confluence pages from other websites

The best way to link to a Confluence page from outside Confluence, for example from another site or in an email, is to use the share link which is a permanent URL. This ensures that the link to the page is not broken if the page name changes.

To access the permanent URL for a page:

1. View the page you wish to link to.
2. Choose **Share**.
3. Copy the **Share link**.

You do not need to use the share link to link to pages within your Confluence site. Confluence automatically updates links when you rename or move a page to another space.

If you want to link to specific content such as anchors, headings or comments you need to use the following link syntax. Note that there are no spaces in the page name, anchor name or heading text.

In the examples below, the anchor name is 'InsertLinkAnchor' and the heading text is 'Insert a link'.

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Link syntax</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td>Link to an anchor (from an external website)</td>
<td><a href="http://myconfluence.com/display/spacekey/Page+name#pagename-anchornamed">http://myconfluence.com/display/spacekey/Page+name#pagename-anchornamed</a></td>
</tr>
<tr>
<td>-------------------------------------------</td>
<td>------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Link to a heading (from an external website)</td>
<td><a href="http://myconfluence.com/display/spacekey/Page+name#pagename-headingtext">http://myconfluence.com/display/spacekey/Page+name#pagename-headingtext</a></td>
</tr>
<tr>
<td>Link to a comment (from an external website)</td>
<td><a href="http://myconfluence.com/display/spacekey/pagename?focusedCommentId=commentid#comment-commentid">http://myconfluence.com/display/spacekey/pagename?focusedCommentId=commentid#comment-commentid</a></td>
</tr>
</tbody>
</table>

Some things to note when linking to anchors from a website or email message:

- The page name is repeated in the URL, after the # sign. The second occurrence of the page name is concatenated into a single word, with all spaces removed.
- There is a single dash (hyphen) between the concatenated page name and the anchor name.
- The anchor name in the full URL is concatenated into a single word, with all spaces removed.
- The anchor name is case sensitive. You must use the same pattern of upper and lower case letters as you used when creating the Anchor.

**Link to a comment**

You can add a link to a comment by using the comment URL (a permanent link), or by using wiki markup to link to the Comment ID.

To find out the comment URL and comment ID:

1. Go to the comment you wish to link to
2. Choose the Date at the bottom of the comment and examine the URL

The number after 'comment-' is the Comment ID. An example is shown here.

https://confluence.atlassian.com/display/DOC/Working+with+Links?focusedCommentId=368640803#comment-368640803

You can use wiki markup directly in the editor to link to a comment. Enter [$ followed by the Comment ID, for example [$12345] where ‘12345’ is the Comment ID.

**Using shortcut Links**

If you have configured shortcut links on your Confluence site, then you can link to an external site using a shortcut link that looks like this:CONF-17025@jira.

Our Confluence site (where this documentation is housed) is configured to allow shortcut links to our Jira site, using the shortcut @jira. So the shortcut link CONF-17025@jira produces this link.

To add a shortcut link using the 'Insert Link' dialog:

1. Choose Link > Advanced and enter or paste the shortcut link into the Link field (shortcut links are case-insensitive)
2. Modify or enter link text (this is the text that will appear on the page)
3. Choose Insert
You can also type '[' and choose Insert Web Link > Advanced to enter a shortcut link.

See Configuring Shortcut Links for more details.

Trackback

Trackback enables two sites can stay informed each time one site refers to the other using trackback 'pings'.

In Confluence, Trackback can be enabled by a site administrator in the Administration Console. When Trackback is enabled, any time you link to an external webpage that supports Trackback Autodiscovery, Confluence will send a Trackback ping to that page to inform it that it has been linked to.

Confluence pages also support Trackback Autodiscovery, and when Trackback is enabled, can receive trackback pings sent by other sites.

To see who has sent a Trackback ping to a Confluence page:

1. Go to the page
2. Choose Tools > Page Information

Any Trackback pings the page has received will be listed under the page’s Incoming Links.

Confluence incoming trackback pings only work with referenced pages that are public (anonymously viewable).

Anchors

You can use anchors to enable linking to specific locations on a page, and they can be especially useful for allowing your readers to navigate to specific parts of a long document. Anchors are invisible to the reader when the page is displayed.

There are two steps to using an anchor:

Step 1: Create the anchor
Step 2: Create a link to the anchor

Step 1: Create the anchor

Add the Anchor Macro to mark the location you want to link to:

1. Do either of the following in the Confluence editor:
   - Choose Insert > Other Macros, then find and select the Anchor macro
   - Type '{' and the beginning of the macro name, then select the Anchor macro
2. Enter the Anchor Name (For example, ‘bottom’ or ‘important information’)
3. Choose Insert

Macro options (parameters)

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
</table>

On this page:

- Step 1: Create the anchor
- Step 2: Create a link to the anchor
- Notes

Related pages:

- Links
Anchor Name | None |
---|---|
This is the anchor name that you will use when creating the link.
- The anchor name can include spaces. Confluence will remove the spaces automatically when building a URL that points to this anchor.
- The anchor name is case sensitive. You must use the same pattern of upper and lower case letters when creating the link as you used when creating the Anchor macro.

Step 2: Create a link to the anchor
You can link to an anchor from:
- A page on the same Confluence site. The link may be on the same page as the anchor, another page in the same space, or a page in another space on the same Confluence site.
- Another web page or another Confluence site, using a specifically formatted URL.

**Link to an anchor on the same Confluence site:**
1. Select some text or position your cursor where you want to insert the link
2. Choose **Link** in the toolbar or press **Ctrl+K**
3. Choose **Advanced** and enter the anchor name in the **Link** field, following the format below.

<table>
<thead>
<tr>
<th>Anchor location</th>
<th>Link syntax for anchor</th>
<th>Examples</th>
</tr>
</thead>
</table>
| Same page             | #anchor name                                    | #bottom
|                       |                                                  | #important information |
| Page in same space    | page name#anchor name                           | My page#bottom
|                       |                                                  | My page#important information |
| Page in different space | spacekey:page name#anchor name                   | DOC:My page#bottom
|                       |                                                  | DOC:My page#important information |

4. Enter or modify the **Link Text** (this is the text that will appear on the page. If this field is left blank, the page name or URL will be used as the link text)
5. Choose **Save**

- Anchor names are case sensitive
- Enter page and anchor names with spaces when you link to them in the same Confluence site
- If you're linking to an anchor on a different page that has special characters in its name, where the URL displays a page ID rather than a name, you should still enter the page name when linking to it

**Screenshot: The 'Advanced' option in the link dialog**

![Insert link dialog with anchor example]

**Link to an anchor from another web page or another Confluence site:**
Use a full URL in the following format:
## Link syntax

<table>
<thead>
<tr>
<th>Examples</th>
</tr>
</thead>
<tbody>
<tr>
<td><a href="http://myconfluence.com/display/spacekey/pagename#pagename-anchornamel">http://myconfluence.com/display/spacekey/pagename#pagename-anchornamel</a></td>
</tr>
</tbody>
</table>

Notes about the full URL:

- The page name is repeated in the URL, after the # sign. The second occurrence of the page name is concatenated into a single word, with all spaces removed.
- There is a single dash (hyphen) between the concatenated page name and the anchor name.
- The anchor name in the full URL is concatenated into a single word, with all spaces removed.
- The anchor name is case sensitive.
- If the page name contains special characters, where the URL displays a page ID rather than a name, the link to an anchor will look more like this: http://myconfluence.com/pages/viewpage.action?pageId=54689987#Test-page1!-anchor

In this example the page title is Test - Page 1! and the anchor name is anchor.

### Notes

- **Table of contents on a page:** Consider using the Table of Contents Macro to generate a list of links pointing to the headings on the page. The list of links will appear on the page, and will be automatically updated each time someone changes the wording of a heading.
- **Linking to headings:** You can link directly to the headings of a page. See Links. However, if someone changes the wording of a heading, those direct links will be broken. Use the Anchor macro to ensure a lasting link within the body of a page.
- **Site welcome message:** If you are adding an anchor to a page that you are using in the site welcome message, you can only link to that anchor from another page. Internal links within that page will not work.
- **Templates:** When you are previewing a template, a link to an anchor is displayed as a 'broken' link. However, when you create a page using the template the resulting page will have the correct link.

### Tables

Confluence tables allow you to present important information and discuss it with your team. Use familiar table formatting options — resizing columns, coloring cells, rows and columns, and sorting the table by clicking the column headers — to view the information the way you like it.

#### Insert a table

**To create a table:**

1. Hit the Table button in the toolbar
2. Click a cell in the drop-down to set the number of columns and rows in your table

#### Edit your table

To resize table columns, just click and drag the column's border. To make other changes to your table, click
inside it to reveal the table toolbar.

Here's a summary of the table tools:

<table>
<thead>
<tr>
<th>Column width modes</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Responsive</strong> – The table will expand as you add content, and you can drag to resize the columns. It'll also resize itself to fit the page-viewer's window size (within reason).</td>
</tr>
<tr>
<td><strong>Fixed width</strong> – Drag column borders to set width. Columns appear at your set size, regardless of content and window size.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Rows</th>
</tr>
</thead>
<tbody>
<tr>
<td>Insert rows before or after the current row</td>
</tr>
<tr>
<td>Delete the current row</td>
</tr>
<tr>
<td>Cut, copy and paste the current row</td>
</tr>
<tr>
<td>Mark a row as a header row (shaded with bold text)</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Columns</th>
</tr>
</thead>
<tbody>
<tr>
<td>Insert columns before or after the current column</td>
</tr>
<tr>
<td>Delete the current column</td>
</tr>
<tr>
<td>Cut, copy and paste the current column</td>
</tr>
<tr>
<td>Mark a column as a header column (shaded with bold text)</td>
</tr>
<tr>
<td>Add a numbering column to automatically number each row</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Cells</th>
</tr>
</thead>
<tbody>
<tr>
<td>Merge selected cells</td>
</tr>
<tr>
<td>Split selected cells</td>
</tr>
<tr>
<td>Change cell color</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Table</th>
</tr>
</thead>
<tbody>
<tr>
<td>Delete entire table</td>
</tr>
</tbody>
</table>

### Shortcut keys

<table>
<thead>
<tr>
<th>Windows</th>
<th>Action</th>
<th>Mac OS X</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ctrl+Shift+c</td>
<td>Copy the current table row, or the selected rows.</td>
<td>Ctrl+Shift+c</td>
</tr>
<tr>
<td>Ctrl+Shift+i</td>
<td>Insert a table. (Opens the Insert Table dialog.)</td>
<td>Ctrl+Shift+i</td>
</tr>
<tr>
<td>Ctrl+Shift+v</td>
<td>Paste the table rows from your clipboard, placing them above the current row.</td>
<td>Ctrl+Shift+v</td>
</tr>
<tr>
<td>Ctrl+Shift+x</td>
<td>Cut the current table row, or the selected rows.</td>
<td>Ctrl+Shift+x</td>
</tr>
<tr>
<td>Alt+Up Arrow</td>
<td>Add a row above the current row.</td>
<td>Alt+Up Arrow</td>
</tr>
<tr>
<td>Alt+Down Arrow</td>
<td>Add a row below the current row.</td>
<td>Alt+Down Arrow</td>
</tr>
</tbody>
</table>
For more editor keyboard shortcuts, see Keyboard shortcuts.

Sort the table in view mode

When viewing a table on a page, you can sort it by clicking the sort icons in the header row.

*Screenshot: A colorful, sortable table*

<table>
<thead>
<tr>
<th>Document</th>
<th>Author</th>
<th>Reviewer</th>
</tr>
</thead>
<tbody>
<tr>
<td>Get started</td>
<td>Sandy</td>
<td>Pete</td>
</tr>
<tr>
<td>Installation guide</td>
<td>Sandy</td>
<td>Trinh</td>
</tr>
<tr>
<td>Upgrade guide</td>
<td>Juan</td>
<td>Lise</td>
</tr>
</tbody>
</table>

Sticky table headers in view mode

In some instances table header rows will stick to the top when you're viewing a page, making those really long tables easier to read. There are a few exceptions, though. Table headers aren't sticky when your table:

- Is inside a page layout, inside another table, or inside a macro.
- Has no header row or there are cells in the top row that aren't marked as headers.
- Has a header column, instead of a header row, and scrolls horizontally.
- Contains another table, that has its own header row.

Add, Assign, and View Tasks

Keep track of the things that need to get done with tasks. With the ability to give each task an assignee and due date, and plenty of ways to see your tasks, you can make sure nothing slips through the cracks.

Add a task

You can add tasks on any page in Confluence. For example, you might add tasks under action items on a meeting notes page, or in a requirements page – anywhere you need a lightweight task management solution.

To create a task:

1. In the editor, choose the Task list button or use the keyboard shortcut [ ]
2. Start typing your task – @mention someone to assign the task to them, and type // and choose a due date

The first person you mention in a task is the assignee; you can even assign tasks to yourself.

**Note:** If you assign a task to someone who doesn't have permission to view the page or space, they won't see the task.

View tasks

There are a number of ways to keep track of tasks assigned to you, or tasks you've created for others.

On a page

The simplest way to see a task is on the page it was originally created on. It's easy to see if a task is complete, who it's assigned to, and when it's due. If a task is nearing or passed its due date, the color of the
date will change (red for overdue, orange for due in the next 7 days).

### Action items

<table>
<thead>
<tr>
<th>Description</th>
<th>Due date</th>
<th>Task appears on</th>
</tr>
</thead>
<tbody>
<tr>
<td>@Alana Grant to decide on name of project space</td>
<td></td>
<td></td>
</tr>
<tr>
<td>@Cassie Owens to finish creating the new project space by 10 Mar 2018</td>
<td>10 Mar 2018</td>
<td>2018-03-09 Meeting notes</td>
</tr>
<tr>
<td>@Emma McRae to investigate venues for offsite and prepare costings for at least three different options by 31 Mar 2018</td>
<td>31 Mar 2018</td>
<td>2018-03-09 Meeting notes</td>
</tr>
<tr>
<td>@Harvey Jennings distribute agenda for offsite 04 Apr 2018</td>
<td>04 Apr 2018</td>
<td>2018-03-09 Meeting notes</td>
</tr>
</tbody>
</table>

In your profile

The tasks page in your profile gives you a place to see all the tasks relevant to you. Easily keep track of the status of tasks assigned to you, and tasks you've created and assigned to others.

To view the tasks page, go to **Profile > Tasks**. Use the filters to show tasks that were assigned to you or created by you in the last 6 months, and toggle between complete or incomplete tasks.

If you need to see more than just your last 6 months of tasks, use a Task Report.

In a Task Report

If you're looking for a more custom view of tasks, the **Task Report blueprint** is a great way to track tasks assigned to a specific team or project.

To create a task report:

1. Choose **Create > Task Report**
2. Select the type of report:
   - **Assigned to my team** – for tasks assigned to particular people.
   - **In my project** – for tasks that appear in a specific space or page.
   - **Custom** – for a wide range of filtering options, including by date or page label.
3. Follow the prompts to create the report.

This blueprint uses the **Task Report Macro**. You can also choose to use this macro on an existing page, for example, on a project or team space homepage.
Notes

- The date picker can be triggered by typing // or by typing a date in the format dd/mm/yyyy or dd-mm-yyyy. Typing other date formats in the editor won't trigger the date picker.
- Personal Tasks (created in the Workbox in older versions of Confluence) don't appear in the Tasks view or Task Report. To migrate any incomplete personal tasks, go to Workbox > Personal Tasks and follow the prompts.
- The wiki markup based Tasklist Macro has been removed from the macro browser. If you have a Tasklist macro on a page it will continue to work, but you will be unable to add new Tasklists using this macro.

Do more with Confluence

For even more ways to organize your tasks in Confluence, check out these apps from the Atlassian Marketplace:

- Comala Workflows: Improve document collaboration by assigning users to review, approve, and publish pages
- TodoMe for Confluence: Add, assign, and view tasks from every Confluence page
- Agile Retrospectives for Confluence: Interactively assign action items to team members

Autocomplete for links, files, macros and mentions

When using the Confluence editor, you can type a trigger character or press a keyboard shortcut to see a list of suggested links, files or macros to add to your page, or to mention another user (and automatically notify them of this).

Summary of autocomplete

<table>
<thead>
<tr>
<th>What you want to do</th>
<th>Trigger character</th>
<th>Keyboard shortcut</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add a link on your page</td>
<td>[</td>
<td>Ctrl+Shift+K</td>
<td>See a list of suggested pages or other locations to link to from your page. More...</td>
</tr>
<tr>
<td>Display an image, video, audio file or document on your page</td>
<td>!</td>
<td>Ctrl+Shift+M</td>
<td>See a list of suggested images, multimedia files and documents to embed in your page. More...</td>
</tr>
<tr>
<td>Add a macro on your page</td>
<td>{</td>
<td>None</td>
<td>See a list of suggestions as you begin typing a macro name. More...</td>
</tr>
<tr>
<td>Notify another user by email that you have mentioned them on your page</td>
<td>@</td>
<td>None</td>
<td>See a list of suggested users to mention. More...</td>
</tr>
</tbody>
</table>
Using autocomplete for links

Type ']', or press Ctrl+Shift+K, to see a list of suggested pages or other locations to link to from your page. You can link to pages, user profiles, images, documents and other file attachments.

To autocomplete a link:

1. Edit the page.
2. Click where you want to insert a link and do one of the following:
   - Type '[' and then the first few characters of the page title, user's name, image name or file name.
   - Type the first few characters of the page title, user's name, image name or file name (or select
relevant text) and then press Ctrl+Shift+K.

3. Click the relevant link from the list of suggestions.

If the item you need is not in the list, either:

- Choose **Search for ‘xxx’** to continue looking for the page within Confluence, or
- Choose **Insert Web Link** to insert a link to an external web page using the link browser.

**Screenshot: Autocomplete for a link**

I want to add a link to **[sample]**

Using autocomplete for images, videos, audio files and documents

You can use the autocomplete as a fast way of embedding images, videos, audio files and documents into your page. Type an exclamation mark or press Ctrl (or Cmd)+Shift+M to see a list of suggested images, multimedia files and documents to display on your page. You can use autocomplete to embed the following file types:

- Images – any format that Confluence supports.
- Videos, audio files and all multimedia formats that Confluence supports.
- Office documents supported by the Confluence Office Connector: Word, Excel and PowerPoint.
- PDF files.

**Autocomplete works most efficiently for files that are already attached to the Confluence page.**

**To embed an image, video, audio file or document:**

1. Edit the page.
2. Click where you want to insert the image, video, audio file or document and do one of the following:
   - Type ‘!’ and then the first few characters of the image, file or document name.
   - Type the first few characters of the name of the image, file or document (or select relevant text) and then press Ctrl (or Cmd)+Shift+M.
3. Choose the relevant file from the list of suggestions.

If the item you need is not in the list, either:

- Choose **Open file library** to find images and documents using the image browser, or
- Choose **Insert other media** to embed videos, audio and other multimedia files using the macro browser.

*Screenshot: Autocomplete for an image or file*

*Screenshot: Autocomplete for a macro*

I want to add a macro

**Macro suggestions**

- **Info**
- **Status**
- **Gallery**
- **Table of Contents**
- [**Open macro browser**](#)

**Using autocomplete for macros**

Type '{' to see a list of suggested macros to add to your page.

Autocomplete provides access to all available macros in your Confluence site, including any user macros that your administrator has added and made visible to all.

ℹ️ You need to know the name of macro. Autocomplete for macros will only match the name of the macro, not the description.

**To autocomplete a macro using '{'**:

1. Edit the page.
2. Click where you want to insert the macro.
3. Type '{' and then the first few characters of the macro name.
4. Choose the relevant macro from the list of suggestions.
5. Configure the macro by completing the form fields as prompted.

If the macro you need is not in the list, choose **Open Macro Browser** in the list of suggestions to continue looking for the macro in the macro browser. See **Macros**.

*Screenshot: Autocomplete for a macro*
Using autocomplete for mentions

You can use autocomplete to automatically notify another Confluence user that you have mentioned them in a page, blog post, or comment. Type '@' and part of the person's name, to see a list of suggested users.

**Note:** Use the person's full name. Autocomplete will recognize users' full names only, not their usernames.

Canceling autocomplete

The autocomplete starts automatically when you press the trigger characters. You may want to close the autocomplete menu or escape from autocomplete once it has started.

There are a few different ways to stop the autocomplete once it has started:

- Press the escape key, 'Esc', on your keyboard.
- Click somewhere else in the editor panel.
- Press an arrow key to move out of the autocomplete area.
- For the link autocomplete only: enter a right-hand square bracket, like this: ]

Enabling and disabling autocomplete

You can turn off the triggering of autocomplete by the '[' and ']' characters. This will prevent the autocomplete from starting automatically when you press one of the trigger characters. You can also turn it back on again.

Notes:

- This setting does not affect the keyboard shortcuts for autocomplete (Ctrl+Shift+K and Ctrl+Shift+M). Even if the trigger characters are disabled, you can still use the keyboard shortcuts for autocomplete.
- This setting affects only you. Other people using Confluence can enable or disable the setting on their user profiles independently.
- Note that autocomplete is enabled by default.

**To enable or disable the autocomplete trigger characters:**

1. Choose **your profile picture** at top right of the screen, then choose **Settings**
2. Choose **Editor** under 'Your Settings' in the left-hand panel.
3. Choose **Edit**.
4. Either:
   - Disable autocompletion by selecting **Disable Autocomplete**.
   - Enable autocompletion by clearing **Disable Autocomplete**.
5. Choose **Submit**.

_Screenshot: User settings for the editor_

Ignoring autocomplete

You can add macros, links and images by **wiki markup** alone. Type the macro, including its parameters and
the closing curly bracket. Add a link, such as an anchor link, and end it with a square bracket. Insert an image or other embedded object, enclosed between exclamation marks. As soon as you close the macro, link, or embedded image, Confluence will convert it to rich text format and add it to the page.

For more information about mouse-free macros, links and images, choose Help > Keyboard Shortcuts from the Confluence header.

**Page Layouts, Columns and Sections**

The layout of your pages can have a big impact on how they’re read, and layouts, used well, allow you to position text, images, macros, charts, and much more, to have the best visual impact.

There are two ways to modify the layout of a Confluence page:

- Use page layouts to add sections and columns
- Use macros to add sections and columns.

Page layouts provide a simple, visual representation of your page layout in the editor, while the macros are more flexible and allow for greater complexity in your layout.

**Use page layouts**

The page layouts tool allows you to structure your page using horizontal sections and vertical columns. By adding multiple sections with different column configurations you can build quite complex layouts very easily.

*Screenshot: Editor view of a page showing three sections with different column configurations.*

Start by adding a horizontal section to your page.

**To add a section:**

1. Choose the **Page Layout** button in the toolbar. The Page Layout toolbar appears.
2. Choose **Add Section**

The new section appears below your current content, with the boundaries of the section(s) indicated by dotted lines (the dotted lines aren't visible when you view the page).

**To change the column layout in a section:**

1. Place your cursor in the section you wish to change
2. Choose a layout from the page layout toolbar (for example, two columns or three columns)
Any text, images or macros in your section are not lost when you change the column layout. When you decrease the number of columns, Confluence will move your content to the left. When you increase the number of columns, Confluence will add blank columns to the right of your existing content.

**To move a section to another part of the page:**

1. Place your cursor in the section you wish to move
2. Choose the **Move up** or **Move down** buttons

The section and all of its content will be moved above or below other sections on the page.

**To delete a section:**

1. Place your cursor in the section you wish to remove
2. Choose **Remove section**

The section and all of its content will be removed.

### Notes about Page Layouts

- **Column width** – The width of the columns are fixed. If you need more than three columns, or columns of a specific width, you should use the Section and Column macros described below.
- **Very wide tables** – The width of each column is set to a percentage of the page width. The icons in the drop-down menu indicate the relative widths for each layout. In most cases, Confluence will adapt the width of the columns to fit the width of the page. If a column includes an item that’s too wide for it, you’ll see a horizontal scroll bar when viewing the page.

### The Section and Column macros

You can use the Section and Column macros to add a set of columns to the page. The Section macro defines an area that will contain the columns. You can have as many sections as you like. Within each section, you can have as many columns as you like.

The Section and Column macros are useful if you want to define a specific percentage or pixel width for each column.

**To add a section and some columns to a page:**

1. In the Confluence editor, choose **Insert**
   
   > **Other Macros**
   
2. Find the **Section** macro, select it and insert it onto the page
3. Choose **Insert > Other Macros** again
4. Find and insert the **Column** macro
5. Add your content to the column

Insert as many columns as you like within the section.

You should always have at least one column macro within a section macro. Using a section macro without any column macros can negatively affect page loading time.

**Screenshot: A section and two columns in the editor**
Macro parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

Parameters of the Section macro

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Show Border</td>
<td>false</td>
<td>Select this option to draw a border around the section and columns.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>*Note: Without a Column macro, the border will not be displayed correctly.</td>
</tr>
</tbody>
</table>

Parameters of the Column macro

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Column Width</td>
<td>100% of the page width, divided equally by the number of columns in the section.</td>
<td>Specify the width of the column, in pixels (for example, 400px) or as a percentage of the available width (for example, 50%).</td>
</tr>
</tbody>
</table>

All content within your section must be enclosed within a Column macro, otherwise the section layout will not work as expected.

Create Beautiful and Dynamic Pages

Confluence has a number of features that help you build attractive pages to engage your readers and give them the opportunity to interact with up-to-date information. This page summarizes those features and provides links to detailed instructions.

Add visual appeal

Pictures, photographs and screenshots. Confluence pages
can display images from your Confluence site and from other websites. To put an image into Confluence, you can upload it and attach it to a page or blog post, then display it on any page, blog post or comment. Alternatively, display a remote image using its web address (URL). See Displaying Images.

**Galleries.** Use the **Gallery Macro** to display a set of images. When viewing the page, people can click any of the pictures to zoom in and view the images as a slide show.

**People.** Add a **Profile Picture Macro** to show a picture of a Confluence user, or a **User Profile Macro** to show a summary of the person’s profile as well as their avatar.

**Multimedia.** You can display movies, animations and videos, and embed audio files on your Confluence page. For example, Confluence supports Adobe Flash, MP3, MP4, and various other movie formats. See Embedding Multimedia Content.

**Social video and image sharing.** The **Widget macro** displays live content from social sites such as YouTube and other video sharing sites, and **Flickr** for shared photographs. See the guide to the **Widget Connector Macro**.

### Bring numbers to life

The **Chart Macro** offers a variety of graphs and charts that you can use to illustrate statistics and other numerical data.

*Illustration: A 3-dimensional bar chart produced by the Chart macro*

![Bar chart](image)

- **Revenue**
- **Expense**

### Display presentations and documents

Display your Office documents and other presentations directly in Confluence.

- Attach your Office documents to a Confluence page then display them on the page, using the **View File Macro**. This works for Excel spreadsheets, PowerPoint presentations and Word documents.

**On this page:**
- Add visual appeal
- Bring numbers to life
- Display presentations and documents
- Pull in content from Jira applications
- Tell a story in pictures
- Vary the structure of your pages
- Integrate your content with social media
- Show activity streams

**Related pages:**
- Macros
- The Editor
- Create and Edit Pages
- Display PDF files in Confluence too, also with the View File Macro.
- Use the Widget Connector Macro to show slide decks hosted on SlideShare and other online presentation sites.

Illustration: A PowerPoint slide deck

Pull in content from Jira applications

Many project teams and customers also use Jira applications such as Jira Software or Jira Service Desk. Rather than copying and pasting issues onto your Confluence page, you can display it directly from the source, thus ensuring that the information shown in Confluence is always up to date.

Link to a feature request in your issue tracker, or display a list of fixed issues – useful for release notes and project planning. See the Jira Issues Macro.

Tell a story in pictures

A number of Marketplace apps for Confluence provide sophisticated tools for creating diagrams and mockups.

For example:

- Balsamiq Mockups for Confluence
- Creately for Confluence
- Gliffy Confluence Plugin
- Graphviz Plugin for Confluence
- Lucidchart for Confluence

Search the Atlassian Marketplace for more apps.

Before installing an add-on (also called a plugin) into your Confluence site, please check the add-on's information page to see whether it is supported by Atlassian, by another vendor, or not at all. See our guidelines on add-on support.
Vary the structure of your pages

You can build up a custom layout by using the page layout tool to add sections and columns to your page. See the detailed guidelines to Page Layouts, Columns and Sections.

Do you need to display tabular data, which your readers can sort when viewing the page? See Tables.

Use other macros to highlight and format sections of your page:

- Panel
- Info, Tip, Note, and Warning
- Code block
- Noformat

Integrate your content with social media

People share information on various social sites. You can make Confluence a focal point where people collect their shared information and see what is happening in the areas that matter to them.

Use the Widget Connector macro:

- Show a live stream of tweets from a Twitter user, or tweets matching a Twitter search.
- Display a video from YouTube or other online movie sites.
- Share photographs from Flickr.
- See what else the Widget Connector macro can do.
Illustration: Twitter stream via the Widget macro

Show activity streams

Make your Confluence pages dynamic and interactive with:

- An activity stream showing updates and comments on Confluence and other linked applications. See Gadgets.
- An RSS feed from within Confluence or an external site. See Subscribe to RSS Feeds within Confluence.
- A list of recent blog posts from within Confluence. See Blog Posts Macro.

Page Templates

When you add a new page, you don’t have to start from scratch. Instead, you can base your new page on a template — a Confluence page with predefined content. Some templates are provided by blueprints or Marketplace apps, and you can even create your own templates.

Some examples of useful templates are:

- The meeting notes template will help you and your team collaborate on notes and follow-up tasks
- The requirements template allows you to capture your software/hardware product requirements, and create related Jira issues from the page

Global templates and space templates

In Confluence, there are two categories of page templates:

- **Space templates**: These page templates are available in a specific space only. If you have space administrator permission, you can define templates via the space administration screen.
- **Global templates**: These page templates are available in every space on your site. If you have Confluence Administrator permission, you can define global templates via the Confluence Administration Console.

If you’re a system administrator, you can also download predefined templates.
Create a template

You can write your template using the Confluence editor. You can also add special variables to the page, if you want to include fields that the author will complete when adding the page. See Create a Template for more information.

Use a template

Page templates are used only when adding a page. It is not possible to apply a template to an already-existing page. Once a page has been added using a template, the template is no longer linked to the page. All further editing is performed as if the template was never used. Some Marketplace apps provide enhanced template functionality. You can search the Atlassian Marketplace for template apps. See Create a Page from a Template for more information.

Templates provided by blueprints

A blueprint is a page template with added functionality to help you create, manage and organize content in Confluence, and there’s a collection of predefined ones that ship with Confluence. You can also download additional blueprints from the Atlassian Marketplace. You can customize the blueprint templates to suit your individual needs, disable particular blueprints or even develop your own blueprints.

Promote templates in the Create dialog

If you're a space administrator, you can choose to promote specific templates and blueprints in the Create dialog. Promoting items can help ensure consistency in a space by encouraging users to create particular
types of content, instead of blank pages.

The promoted templates or blueprints will appear at the top, with all other content types, including Blank Page and Blog Post collapsed under them. To view the other types of content available choose the **Show more** link.

![Create](image)

1. **Show more**: see more templates and blueprints.

**To promote a template or blueprint:**

1. Go to **Space Tools > Content Tools**
2. Choose **Promote** next to the templates or blueprints you want to appear in the Create dialog. You can only promote templates created in this space.

Remember, by promoting a blueprint or template you'll be hiding all other items, including blank page and blog post, under the **Show more** link.

If you use the **Show more** link in the create dialog more than three times in a single space, the dialog will show you all templates by default from then on.

**System templates**

Confluence also provides 'system templates' containing content like the site welcome message and default space content. See [Administering Site Templates](#).

**Create a Template**

In Confluence, there are two categories of page templates:

- **Space templates**: These page templates are available in a specific space only. If you have space administrator permission, you can define templates via the space administration screen.
- **Global templates**: These page templates are available in every space on your site. If you have Confluence Administrator permission, you can define global templates via the Confluence Administration Console.

**Add a template**

**To create a new space template:**

1. Go to the space and choose **Space tools > Content Tools** from the bottom of the sidebar
2. Choose **Templates > Create new template**.

**To create a new global template:**

1. Go to
   > **General Configuration Global Templates and Blueprints**.
2. Choose **Add New Global Template**
The template editor

When you create or edit a template, you'll be using the editor in much the same way as when you edit a page or blog post. In addition you can add variables, which will produce a form for data collection when anyone adds a page based on the template.

Check out the article How to document releases and share release notes to see how helpful creating templates in Confluence can be.
Screenshot: The template editor with an image, table, text, and variables

Screenshot: The form displayed when you create a page based on the template
**Template variables**

When you add variables to your template, they will act as form fields. When you create a page based on a template, you’ll see a text entry box for each field. Enter data into each field, and it’ll be added to the page.

You can add the same variable more than once in the same template, which is useful if you need the same information in more than one place on the page.

**To insert a variable into a template:**

1. Choose Template > New Variable from the editor toolbar (or choose an existing variable to add it to the page)
2. Enter a name for the variable
3. Press Enter (by default this will create a single-line text input field)

To change the variable type, click the variable placeholder and the variable’s property panel will appear. Choose one of the variable types: Text, Multi-line Text, or List.

You can change the number of lines and width in characters of a Multi-line Text field. If you choose List, enter each of the items in your list, separated by commas.

**Hint:** Type $ and the variable name, then press Enter to add a new variable or to select an existing variable from a list of suggestions. The suggestions dialog shows variables already defined in this template.

There's a known issue adding variables to templates in Chrome. See CONFSERVER-35911. You'll need to use a different browser for this step.

**Labels**

If you’d like all pages created using this template to have one or more labels, choose the labels icon next to the breadcrumbs at the top of the page to add them.

**Images and other attachments**

You can’t upload an image or other file into a template directly. First you’ll need to upload the file to a page in your site, then in your template, choose Insert > Files > Search on other pages to embed the file or image.

**Instructional text**

Instructional text is placeholder content in a template, and is only visible while you're editing the page. Use it to give guidance to whoever is creating a page from the template.

**To insert instructional text:**

1. Choose Template > Instructional Text in the toolbar
2. Type in your instructional text (for example, *Insert an image of the interface here.*)

Instructional text appears in italics with a shaded background, to distinguish it from normal paragraph text.

You can also change the placeholder type from **Text** to either:

- **User mention** – Opens the user mention dialog.
- **Jira Macro** – Opens a dialog that allows you to create a new Jira issue, or search for one or more Jira issues to include on the page.

**Add a description to your template**

The template description displays in the 'Create' dialog, and is useful for explaining the purpose of your template to other users.

**To add a description to a template:**

- Go to the space or global templates page (as described above)
- Choose the **Edit** icon in the 'Description' column
- Enter your description and choose **Save**

![User Created Templates table]

1. **Edit**: use the pencil icon to edit your template's description.

**Edit or delete a template**

If you need to change anything about your template, or want to delete it, navigate to either your space or global template (as described above) and choose either **Edit** or **Delete**.

**Notes**

- Page templates are used only when adding a page. It is not possible to apply a template to an already-existing page. Once a page has been added using a template, the template is no longer linked to the page. All further editing is performed as if the template was never used. Some Marketplace apps provide enhanced template functionality. You can search the Atlassian Marketplace for template apps.
- When you use a **Table of Contents macro** in a template, you'll see an error when you preview the template, but the Table of Contents macro works on the pages that people create from the template.
- The editor for templates is available only in **Confluence 4.3 and later**. Please refer to the earlier documentation for a description of the wiki markup editor templates.
- Confluence also provides 'system templates' containing content like the site welcome message and default space content. See **Administering Site Templates**.

**Create a Page from a Template**

You can create a page based on a global template (available to all spaces) or a space template (available only to that space).

If you want to quickly create a blank page, hit the **Create** button in the header; if you want to create a page from a template, hit the **Create from template** button.

1. **Create blank page**
2. Create from template

Information copied from the template to the page

When you create a page based on a template, Confluence will copy the following content and information from the template to the new page:

- Labels
- Text and styles
- Layouts and formatting
- Macros
- Embedded images and other files. Note that you cannot attach an image or other file to a template. But if the template displays an image or file from another page, the new page will display that image or file too.

Form fields displayed by the template

If the template author included variables in the template, Confluence will display a form prompting you to supply values for the variables when you add the page.

Using a template to create a page

To create a page based on a template:

1. Choose Create from template
   
   in the Confluence header

2. Select a space and the template you want to use and choose Next
   
   If the template contains variables, you'll see a form allowing you to add values for the form variables.

3. Type the relevant information into the form fields, and choose Next
   
   Now you'll see a new page based on the template. If you added information in the form fields, the page content will include that information.

4. Name your page, add content or make any other changes required and hit Save

Screenshot: Form showing template variables when creating a page from a template
Page templates are used only when adding a page. It is not possible to apply a template to an already-existing page. Once a page has been added using a template, the template is no longer linked to the page. All further editing is performed as if the template was never used. Some Marketplace apps provide enhanced template functionality. You can search the Atlassian Marketplace for template apps.

**Blueprints**

**What’s a blueprint?**

A blueprint is a set of page templates with added functionality to help you create, manage and organize content in Confluence more easily.

Create meeting notes, shared file lists and requirements documentation out of the box, and Customize the blueprint templates to suit your individual needs. You can even develop your own blueprints.

**Create content using a blueprint**

1. Choose **Create from template**

   in the Confluence header
2. Select a blueprint from the create dialog
3. Hit **Create**

The editor will open, and, depending on the blueprint selected, a prompt to enter information or the page will appear. You can now follow the instructions built in to the blueprint to add content.
The first time a blueprint is used in a space, Confluence creates an index page and adds a shortcut to your sidebar (if you’re using the default theme). The index displays a list of pages made with the blueprint, and information selected from your blueprint pages. For example, the meeting notes index displays a list of all meeting notes pages in the space, who created them, and when they were last modified. Here’s the index page for the Meeting Notes blueprint:

1. **Easy to find**: notes from all your meetings are listed here.
2. **Start a new meeting**: create a new meeting notes page here.

**Customize blueprint templates**

Blueprints are made up of templates that can often be customized for an individual space or the whole site. This means you can adapt the content of the blueprint pages to suit your specific needs. For example, you
might update the Meeting Notes blueprint templates to include a heading for apologies.

If you have space administrator permissions, you can customize blueprint templates for the spaces you are an administrator of. You must be a Confluence Administrator to customize blueprint templates for a whole site. See Administering Site Templates for more information.

To customize a blueprint template for a space:

1. Go to the space and choose Space tools > Content Tools from the bottom of the sidebar
2. Choose Edit beside the blueprint template you wish to edit
3. Make your changes to the template and choose Save

Editing a blueprint template is very similar to editing a page template, except:

- Be careful not to remove any macros that the blueprint page or index page may use to store and display information
- You can't remove a blueprint template or change the template name
- Not all blueprints are customizable. Some, including the Team Playbook blueprints (health monitor, DACI, project poster, and experience) can't be edited.

To reset a blueprint template back to the default:

1. Go to the space and choose Space tools > Content Tools from the bottom of the sidebar
2. Choose Reset to default beside the blueprint template you wish to reset

See Working With Templates and Administering Site Templates for more information on templates.

As with user created space and site templates, editing a blueprint template will not change existing pages, but any new blueprint pages will be based on the updated template.

Promote blueprints in the Create dialog

If you're a space administrator, you can choose to promote specific templates and blueprints in the Create dialog. Promoting items can help ensure consistency in a space by encouraging users to create particular types of content, instead of blank pages.

The promoted templates or blueprints will appear at the top, with all other content types, including Blank Page and Blog Post collapsed under them. To view the other types of content available choose the Show more link.

1. **Show more**: see more templates and blueprints.

To promote a template or blueprint:

1. Go to Space Tools > Content Tools
2. Choose Promote next to the templates or blueprints you want to appear in the Create dialog. You can only promote templates created in this space.

Remember, by promoting a blueprint or template you'll be hiding all other items, including blank page and blog post, under the Show more link.

If you use the Show more link in the create dialog more than three times in a single space, the dialog will show you all templates by default from then on.

Add more blueprints
You can find more blueprints for Confluence in the Atlassian Marketplace. Blueprints are managed using apps (also known as add-ons, or plugins).

See Request Marketplace Apps for information on how you can search for new blueprint apps and send a request to your System Administrator.

If you are a System Administrator, see Managing System and Marketplace Apps for information on how to install new blueprint apps.

You can also develop your own blueprints. See our developer documentation on Writing a Blueprint.

Disable a blueprint

You may want to disable particular blueprints. For example, you may not want to see the Product Requirements blueprint in the create dialog in an HR or Social space. If you are a Confluence Administrator you can also disable particular page and space blueprints for the whole site.

To disable a blueprint in a space:

- Go to the space and choose Space tools > Content Tools from the bottom of the sidebar
- Choose Disable next to the blueprint you wish to disable in that space

You can re-enable the blueprint at any time.

To disable a blueprint across a whole site:

- Choose the cog icon
- , then choose General Configuration (You need Confluence Administrator permissions to do this)
- Choose Global Templates and Blueprints
- Choose Disable next to the page or space blueprint you wish to disable

The blueprint will not appear in the 'Create' or 'Create Space' dialogs.

Full list of blueprints

Here's the full list of blueprints bundled with Confluence.

<table>
<thead>
<tr>

Decisions Blueprint

The Decisions blueprint helps you make decisions and record the outcomes with your team.

The first time you use the Decisions blueprint in a space, Confluence will create an index page and add a shortcut on your space sidebar (if you’re using the default theme). The index acts as your Decision Log and lists all the decisions in that space.
To create a decision page:

1. Choose **Create from template** in the Confluence header
2. Select **Decision** and hit **Next**
3. Enter information about the decision and relevant stakeholders (the blueprint will prompt you) and hit **Create**

Once you save your first decision page, Confluence will create a decision log page for the space you're in, and add a shortcut to it in the space's sidebar.

Here’s how the decisions page looks in the editor:

Once you save your first decision page, Confluence will create a decision log page for the space you're in, and add a shortcut to it in the space's sidebar. The decision log lists all the decisions in that space.

1. **Decision pages:** your existing decisions appear here.
2. **More decisions:** create new pages using the decision template.

The Decisions blueprint uses these Confluence features:
• Page Properties and Page Properties Report macro - content that you enter within the page properties macro can appear on the index page.
• Mentions - add a user as a stakeholder, owner or @mention them on the page and they will be notified in their workbox.

For an example of the Decisions Blueprint, and some other great page elements, check out: How to make better decisions as a development team.

Customizing this blueprint

You can customize the templates that are used by the Decisions blueprint - see Customizing the blueprint templates. For example, you might choose to edit the decisions index page in a space to change the columns displayed by the Page Properties Report macro.

You can also edit the page template to add headings or instructional text to the background section, or even add rows to the Page Properties macro. For example, a row for the date the decision was made.

See Instructional text to find out more about using instructional text in templates.

File List Blueprint

The File List blueprint helps you to create lists of files to share with your team. Great for organizing documents, images and presentations.

The first time you use the File List blueprint in a space, Confluence will create an index page and add a shortcut to your space sidebar (if you're using the default theme). The index page lists the latest File List pages in that space. You can have as many File List pages as you need.

To create a file list:

1. Choose Create from template
2. Select File List and hit Next
3. Enter the details for your file list and hit Create
4. Drag files from your desktop or choose browse for files to search for files on your computer

Here's an example of a file list page:
1. **Expand**: view each file’s details and preview.
2. **Upload and download**: drop files to upload, and download all files.
3. **Version history**: see and manage other file versions.

Attachments appear on the page, and you can expand each attachment to preview the file and/or view its details.

In this example, we’ve created three file list pages to store project-related presentations, images and customer feedback. Confluence looks after the versioning of the files, so there’s no need to use the document file name to mark version numbers.

Once you save your page, Confluence will create an index page and add a shortcut to your space sidebar. The index page lists the latest File List pages in the space. Create as many File List pages as you need.

1. **Space shortcut**: a quick way to find all of your file lists in this space.
2. **Create a new list**: create more file lists in this space.
3. **Current file lists**: see all the file lists in this space.

**Customizing this blueprint**

You can customize the templates that are used by the File List blueprint - see Customizing blueprint.
templates.

The File List blueprint template uses the attachments macro. You can customize the macro to change the sort order or hide features such as version history and the upload attachment fields.

You can also edit the Content Report Table macro used on the Index page to specify the number of pages you want to display.

Meeting Notes Blueprint

The Meeting Notes blueprint helps you to plan your meetings and share notes and actions with your team.

The first time you use the Meeting Notes blueprint in a space, Confluence will create an index page and add a shortcut on your space sidebar (if you are using the default theme). The index page lists the latest Meeting Notes pages in that space.

If you want to quickly create a blank page, hit the Create button in the header; if you want to create a page from a template, hit the Create from template button.

1. Create blank page
2. Create from template

To create a meeting notes page:

1. Choose Create from template

   in the Confluence header

2. Select Meeting Notes and hit Next
3. Enter the information required by the template and hit Create
4. Save your page and get ready to attend your meeting

You can edit the page during or after your meeting, and enter your notes, action items and @mention users to assign tasks to them.

Screenshot: A Meeting Notes index page

2015-05-04 Meeting notes

Date
04 May 2015

Attendees
- Gil User
- @mention a person to add them as an attendee and they will be notified.

Goals
- Set goals, objectives or some context for this meeting.

Discussion items

<table>
<thead>
<tr>
<th>Time</th>
<th>Item</th>
<th>Who</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>5min</td>
<td>Agenda item</td>
<td>Name</td>
<td>Notes for this agenda item</td>
</tr>
</tbody>
</table>

Action items

Type your task here. Use "@" to assign a user and "/'" to select a due date.
The Meeting Notes blueprint uses some cool Confluence features:

- **Instructional text** - this handy text prompts you to enter information and disappears when you start typing or view the page.
- **Mentions** - @mention a user on the page and they will be notified in their workbox.
- **Task lists** - @mention a user in a task to assign it to them – the task will appear as a personal task in their workbox. You can also add a due date by typing //, then choosing a date from the calendar.

Customizing this blueprint

You can customize the templates that are used by the Meeting Notes blueprint – see Customizing the blueprint templates.

You might choose to edit the headings or add additional headings, or change the instructional text that prompts users to enter information to suit your context. To find out more about using instructional text in a template, see Instructional text.

You can also edit the Content Report Table macro used on the Index page to specify the number of pages you want to display.

**Product Requirements Blueprint**

The Product Requirements blueprint helps you to define, scope and track requirements for your product or feature.

Learn more about writing downsized product requirements

The first time you use the Product Requirements blueprint in a space, Confluence will create an index page and add a shortcut on your space sidebar (shortcut only available in the default theme). The index lists all the Product Requirements pages in that space, and displays a summary of the information on each page (such as status and owner). You can have as many Product Requirements pages as you need.

If you want to quickly create a blank page, hit the Create button in the header; if you want to create a page from a template, hit the Create from template button.

1. Create blank page
2. Create from template

To create a requirements page:

1. Choose Create from template

   ... in the Confluence header

2. Select Product Requirements and hit Next

3. Enter information about your product or feature (the instructional text will prompt you) and hit Create

You can @mention team members to bring them into the conversation about the page.

In this example we've created a series of Product Requirements pages. The index page shows summary information about each one.
1. **New requirements**: create more requirements pages in this space.
2. **Requirements pages**: see the existing requirements pages in this space.

Here’s how a requirements page looks in the editor:

![Requirements page example](image)

The Product Requirements blueprint uses these Confluence features:

- **Page Properties** and **Page Properties Report** macro - content that you enter within the page properties macro can appear on the index page.
- **Instructional text** - this handy text prompts you to enter information or create a Jira issue and disappears when you start typing or view the page.
- **Mentions** - @mention a user on the page and they will be notified in their workbox.

Customizing this blueprint

As no two products or projects are alike, you can customize the templates that are used by the Product Requirements blueprint - see [Customizing the blueprint templates](#).

You might choose to edit the **index** page in a space to change the columns to be displayed by the Page Properties Report macro.

You might choose to edit the **page template** to:

- edit the headings or add additional headings
- change the instructional text that prompts users to enter information to suit your context
- add or remove rows within the Page Properties macro.

See [Instructional text](#) to find out more about using instructional text in templates.

**Shared Links Blueprint**

The Shared Links blueprint helps you take content from the web and share it
with your team. You can use Shared Links to share and collaborate on web content, or to create a centralized repository of useful links.

The first time you use the Shared Links blueprint in a space, Confluence will create an index page and add a shortcut on your space sidebar (if you're using the default theme). The index lists all the shared links in that space.

If you want to quickly create a blank page, hit the Create button in the header; if you want to create a page from a template, hit the Create from template button.

1. Create blank page
2. Create from template

To create a shared links page:

1. Choose Create from template
2. Select Share a link and hit Next
3. Enter the URL of the web content you want to share, then hit Create

You can also:

- Include topics to help categorize your links – these are added as labels to your page.
- Share the link immediately with another user or group – users will receive a notification.
- Add a comment to start the discussion.

To make sharing links even faster, you can add a Share on Confluence button to your browser’s toolbar. Click this button and the webpage you’re currently viewing will be added as a shared link!

To add the Share on Confluence button to your browser:

1. Choose Create from template
2. Drag the Share on Confluence button to your browser toolbar

Now, when you want to share a link in Confluence, choose the Share on Confluence button in your browser and follow the prompts.

Screenshot: Share a link from the Create dialog.
Jira Report Blueprint

The Jira Report blueprint helps you create easy to read reports to communicate the progress of your Jira Software projects and releases. You can choose from a Change Log report that generates a list of Jira issues or a Status Report that includes charts to visually communicate your progress.

The first time you use the Jira Reports blueprint in a space, Confluence will create an index page and add a shortcut on your space sidebar (if you're using the default theme).

If you want to quickly create a blank page, hit the Create button in the header; if you want to create a page from a template, hit the Create from template button.

1. Create blank page
2. Create from template

To use the Jira Report Blueprint your Confluence and Jira application (such as Jira Software) must be connected via Application Links.

Create a Change Log

The Change Log report displays a list of issues from your Jira application. This list can be static or dynamic, automatically updating as the status of your issues change in Jira.

To create a static change Log:

1. Choose Create from template

   in the Confluence header
2. Select Jira report and hit Next
3. Select a **Change log** and hit **Next**
4. Enter the information required for the change log and hit **Create**

A report page will be created with sample text and a list of all issues for the project and fix versions selected, organized by issue type. This list of issues is static; it won't be updated when the issues are updated, and is visible to users who don't have Jira access or permissions to view that project.

**Screenshot: Creating a Change Log in simple mode.**

![Change log](image)

**Screenshot: Static list of Jira Issues displaying in the Change Log.**

![All updates for this release](image)

**To create a dynamic change log:**

1. Choose **Create from template**
   - **Create** in the Confluence header
2. Select **Jira report** and hit **Next**
3. Select a **Change log** and hit **Next**
4. Choose **Switch to advanced**
5. Enter a JQL query or paste in the URL of a Jira search (find out about using JQL in the [JIRA Documentation](https://confluence-docs.atlassian.com))
6. Hit **Create**

A report page will be created with sample text and a Jira issues macro that's configured to show your issues. The macro is dynamic and will update when the issues are updated. For more information on changing the information displayed, refer to the [JIRA Issues macro](https://confluence-docs.atlassian.com).

**Screenshot: Dynamic list of Jira Issues displaying in the Change Log.**
Create a Status Report

The Status Report displays the progress of a Jira project and fix version in pie charts by status, priority, component and issue type. The Status Report uses the Jira Chart macro, and is dynamic.

To create a status report:

1. Choose Create from template
   
   in the Confluence header

2. Select Jira report and hit Next

3. Select a Status report and hit Next

4. Enter the information required for the report and hit Create

A report page will be created with sample text and a series of pie charts, using the Jira Chart macro. The macro is dynamic and will update when the issues in Jira are updated. For more information refer to the JIRA Chart macro.

As with the Change Log, you can switch to Advanced mode and use JQL or paste in a Jira URL to search for issues to display in the report.

Screenshot: Excerpt from the Status Report.

Customizing this blueprint

You can customize the templates used by this blueprint. The Change Log uses the Snapshot Jira Report
**Retrospective Blueprint**

Retrospective pages help you track team successes and opportunities after projects or at the end of a sprint. Use this blueprint to document what went well, what needed improvement, and assign actions for the future.

The first time you create a retrospective page in a space, Confluence will automatically create an 'index' page, which will list all retrospectives in the space, and add a shortcut to it in the space sidebar.

If you want to quickly create a blank page, hit the Create button in the header; if you want to create a page from a template, hit the Create from template button.

To create a retrospective page:

1. Choose Create from template
   ![Create button](image)
   in the Confluence header
2. Select Retrospective and hit Next
3. Add participants, change the title if you want to and click Create

![Screenshot: The 'retrospective' template page](image)
The Retrospective blueprint uses the following Confluence features:

- **Page Properties** and the Page Properties Report macro make content listed within the macro visible on the index page.
- **Instructional text** prompts you to enter information and disappears when you start typing or view the page.
- **Mention** a user on the page to notify them in their workbox.

Check out how the retrospectives blueprint can be used in the article [Create sprint retrospective and demo pages (like a BOSS)](https://confluence.atlassian.com/pages/modify).

**Customize this blueprint**

Every team conducts retrospective meetings differently, so you can customize the Retrospective blueprint template to match your team's culture and practices. You can:

- Edit headings and pre-populated text
- Add instructional text to capture specific information
- Add additional sections and content

See [Customize blueprint templates](https://confluence.atlassian.com/pages/modify) for instructions.

**How-To Article Blueprint**

The How-To Article blueprint helps you to provide step-by-step guidance for completing a task.

**To create a How-To Article page:**

1. Choose **Create from template**
2. Select **How-To Article** and hit **Next**
3. Enter the article name and some labels and hit **Create**

If you want to quickly create a blank page, hit the **Create** button in the header; if you want to create a page from a template, hit the **Create from template** button.
Once you save your page, Confluence will create an index page and add a shortcut to your space sidebar. The index lists all the How-To Article pages in that space, and displays a summary of the information on each page (such as creator and modified).
The How-To Article blueprint uses some cool Confluence features:

- **Instructional text** - Prompts you to enter information and disappears when you start typing or view the page.
- **Content by Label Macro** - Displays lists of pages that have particular labels, to let you collect related pages together.
- **Page Properties Macro** - This works together with the Page Properties Report Macro to automatically create a list of 'related issues' on each article.

Customizing this blueprint

You can customize the templates used by the How-To Article blueprint - see Customizing the blueprint templates. For example, you might choose to edit the How-to index page in a space to change the columns displayed by the Page Properties Report macro.

You can also edit the page template to add headings or instructional text to the background section, or even add rows to the Page Properties macro. For example, a row for the date the How-To Article was created.

See Instructional text to find out more about using instructional text in templates.

**Troubleshooting Article Blueprint**

The Troubleshooting Article blueprint helps you to provide solutions for commonly-encountered problems.

**To create a Troubleshooting Article page:**

1. Choose Create from template
   ![Create button]
   in the Confluence header
2. Select Troubleshooting Article and hit Next
3. Enter the article name and some labels and hit Create

If you want to quickly create a blank page, hit the Create button in the header; if you want to create a page from a template, hit the Create from template button.

1. Create blank page
2. Create from template

*Screenshot: A blank Troubleshooting Article page showing instructional text*
Once you save your page, Confluence will create an index page and add a shortcut on your space sidebar. The index lists all the Troubleshooting Article pages in the space, and displays a summary of the information on each page (such as creator and modified).

The Troubleshooting Article blueprint uses some cool Confluence features:

- **Instructional text** - Prompts you to enter information and disappears when you start typing or view the page.
- **Content by Label Macro** - Displays lists of pages that have particular labels, to let you collect related pages together.
- **Page Properties Macro** - This works together with the Page Properties Report Macro to automatically create a list of 'related issues' on each article.

Customizing this blueprint

You can customize the templates used by the Troubleshooting Article blueprint - see Customizing the blueprint templates. For example, you might choose to edit the decisions index page in a space to change the columns displayed by the Page Properties Report macro.

You can also edit the page template to add headings or instructional text to the background section, or even add rows to the Page Properties macro. For example, a row for the date the Troubleshooting Article was created.
See **Instructional text** to find out more about using instructional text in templates.

You can also edit the **Content Report Table** macro used on the Index page to specify the number of pages you want to display.

**Create a Blueprint-Style Report**

Using a combination of templates and macros you can make a wide range of reports for managing anything from customer interviews, product requirements to IT service catalogs and more. In this tutorial we'll guide you through the process of creating a blueprint-style report.

In this example, we'll create a multi-team status report. Here's the scenario we'll use for this tutorial.

<table>
<thead>
<tr>
<th>The Design, Development and QA teams working on the Blue Sky Project need to produce a short status update page each week, containing the focus area for the week, contact person, risks and overall status for each team. They like the way the Product Requirements blueprint works and want to be able to manage their status updates in a similar way.</th>
</tr>
</thead>
</table>

**What do each of the players want out of this report?**

- **Project Lead** – Wants an at-a-glance report that shows only the status for each team.
- **Team Leads** – Want a summary report, including the focus areas and risk, just for their team.
- **All team members** – Want it to be easy to create the new page each week.
- **Management Team** – Want to see all the details for a week on one page, and don’t want to have to look at a different page for each team.

With this scenario in mind, this tutorial will guide you through how to:

1. Create a status update template containing a separate page properties macro for each team's section of the report.
2. Create a high level status report, showing just the status of all teams.
3. Create a summary report for each team.
4. Create your first status update page.

You'll need Space Administrator permissions to complete some of the steps in this tutorial.

**Part 1: Create a status update template**

First we’ll create a page template and add the Page Properties macros.

1. Go to **Space Admin > Content Tools > Templates**
2. Choose **Create Template**
3. Give the template a name (in this example the template will be called ‘Status Update’)
4. Add the skeleton of your status report to the page
5. Choose the label icon
   - **Screenshot: Adding teams to our status update template**
Now we'll add a Page Properties macro to record the status of the Design team.

6. Choose Insert > Other Macros > Page Properties to add the Page Properties macro to the page
7. In the macro body create a two column table and remove the heading row
8. In the left column enter the column headings for your report (these are known as metadata 'keys')
   In this example we'll add 'Design Focus', 'Design Status', 'Design Contact' and 'Design Risks').
9. In the right column, leave the cells blank, or enter some instructional text to prompt your users (Choose Template > Instructional Text)
   We've also added a status macro.
10. Edit the Page Properties macro and enter a Page Properties ID for this macro (in this example we'll use 'status-update-design'. This will allow us to report on the status of just the Design team later on)
    Repeat this process for the Development and QA teams, remembering to specify a different ID for each macro (we used 'status-update-dev' and 'status-update-qa').
11. Finally, add any other headings, instructional text or content to your template and Save.
    You can enter a Description for your template - this appears in the Create dialog.

Screenshot: Our status update template
Part 2: Create a report showing the high level status of each team

Next we'll create an index page, just like you see in many blueprints.

1. In your space create a new blank page (this will be our 'Status Report - all teams' page, showing just the status of each team)
2. Choose Insert > Other Macros > Page Properties Report to add the Page Properties Report macro to the page
3. Enter the Label to report on (in this example, it'll be the 'status-update' label we added to the template page)
4. Leave the Display options > Page Properties ID field blank (we want to report on all the macros on the page)
5. In the Columns to Show field, list the 'keys' from each macro that you want to include in the report (in this example, we only want to show the values of 'Design Status', 'Dev Status', 'QA Status')
6. Choose Save to add the macro to the page

Screenshot: The page properties report macro on the 'Status Report - all teams' page
Now we’ll add a button to the page to allow team leads to easily create new status update pages from the template we created earlier.

7. Choose **Insert > Other Macros > Create from Template** to add the Create from Template macro to the page

8. Enter the text for the button (in this example we'll call the button 'New Status Update Page')

9. Select the template from the **Template Name** drop down (in this example our template was called 'Status Update')

10. Specify the title of any pages to be created (This is a great way to keep your titles consistent. In this example we'll call the page 'Status update week ending @currentDate', which will append the current date when the page is created, as in the meeting notes blueprint)

11. Choose **Insert**

12. Add any other content, links or images to the page and **Save**

13. Choose **Space Tools > Configure Sidebar > Add Link** to add a shortcut to the page on the sidebar

**Part 3: Create a separate report for each team**

Now we'll create some index pages that show a more detailed summary for each team, starting with the Design team.

1. Create a new blank page – this will be the 'Design Status Report' index page, showing just information for that team.

2. Choose **Insert > Other Macros > Page Properties Report** to add the Page Properties Report macro to the page

3. Enter the **Label** (the page label is once again 'status-update', the label we added to the template)

4. Expand the **Display options** and enter the **Page Properties ID** that was specified in the Page Properties macro in the template (in this example it was 'status-update-design') – this allows us to report on just information in that macro.

5. Leave all of the other fields blank (we want to show all columns from this Page Properties macro)

6. Choose **Save** to add the macro to the page

*Screenshot: The page properties report macro on the 'Design Status Report' index page*
7. Add any other content, links or images to the page and **Save**
8. Choose **Space Tools > Configure Sidebar > Add Link** to add a shortcut to the page on the sidebar
9. Create a new page and repeat this process for each team

   Remember to specify a different Page Properties ID each time (in this example 'status-report-dev' and 'status-report-qa').

If your Design, Dev and QA teams have their own team spaces, this summary report could even be created in their team spaces. Just be sure to specify the space where the Status Updates pages are created in the **Restrict to spaces** field, to make sure the macro can find the pages to report on.

**Part 4: Create your first status update page**

**That's it!** Create from template

in the Confluence header, then select **Status Update**, or use the **Create a new status update** button to make your first status update page. Just like a blueprint, but 100% made by you.

Here’s how our finished pages look.

*Screenshot: Team Leads and the management team still have a single page for the weekly status update*
Screenshot: The Project Lead can see the status of each team, each week, at a glance in the All Teams status report.

Screenshot: Each team can see their focus, risks and status at a glance in their status report.
Remember, these concepts don’t just apply to status updates – you can use them for any purpose at all.

**Import Content Into Confluence**

There are a number of ways you can get existing content, such as text, images and other content into Confluence.

**Import content from other Confluence sites**

To import content from another Confluence site you can:

- Import a backup of the entire Confluence site
- Import an XML export of an individual space. Page history, attachments, and page content will be preserved.

See [Restoring a Site](#) and [Restoring a Space](#) for more information.

**Import content from a Microsoft Word document**

The Office Connector allows you to create pages by importing Word documents. The document content is copied onto one or more Confluence pages. See [Import a Word Document into Confluence](#).

**Import web content**

To embed web content on a page:

- Use the Widget Connector Macro to display videos, slide shows, twitter chats, documents and more, sourced from other web sites and displayed on your Confluence page.
- Embed an external web page into Confluence with the HTML Include macro.
- Use HTML code in a page with the HTML macro.

Note: The HTML macro is not enabled in all sites. Talk to your Confluence Admin about whether you can use this macro.

**Importing content from another wiki**

Confluence does not provide a method for importing content from another wiki.

You may be able to build your own import solution using our REST APIs, as mentioned below, or work with an [Atlassian Solution Partner](#) to develop a custom solution.

**Import other content**
Importing non-wiki markup into Confluence requires a conversion process:

- Text with basic formatting can be pasted directly into the editor. This includes simple Word documents or web pages.
- Confluence pages saved to disk can be imported from disk.
- Files can be uploaded in bulk using the Confluence WebDav Plugin. See Use a WebDAV Client to Work with Pages.
- Build your own import solution using the Confluence APIs.

**Import a Word Document into Confluence**

The Office Connector allows you to import Word documents and create one or more Confluence pages from the content.

You can create a single page, or divide the contents up into multiple pages, based on the headings in your document.

This is useful if you have a lot of content stored in existing documents, or if you are migrating from another system or platform that allows you to export to Word format.

**Import a Word document**

To import a Word document in Confluence:

1. Create a page in Confluence or go to an existing page (you want to view the page, not edit it).
2. Choose
   ***
   > Import Word Document
3. Choose Browse and locate the Word document you want to import, then choose Next.
   The import document options appear.
4. Enter a title for the new page (useful if you don’t want to use the file name as your page title).
5. Choose where you want to import the file (as a brand new page, or overwriting an existing page with the same title).
6. Choose how to handle title conflicts (rename the new pages or replace existing pages).
7. Choose whether to create a single page or multiple pages based on the heading styles in the file (this option is only available if the file contains heading styles).
8. Click Import.

When the upload has finished, pages will be created with the content of the Word documents. You can then view and edit this page as normal. There’s no connection between the original Word document and this page.

**Import options**

There are a number of options when importing a Word document that control how pages are created, whether the import should overwrite existing pages in the space, and how it should handle page name conflicts.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Root page title</td>
<td>This is the title of the page that will be created or updated by the import.</td>
</tr>
<tr>
<td>Where to import</td>
<td>Controls whether the document is imported into the current page (the page you were viewing when you selected Tools &gt; Import) or created as a new page. Choose from</td>
</tr>
<tr>
<td>----------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td></td>
<td>- <strong>Import as a new page in the current space</strong> - a new page will be created as a child of the space home page.</td>
</tr>
<tr>
<td></td>
<td>- <strong>Replace &lt;page name&gt;</strong> - content will be imported into the current page. The title of this page will change to the title you specified in the Root page title field.</td>
</tr>
<tr>
<td></td>
<td>- <strong>Delete existing children of &lt;pagename&gt;</strong> - any existing children of the current page will be removed when the content of the page is replaced.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Title conflicts</th>
<th>Controls how page name conflicts (a page with the same title already exists in the space) are handled.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>- <strong>Rename imported pages if page name already exists</strong> - new pages get a new name (a number added to the end of the page title). Existing pages will be unchanged.</td>
</tr>
<tr>
<td></td>
<td>- <strong>Replace existing pages with imported pages of the same title</strong> - overwrite the content of existing pages. The change will be shown in the Page History for the page.</td>
</tr>
<tr>
<td></td>
<td>- <strong>Remove existing pages with the same title as imported pages</strong> - remove original pages and then create new pages. The change is not shown in the Page History for the page.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Split by heading</th>
<th>If the document contains Word heading styles you can choose to create multiple pages based on the heading. Options are:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>- <strong>Don't split</strong> - creates a single page.</td>
</tr>
<tr>
<td></td>
<td>- <strong>Level Headings</strong> - creates multiple pages in a hierarchy based on the heading levels in the document.</td>
</tr>
</tbody>
</table>

A preview of the pages that will be created appears under **Document Outline**.

**Screenshot: Import Word options for a document that contains multiple heading levels.**

**Import Word Document: Configuration**

- **Root page title:** Outline doc
- **Where to import:** Import as a new page in the current space
  - Replace Temp
  - Delete existing children of Temp
- **Title conflicts:** Rename imported pages if page name already exists
  - Replace existing pages with imported pages of the same title
  - Remove existing pages with the same title as imported pages
- **Split by heading:** Don't split
- **Document Outline:** Outline doc
- **Import**

**Supported file types**

Confluence can import the content from Microsoft Word 97-2013 documents (.doc and .docx).

**Notes**

If your document contains characters that are the same as Confluence wiki markup (for example square
Orphaned Pages

An orphaned page is a page without any incoming links and is located at what's called the 'root of the space', meaning it sits alongside the space's home page. This means that, unless you know the page exists, you're not likely to come across it during the natural course of navigation.

There may be a legitimate reason you want to have a page at the root of a space. For example, you may be effectively hiding it in the navigation. If you don't want orphaned pages though, you can easily view all orphaned pages in a space so you can tidily delete the pages or reorganize them so they're no longer orphaned.

To view the orphaned pages in a space:

1. Go to the space and choose Space tools > Content Tools from the bottom of the sidebar
2. Choose Orphaned Pages.

While in the orphaned pages view, you can do any of the following:

- Delete an orphaned page by choosing the 'trash can' icon next to the page name.
- Edit a page by choosing the 'pencil' icon next to the page name.
- Give an orphaned page a parent — see Move and Reorder Pages.

Screenshot: Managing orphaned pages

<table>

</table>

Undefined Page Links

You can add links to pages that don't yet exist in Confluence, but you intend to create later. Known as links to 'undefined pages', they allow you to create a link which, when clicked, will create a page with the name you specify in the link.

Create an undefined page link

1. Choose Insert > Link or press Ctrl+K on your keyboard.
2. Choose Advanced.
3. Enter the name of the page to be created in the Link field.

A link to an undefined page is shown in dark red while in the editor. When anyone clicks the link, Confluence will create a new page with the name you typed in the Link field.

View undefined pages in a space
The **Undefined Pages** view shows you all undefined pages in your space. The undefined page links are badged with a ✓ icon to remind you that those pages are yet to be created.

**To view a list of the undefined links in a space:**

1. Go to the space and choose **Space tools > Content Tools** from the bottom of the sidebar.
2. Choose **Undefined Pages**.

You can choose the link for an undefined page to create the page and add content to it.

Links to pages that are in the trash are not considered undefined links, and will not appear in this list.

**View Page Information**

The Page Information view for a page shows you useful information about the page.

**To see the information about the page:**

1. View the page.
2. Choose

   ```plaintext
   ***
   > Page Information
   ```

You will see the following information:

- **Page details**: Title, author, date of creation, date of last modification and the tiny link (permalink) of the page.
- **Page hierarchy**: Parent-child relationships of the page.
- **Incoming links**: Lists other pages in your Confluence Site that have links to this page, or reference this page in an Include Page or Excerpt Include macro.
- **Labels**: Any labels (tags) that have been applied to this page. See *Add, Remove and Search for Labels*.
- **Page Permissions**: Displays page-level security restrictions that apply to the page (if present). See *Page Restrictions*.
- **Hot Referrers**: The external website pages which send the most viewers to the page. See *Trackback and External Referrers*.
- **Recent Changes**: Links to the five most recent versions of the page along with the name of the editor and the date of modification. See *Page History and Page Comparison Views*. Choose **View page history** to see the page history view, all the versions of the page in reverse chronological order and allows you to compare versions or to restore a previous version.
- **Outgoing links**: A summary of the links contained on this page, pointing to other pages on the Confluence site or to external websites.

Note: if there is no information to report (for example the page has no restrictions or no incoming links), that section of the Page Information won’t appear.

*Screenshot: Page information for this page*
Page History and Page Comparison Views

Confluence tracks the history of changes to each page by creating a new version of the page each time it's modified. You can view the changes between different versions, and roll back to a previous version if you need to.

Access the page history

To view the history of a page:

1. Go to the page and choose
   
   > Page History

2. Choose a version number to view the content of that version

Screenshot: Page history
Hover over each avatar to see the names of people who contributed changes in that version. It is not possible to view the individual changes made by each person in a single page version.

View an older version

When you select a previous version of the page, you'll see a header like this at the top of the page:

```
⚠️ You are viewing an old version of this page. View the current version.

Compare with Current • Restore this Version • View Page History
```

If you want to send this page version to someone, copy and paste the URL from your browser. The link will look something like this: http://confluence.atlassian.com/pages/viewpage.action?pageId=12345.

When you're viewing a specific version of the page, the following functions are available:

<table>
<thead>
<tr>
<th>Version</th>
<th>Published</th>
<th>Changed By</th>
<th>Comment</th>
<th>Actions</th>
</tr>
</thead>
<tbody>
<tr>
<td>CURRENT (v. 4)</td>
<td>Jan 31, 2018 10:16</td>
<td>Emma McRae</td>
<td>Final changes</td>
<td></td>
</tr>
<tr>
<td>v. 3</td>
<td>Jan 31, 2018 10:11</td>
<td>Ernad Abdil</td>
<td></td>
<td>Restore, Delete</td>
</tr>
<tr>
<td>v. 2</td>
<td>Jan 31, 2018 10:08</td>
<td>Emma McRae</td>
<td></td>
<td>Restore, Delete</td>
</tr>
<tr>
<td>v. 1</td>
<td>Jan 31, 2018 10:08</td>
<td>Cassie Owens</td>
<td></td>
<td>Restore, Delete</td>
</tr>
</tbody>
</table>

On this page:
- Access the page history
- View an older version
- Restore a previous version
- Delete a specific version
- View the changes made
- View unpublished changes
- Compare two versions
- More about the comparison view

Related pages:
- View Page Information
- Create and Edit Pages
- Watch Pages, Spaces and Blogs
<table>
<thead>
<tr>
<th>Function</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>current version</td>
<td>View the latest version of the page.</td>
</tr>
<tr>
<td><strong>Compare with Current</strong></td>
<td>Compare the differences between the version of the page you are viewing and the current version.</td>
</tr>
<tr>
<td><strong>Restore this Version</strong></td>
<td>Roll back the content of the page to the previous version that you are viewing.</td>
</tr>
<tr>
<td><strong>View Page History</strong></td>
<td>Return to the list of page versions.</td>
</tr>
<tr>
<td>&lt;&lt; Previous and Next &gt;&gt;</td>
<td>View the previous or next version of the page.</td>
</tr>
</tbody>
</table>

### Restore a previous version

1. Go to the page and choose  
   **> Page History**  
2. Choose **Restore this version** beside the version you want to restore (or at the top of the page if you've opened the version)  
3. Change the default change comment if necessary, and choose **OK**

ℹ️ All page history is retained; restoring an older version creates a copy of that version. For example, if you restore version 39, Confluence will create a copy of version 39 and the copy will become the new, current version.

If the page has an unpublished draft, the content of the draft will be lost when you restore a previous version. We'll warn you if there is an unpublished draft.

### Delete a specific version

Choose **Delete** next to a version in the page history, to remove that version.

### View the changes made

Using the page history view or the page information view, you can see the recent changes made to a page.

**To view recent changes made to a page:**

1. Choose  
   **> Page Information**  
   In the section titled 'Recent Changes' you'll see the most recent versions of the page, along with the date of their modification and the name of the modifying author.  
2. Choose **View Changes** beside the required version  
   The page comparison view is displayed, showing the differences between the selected and previous versions.

### View unpublished changes

When you're in the editor, you can see all changes since the page was last published. Go to  
**> View changes.**

Changes are not attributed to individual people. The avatars of everyone who has contributed will be shown at the top of the editor.
Compare two versions

1. Go to the page and choose
   \textit{Page History}
2. Choose the versions you want to compare by selecting the check boxes beside them
3. Choose \textit{Compare selected versions}

You'll see the page comparison view showing the differences between the selected versions. Changes are highlighted as follows:

<table>
<thead>
<tr>
<th>Highlighted color</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Green</td>
<td>Added content</td>
</tr>
<tr>
<td>Red</td>
<td>Deleted content</td>
</tr>
<tr>
<td>Blue</td>
<td>Changed formatting</td>
</tr>
</tbody>
</table>

\textit{Screenshot: Comparing changes}

More about the comparison view

When you view a page comparison, all large sections of unchanged text are hidden and reduced to an ellipsis (\ldots).

You can view page changes between versions which are adjacent to your current page comparison view. Click the link containing:

- \textless to view the page comparison with the earlier adjacent version
- \textgreater to view the page comparison with the more recent adjacent version

For example, if your page comparison view is between v. 30 and v. 34 of a page, you can view changes between:

- v. 29 and v. 30 by clicking \textless \textit{Changes from 29 to 30} \textgreater
- v. 34 and v. 35 by clicking \textit{Changes from 34 to 35} \textgreater
Confluence Markup

This section describes two types of markup found in Confluence:

- **Confluence storage format.** Confluence stores the content of pages and blog posts in an XHTML-based format. Advanced users can view the storage format of a page and even edit it, provided their Confluence site is configured to allow that.

- **Wiki markup.** Confluence allows data entry via a shorthand code called wiki markup. Some parts of the Confluence administration interface also accept wiki markup for defining content. For a description of the wiki markup syntax, see Confluence Wiki Markup. Wiki markup code examples for macros can be found in the documentation for each macro.

Confluence Storage Format

This page describes the XHTML-based format that Confluence uses to store the content of pages, page templates, blueprints, blog posts and comments. This information is intended for advanced users who need to interpret and edit the underlying markup of a Confluence page.

We refer to the Confluence storage format as 'XHTML-based'. To be correct, we should call it XML, because the Confluence storage format does not comply with the XHTML definition. In particular, Confluence includes custom elements for macros and more. We're using the term 'XHTML-based' to indicate that there is a large proportion of HTML in the storage format.

You can view the Confluence storage format for a given page by choosing ***

> View Storage Format. This option is only available if one of the following is true:

- You are a Confluence administrator.
- Your Confluence site has the Confluence Source Editor plugin installed and you have permission to use the source editor.
- If you would like to edit the storage format for a page, your Confluence system administrator will need to install the Confluence Source Editor plugin.
- Clarification of terminology: If you choose ***
  > View Source, you'll see the format used within the editor panel, not the storage format of the page.

### Headings

<table>
<thead>
<tr>
<th>Format type</th>
<th>In Confluence 4.0 and later</th>
<th>What you will get</th>
</tr>
</thead>
<tbody>
<tr>
<td>Heading 1</td>
<td><code>&lt;h1&gt;Heading 1&lt;/h1&gt;</code></td>
<td></td>
</tr>
<tr>
<td>Heading 2</td>
<td><code>&lt;h2&gt;Heading 2&lt;/h2&gt;</code></td>
<td></td>
</tr>
<tr>
<td>Heading 3</td>
<td><code>&lt;h3&gt;Heading 3&lt;/h3&gt;</code></td>
<td></td>
</tr>
</tbody>
</table>

Headings 4 to 6 are also available and follow the same pattern.

<td><code>&lt;sub&gt;subscript&lt;/sub&gt;</code></td>
<td><strong>subscript</strong></td>
</tr>
<tr>
<td>monospace</td>
<td><code>&lt;code&gt;monospaced&lt;/code&gt;</code></td>
<td><strong>monospaced</strong></td>
</tr>
<tr>
<td>preformatted</td>
<td><code>&lt;pre&gt;preformatted text&lt;/pre&gt;</code></td>
<td><strong>preformatted text</strong></td>
</tr>
<tr>
<td>block quotes</td>
<td><code>&lt;blockquote&gt; &lt;p&gt;block quote&lt;/p&gt; &lt;/blockquote&gt;</code></td>
<td><strong>block quote</strong></td>
</tr>
<tr>
<td>text color</td>
<td><code>&lt;span style=&quot;color: rgb(255,0,0);&quot;&gt;red text&lt;/span&gt;</code></td>
<td><strong>red text</strong></td>
</tr>
</tbody>
</table>
### Text breaks

<table>
<thead>
<tr>
<th>Format type</th>
<th>In Confluence 4.0 and later</th>
<th>What you will get</th>
</tr>
</thead>
<tbody>
<tr>
<td>New paragraph</td>
<td><code>&lt;p&gt;Paragraph 1&lt;/p&gt;</code>&lt;br&gt;<code>&lt;p&gt;Paragraph 2&lt;/p&gt;</code></td>
<td>Paragraph 1&lt;br&gt;Paragraph 2</td>
</tr>
<tr>
<td>Line break</td>
<td><code>Line 1 &lt;br /&gt; Line 2</code></td>
<td>Line 1&lt;br&gt;Line 2</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> Created in the editor using <strong>Shift + Return/Enter</strong></td>
<td></td>
</tr>
<tr>
<td>Horizontal rule</td>
<td><code>&lt;hr /&gt;</code></td>
<td></td>
</tr>
<tr>
<td>— symbol</td>
<td><code>&amp;mdash;</code></td>
<td>—</td>
</tr>
<tr>
<td>– symbol</td>
<td><code>&amp;ndash;</code></td>
<td>–</td>
</tr>
</tbody>
</table>

**Lists**

---

<table>
<thead>
<tr>
<th>Format type</th>
<th>In Confluence 4.0 and later</th>
<th>What you will get</th>
</tr>
</thead>
</table>
| Unordered list – round bullets | `<ul>
  <li>round bullet list item</li>
</ul>`                                                                 | • Round bullet list item          |
| Ordered list (numbered list) | `<ol>
  <li>numbered list item</li>
</ol>`                                                                 | 1. Ordered list item             |
| Task Lists          | `<ac:task-list>
  <ac:task>
    <ac:task-status>incomplete</ac:task-status>
    <ac:task-body>task list item</ac:task-body>
  </ac:task>
</ac:task-list>`                                                                | task list item                    |

### Links

<table>
<thead>
<tr>
<th>Format type</th>
<th>In Confluence 4.0 and later</th>
</tr>
</thead>
</table>
| Link to another Confluence page | `<ac:link>
  <ri:page ri:content-title="Page Title" />
  <ac:plain-text-link-body>
  <![CDATA[Link to another Confluence Page]]>
</ac:plain-text-link-body>
</ac:link>` |
| Link to an attachment | `<ac:link>
  <ri:attachment ri:filename="atlassian_logo.gif" />
  <ac:plain-text-link-body>
  <![CDATA[Link to a Confluence Attachment]]>
</ac:plain-text-link-body>
</ac:link>` |
| Link to an external site | `<a href="http://www.atlassian.com">Atlassian</a>` |
A note about link bodies

All links received from the editor will be stored as plain text by default, unless they are detected to contain the limited set of mark up that we allow in link bodies. Here are some examples of markup we support in link bodies.

An example of different link bodies

```xml
<ac:link>
  <!-- Any resource identifier -->
  <ri:page ri:content-title="Home" ri:space-key="SANDBOX" />
  <ac:link-body>Some <strong>Rich</strong> Text</ac:link-body>
</ac:link>

<ac:link>
  <ri:page ri:content-title="Plugin developer tutorial stuff"
          ri:space-key="TECHWRITING" />
  <ac:plain-text-link-body><![CDATA[A plain <text> link body]]></ac:plain-text-link-body>
</ac:link>

<ac:link>
  <ri:page ri:content-title="Plugin developer tutorial stuff"
          ri:space-key="TECHWRITING" />
  <!-- A link body isn't necessary. Auto-generated from the resource identifier for display. -->
</ac:link>
```

For rich content like images, you need to use `ac:link-body` to wrap the contents.
The markup tags permitted within the `<ac:link-body>` are `<b>`, `<strong>`, `<em>`, `<i>`, `<code>`, `<tt>`, `<sub>`, `<sup>`, `<br>` and `<span>`.

### Images

<table>
<thead>
<tr>
<th>Format type</th>
<th>In Confluence 4.0 and later</th>
<th>What you will get</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attached image</td>
<td><code>&lt;ac:image&gt;</code></td>
<td></td>
</tr>
<tr>
<td></td>
<td><code>&lt;ri:attachment ri:filename=&quot;atlassian_logo.gif&quot; /&gt;</code></td>
<td></td>
</tr>
<tr>
<td>External image</td>
<td><code>&lt;ac:image&gt;</code></td>
<td></td>
</tr>
</tbody>
</table>

Supported image attributes (some of these attributes mirror the equivalent HTML 4 IMG element):

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ac:align</td>
<td>image alignment</td>
</tr>
<tr>
<td>ac:border</td>
<td>Set to &quot;true&quot; to set a border</td>
</tr>
<tr>
<td>ac:class</td>
<td>css class attribute.</td>
</tr>
<tr>
<td>ac:title</td>
<td>image tool tip.</td>
</tr>
<tr>
<td>ac:style</td>
<td>css style</td>
</tr>
<tr>
<td>ac:thumbnail</td>
<td>Set to &quot;true&quot; to designate this image as a thumbnail.</td>
</tr>
<tr>
<td>ac:alt</td>
<td>alt text</td>
</tr>
<tr>
<td>ac:height</td>
<td>image height</td>
</tr>
<tr>
<td>ac:width</td>
<td>image width</td>
</tr>
<tr>
<td>ac:vspace</td>
<td>the white space on the top and bottom of an image</td>
</tr>
<tr>
<td>ac:hspace</td>
<td>the white space on the left and right of an image</td>
</tr>
</tbody>
</table>

### Tables

<table>
<thead>
<tr>
<th>Format type</th>
<th>In Confluence 4.0 and later</th>
<th>What you will get</th>
</tr>
</thead>
</table>
### Two column, two row (top header row)

```xml
<table>
  <tbody>
    <tr>
      <th>Table Heading Cell 1</th>
      <th>Table Heading Cell 2</th>
    </tr>
    <tr>
      <td>Normal Cell 1</td>
      <td>Normal Cell 2</td>
    </tr>
  </tbody>
</table>
```

### Two column, three rows, 2nd and third with merged cells in first row

```xml
<table>
  <tbody>
    <tr>
      <th>Table Heading Cell 1</th>
      <th>Table Heading Cell 2</th>
    </tr>
    <tr>
      <td rowspan="2">Merged Cell</td>
      <td>Normal Cell 1</td>
    </tr>
    <tr>
      <td colspan="1">Normal Cell 2</td>
    </tr>
  </tbody>
</table>
```
**Page layouts**

Confluence supports page layouts directly, as an alternative to macro-based layouts (using, for example, the `section` and `column` macros). This section documents the storage format XML created when these layouts are used in a page.

<table>
<thead>
<tr>
<th>Element name</th>
<th>In Confluence 5.2 and later</th>
<th>Attributes</th>
</tr>
</thead>
<tbody>
<tr>
<td>ac:layout</td>
<td>Indicates that the page has a layout. It should be the top level element in the page.</td>
<td>None</td>
</tr>
<tr>
<td>ac:layout-section</td>
<td>Represents a row in the layout. It must be directly within the <code>ac:layout</code> tag. The type of the section indicates the appropriate number of cells and their relative widths.</td>
<td>ac:type</td>
</tr>
<tr>
<td>ac:layout-cell</td>
<td>Represents a column in a layout. It must be directly within the <code>ac:layout-section</code> tag. There should be an appropriate number of cells within the layout-section to match the <code>ac:type</code>.</td>
<td>None</td>
</tr>
</tbody>
</table>

The recognized values of `ac:type` for `ac:layout-section` are:

<table>
<thead>
<tr>
<th>ac:type</th>
<th>Expected number of cells</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>single</td>
<td>1</td>
<td>One cell occupies the entire section.</td>
</tr>
<tr>
<td>two_equal</td>
<td>2</td>
<td>Two cells of equal width.</td>
</tr>
<tr>
<td>two_left_sidebar</td>
<td>2</td>
<td>A narrow (~30%) cell followed by a wide cell.</td>
</tr>
<tr>
<td>two_right_sidebar</td>
<td>2</td>
<td>A wide cell followed by a narrow (~30%) cell.</td>
</tr>
<tr>
<td>three_equal</td>
<td>3</td>
<td>Three cells of equal width.</td>
</tr>
<tr>
<td>three_with_sidebars</td>
<td>3</td>
<td>A narrow (~20%) cell at each end with a wide cell in the middle.</td>
</tr>
</tbody>
</table>

The following example shows one of the more complicated layouts from the old format built in the new. The word *(content)* indicates where further XHTML or Confluence storage format block content would be entered, such as `<>` or `<>` tags.
## Emoticons

<table>
<thead>
<tr>
<th>Format type</th>
<th>In Confluence 4.0 and later</th>
<th>What you will get</th>
</tr>
</thead>
<tbody>
<tr>
<td>Emoticons</td>
<td>&lt;ac:emoticon ac:name=&quot;smile&quot; /&gt;</td>
<td></td>
</tr>
<tr>
<td></td>
<td>&lt;ac:emoticon ac:name=&quot;sad&quot; /&gt;</td>
<td></td>
</tr>
<tr>
<td></td>
<td>&lt;ac:emoticon ac:name=&quot;cheeky&quot; /&gt;</td>
<td></td>
</tr>
<tr>
<td></td>
<td>&lt;ac:emoticon ac:name=&quot;laugh&quot; /&gt;</td>
<td></td>
</tr>
<tr>
<td></td>
<td>&lt;ac:emoticon ac:name=&quot;wink&quot; /&gt;</td>
<td></td>
</tr>
<tr>
<td></td>
<td>&lt;ac:emoticon ac:name=&quot;thumbs-up&quot; /&gt;</td>
<td></td>
</tr>
</tbody>
</table>
Resource identifiers

Resource identifiers are used to describe "links" or "references" to resources in the storage format. Examples of resources include pages, blog posts, comments, shortcuts, images and so forth.

<table>
<thead>
<tr>
<th>Resource</th>
<th>Resource identifier format</th>
<th>Notes:</th>
</tr>
</thead>
</table>
| Page       | `<ri:page ri:space-key="FOO" ri:content-title="Test Page"/>` | • `ri:space-key:` *(optional)* denotes the space key. This can be omitted to create a relative reference.  
  • `ri:content-title:` *(required)* denotes the title of the page. |
| Blog Post  | `<ri:blog-post ri:space-key="FOO" ri:content-title="First Post" ri:posting-day="2012/01/30" />` | • `ri:space-key:` *(optional)* denotes the space key. This can be omitted to create a relative reference.  
  • `ri:content-title:` *(required)* denotes the title of the page.  
  • `ri:posting-day:` *(required)* denotes the posting day. The format is YYYY/MM/DD. |
### Attachment

```xml
<ri:attachment ri:filename>
... resource identifier for the container of the attachment ...
</ri:attachment>
```

**Notes:**
- `ri:filename`: (required) denotes the name of the attachment.
- The body of the `ri:attachment` element should be a resource identifier denoting the container of the attachment. This can be omitted to create a relative attachment reference (similar to `[foo.png]` in wiki markup).

**Examples:**

#### Relative Attachment Reference

```xml
<ri:attachment ri:filename="happy.gif"/>
```

#### Absolute Attachment Reference

```xml
<ri:attachment ri:filename="happy.gif">
<ri:page ri:space-key="TST" ri:content-title="Test Page"/>
</ri:attachment>
```

### URL

```xml
<ri:url ri:value="http://example.org/sample.gif"/>
```

**Notes:**
- `ri:value`: (required) denotes the actual URL value.

### Shortcut

```xml
<ri:shortcut ri:key="jira" ri:parameter="ABC-123"/>
```

**Notes:**
- `ri:key`: (required) represents the key of the Confluence shortcut.
- `ri:parameter`: (required) represents the parameter to pass into the Confluence shortcut.
- The example above is equivalent to `[ABC-123@jira]` in wiki markup.

### User

```xml
<ri:user ri:userkey="2c9680f7405147ee0140514c26120003"/>
```

**Notes:**
- `ri:userkey`: (required) denotes the unique identifier of the user.
This screenshot shows a simple template:

<table>
<thead>
<tr>
<th>Variable name</th>
<th>Type</th>
<th>Values</th>
</tr>
</thead>
<tbody>
<tr>
<td>$MyText</td>
<td>Single-line text</td>
<td></td>
</tr>
<tr>
<td>$MyMulti</td>
<td>Multi-line text</td>
<td>Size: 5 x 100</td>
</tr>
<tr>
<td>$MyList</td>
<td>List</td>
<td>List items: Apples, Pears, Peaches</td>
</tr>
</tbody>
</table>

The XML export produces the following code for the template:
Instructional Text

Instructional text allows you to include information on how to fill out a template for an end-user (the person using creating a page from the template). Instructional text will:

- automatically clear all instructional text as the user types in a specific text block, and
- automatically trigger a @mention prompt for user selection (for 'mention' type instructional text).

Screenshot: Example of instructional text.

<ul>
  <li>This is an example of instruction text that will get replaced when a user selects the text and begins typing.</li>
</ul>

<pre><ac:placeholder>This is an example of instruction text that will get replaced when a user selects the text and begins typing.</ac:placeholder></pre>

<ac:task-list>
  <ac:task>
    <ac:task-status>incomplete</ac:task-status>
    <ac:task-body>@mention example. This placeholder will automatically search for a user to mention in the page when the user begins typing.</ac:task-body>
  </ac:task>
</ac:task-list>
Confluence Wiki Markup
This page describes the wiki markup used on some administration screens in Confluence.

Wiki markup is useful when you want to do one of the following:

- Type wiki markup directly into the editor. Confluence will convert it to the rich text editor format as you type.
- Create links using the Advanced tab of the Links Browser.
- Add custom content to the sidebar, header or footer of a space.
- Insert a block of wiki markup (or markdown) into the Confluence editor. (Choose Insert > Markup.)

**Note:** You cannot edit content in wiki markup. Confluence does not store page content in wiki markup. Although you can enter wiki markup into the editor, Confluence will convert it to the rich text editor format immediately. You will not be able to edit the wiki markup after initial entry.

**Can I type wiki markup into the editor?**

Yes. You can type wiki markup directly into the editor, and Confluence will convert it as you type. (You cannot edit the wiki markup after conversion.) See it in action in this video:

**Can I insert markdown?**

Confluence supports inserting content in markdown. This is often used in ReadMe files. See [Markdown syntax guide](#) for some examples of markdown syntax.

**To insert markdown in the editor:**

1. Choose Insert > Markup
2. Select Markdown
3. Type or paste your text - the preview will show you how it will appear on your page
4. Choose Insert.

As with wiki markup, Confluence will convert your markdown to the rich text editor format. You will not be able to edit your content using markdown.

**Headings**

To format a line as a heading, type "hn." at the start of your line, where n can be a number from 1 to 6.

<table>
<thead>
<tr>
<th>What you need to type</th>
<th>What you'll get</th>
</tr>
</thead>
<tbody>
<tr>
<td>h1. Biggest heading</td>
<td>Biggest heading</td>
</tr>
<tr>
<td>h3. Big heading</td>
<td>Big heading</td>
</tr>
<tr>
<td>h5. Small heading</td>
<td>Small heading</td>
</tr>
</tbody>
</table>
Lists

Wiki markup allows you to create bulleted or numbered lists, and is flexible enough to allow a combination of the two list types.

If you need to separate the text within lists using line breaks, make sure you do so using a double slash (/\). Empty lines may disrupt the list.

Simple lists

Use the hyphen (-) to create simple lists with square bullets. Make sure there's a space between the hyphen and your text.

<table>
<thead>
<tr>
<th>What you need to type</th>
<th>What you'll get</th>
</tr>
</thead>
<tbody>
<tr>
<td>- some</td>
<td>• some</td>
</tr>
<tr>
<td>- bullet</td>
<td>• bullet</td>
</tr>
<tr>
<td>- points</td>
<td>• points</td>
</tr>
</tbody>
</table>

Bulleted lists

Use the asterisk (*) to create bullets. For each subsequent level, add an extra asterisk. Make sure there is a space between the asterisk and your text.

<table>
<thead>
<tr>
<th>What you need to type</th>
<th>What you'll get</th>
</tr>
</thead>
<tbody>
<tr>
<td>* some</td>
<td>• some</td>
</tr>
<tr>
<td>* bullet</td>
<td>• bullet</td>
</tr>
<tr>
<td>** indented</td>
<td>• indented</td>
</tr>
<tr>
<td>** bullets</td>
<td>• bullets</td>
</tr>
<tr>
<td>* points</td>
<td>• points</td>
</tr>
</tbody>
</table>

Numbered lists

Use the hash (#) to create numbered lists. Make sure there is a space between the hash and your text.

<table>
<thead>
<tr>
<th>What you need to type</th>
<th>What you'll get</th>
</tr>
</thead>
<tbody>
<tr>
<td># a</td>
<td>1. a</td>
</tr>
<tr>
<td># numbered</td>
<td>2. numbered</td>
</tr>
<tr>
<td># list</td>
<td>3. list</td>
</tr>
</tbody>
</table>

A second level of hashes will produce a sub-list, such as the alphabetical sub-list shown below.

<table>
<thead>
<tr>
<th>What you need to type</th>
<th>What you'll get</th>
</tr>
</thead>
</table>

Created in 2019 by Atlassian. Licensed under a [Creative Commons Attribution 2.5 Australia License](https://creativecommons.org/licenses/by/2.5/au/).
# Here's a sentence.
## This is a sub-list point.
### Another point at the third level.
## And a second sub-list point.
# Here's another sentence.

You can use a third level of hashes to produce a sub-sub-list.

<table>
<thead>
<tr>
<th>What you need to type</th>
<th>What you'll get</th>
</tr>
</thead>
<tbody>
<tr>
<td># Here's a sentence.</td>
<td>1. Here's a sentence.</td>
</tr>
<tr>
<td>## This is a sub-list point.</td>
<td>a. This is a sub-list point.</td>
</tr>
<tr>
<td>### Third list level.</td>
<td>i. Third list level.</td>
</tr>
<tr>
<td>### Another point at the third level.</td>
<td>ii. Another point at the third level.</td>
</tr>
<tr>
<td>## And a second sub-list point.</td>
<td>b. And a second sub-list point.</td>
</tr>
<tr>
<td># Here's another sentence.</td>
<td>2. Here's another sentence.</td>
</tr>
</tbody>
</table>

**Note:** In numbered lists as described above, the format of the 'number' displayed at each list level may be different, depending upon your browser and the style sheets installed on your Confluence instance. So in some cases, you may see letters (A, B, C, etc; or a, b, c, etc) or Roman numerals (i, ii, iii, etc) at different list levels.

### Mixed lists

<table>
<thead>
<tr>
<th>What you need to type</th>
<th>What you'll get</th>
</tr>
</thead>
<tbody>
<tr>
<td># Here</td>
<td>1. Here</td>
</tr>
<tr>
<td>* is</td>
<td>• is</td>
</tr>
<tr>
<td>* an</td>
<td>• an</td>
</tr>
<tr>
<td># example</td>
<td>• of</td>
</tr>
<tr>
<td>* of</td>
<td>• a</td>
</tr>
<tr>
<td># a</td>
<td>2. example</td>
</tr>
<tr>
<td># mixed</td>
<td>• mixed</td>
</tr>
<tr>
<td># list</td>
<td>• list</td>
</tr>
</tbody>
</table>

**Tables**

You can create two types of tables.

**Table Type 1**

Allows you to create a simple table with an optional header row. Once you’ve added this type of table, you can set the width of the columns using the [table controls in the toolbar](https://confluence.atlassian.com/display/DOC/Manually+resizable+tables).

Use double bars for a table heading row.

**What you need to type:**

---

*Created in 2019 by Atlassian. Licensed under a [Creative Commons Attribution 2.5 Australia License](https://creativecommons.org/licenses/by/2.5/au/).*
<table>
<thead>
<tr>
<th>heading 1</th>
<th>heading 2</th>
<th>heading 3</th>
</tr>
</thead>
<tbody>
<tr>
<td>cell A1</td>
<td>cell A2</td>
<td>cell A3</td>
</tr>
<tr>
<td>cell B1</td>
<td>cell B2</td>
<td>cell B3</td>
</tr>
</tbody>
</table>

You can also use a vertical header.

**What you need to type:**

<table>
<thead>
<tr>
<th>heading 1</th>
<th>col A1</th>
<th>col A2</th>
<th>col A3</th>
</tr>
</thead>
<tbody>
<tr>
<td>heading 2</td>
<td>col B1</td>
<td>col B2</td>
<td>col B3</td>
</tr>
</tbody>
</table>

**What you'll get:**

<table>
<thead>
<tr>
<th>heading 1</th>
<th>col A1</th>
<th>col A2</th>
<th>col A3</th>
</tr>
</thead>
<tbody>
<tr>
<td>heading 2</td>
<td>col B1</td>
<td>col B2</td>
<td>col B3</td>
</tr>
</tbody>
</table>

**Table Type 2**

This method uses section and column macros to create the table, and allows you to specify the width of the columns in the markup.

**What you need to type**

```
{section:border=true}
{column:width=30%}
Text for this column goes here. This is the smaller column with a
width of only 30%.
{column}
{column:width=70%}
Text for this column goes here. This is the larger column with a
width of 70%.
{column}
{section}
```

**What you'll get**

Text for this column goes here. This is the smaller column with a
width of only 30%.

Text for this column goes here. This is the larger column with a width of 70%.

ℹ️ For more details please see the Column Macro and the Section Macro.

Advanced Formatting

Color and Other Formatting
To add color and other formatting to your tables, you can use the Panel Macro within columns. More table-formatting options may be available if your Confluence administrator has installed additional macros.

Lists

Here’s an example of how to embed lists in a table:

### What you need to type

<table>
<thead>
<tr>
<th>Heading 1</th>
<th>Heading 2</th>
</tr>
</thead>
<tbody>
<tr>
<td>* Item 1</td>
<td>1. Item 1</td>
</tr>
<tr>
<td>* Item 2</td>
<td>2. Item 2</td>
</tr>
<tr>
<td>* Item 3</td>
<td>3. Item 3</td>
</tr>
</tbody>
</table>

### What you’ll get

<table>
<thead>
<tr>
<th>Heading 1</th>
<th>Heading 2</th>
</tr>
</thead>
<tbody>
<tr>
<td>Item 1</td>
<td>1. Item 1</td>
</tr>
<tr>
<td>Item 2</td>
<td>2. Item 2</td>
</tr>
<tr>
<td>Item 3</td>
<td>3. Item 3</td>
</tr>
</tbody>
</table>

**Text Effects**

Use the markup shown in the examples below to format text.

<table>
<thead>
<tr>
<th>What you need to type</th>
<th>What you’ll get</th>
</tr>
</thead>
<tbody>
<tr>
<td><em>strong</em></td>
<td>strong</td>
</tr>
<tr>
<td><em>bold text</em></td>
<td>bold text</td>
</tr>
<tr>
<td><em>emphasis</em></td>
<td>emphasis</td>
</tr>
<tr>
<td><em>italics</em></td>
<td>italics</td>
</tr>
<tr>
<td></td>
<td><em>Hint: To italicize parts of a word, add braces (curly brackets) around the underscore. For example, Thing{<em><strong>}x</strong></em> gives you this: Thing x</em></td>
</tr>
<tr>
<td>??citation??</td>
<td>—citation</td>
</tr>
<tr>
<td>-deleted-</td>
<td>deleted</td>
</tr>
<tr>
<td>+inserted+</td>
<td>inserted</td>
</tr>
</tbody>
</table>
Text with superscript

Hint: There are two ways to make superscripts work, when used directly after another word or character:

- Add a space before the superscript. For example, kg/m \(^3^\) gives you this: kg/m\(^3\)
- Add braces (curly brackets) around the superscript markup. For example, kg/m\(^3\)}
gives you this: kg/m\(^3\)

Text with subscript

{{monospaced}}

bq. Here's how you make a paragraph appear as a block quotation.

<table>
<thead>
<tr>
<th>color:red</th>
<th>look ma, red text!(color)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>look ma, red text!</td>
</tr>
</tbody>
</table>

Text Breaks

Paragraph Break

In wiki markup, a paragraph is a continuous line of text ending in two carriage returns. This is equivalent to a continuous line of text followed by a blank line.

When rendered into HTML, the result is a line of text wrapped in a set of <p></p> tags.

Line Break

Confluence provides two options for forcing a line break within a paragraph of text:

- Implicitly, by entering a single carriage return at its end.
- Explicitly, by entering two consecutive backslashes: \\ 

When rendered into HTML, the result is a paragraph of text that is split into separate lines by <br> tags, wherever a forced line break appears.

For most purposes, explicit line breaks are not required because a single carriage return is enough.

The examples below show how to use explicit line breaks.

<table>
<thead>
<tr>
<th>What you need to type</th>
<th>What you'll get</th>
</tr>
</thead>
<tbody>
<tr>
<td>here is some text</td>
<td>here is some text divided using line breaks</td>
</tr>
</tbody>
</table>
This is a short list:
* Point 1
Text to go with point 1
* Point 2
\ \ \ \nText to go with point 2 with a break

This is a short list:
- Point 1
  Text to go with point 1
- Point 2
  Text to go with point 2 with a break

If you wish to use multiple consecutive line breaks, each should be separated by a space character. For example, use this for two consecutive line breaks:
\ \ 

Horizontal Rule

To create a horizontal line across the width of your page or content block, type four dashes (like this: ----) at the beginning of a line, then press Enter or space.

Make sure that the dashes are on a separate line from the rest of the text.

<table>
<thead>
<tr>
<th>What you need to type</th>
<th>What you’ll get</th>
</tr>
</thead>
<tbody>
<tr>
<td>here is some text</td>
<td>here is some text</td>
</tr>
<tr>
<td>----</td>
<td>divided by a horizontal rule</td>
</tr>
<tr>
<td>divided by a horizontal rule</td>
<td></td>
</tr>
</tbody>
</table>

Links

You can use wiki markup to add hyperlinks to your text.

<table>
<thead>
<tr>
<th>What you need to type</th>
<th>What you’ll get</th>
</tr>
</thead>
<tbody>
<tr>

<tr>
<td>[<a href="mailto:legendaryservice@atlassian.com">mailto:legendaryservice@atlassian.com</a>]</td>
<td>A link to an email address.</td>
</tr>
<tr>
<td>[file://z:/file/on/network/share.txt]</td>
<td>A link to a file on your computer or on a network share that you have mapped to a drive. <em>This only works on Internet Explorer.</em></td>
</tr>
<tr>
<td>![<a href="http://external/image.png">http://external/image.png</a>][<a href="http://external/link.html">http://external/link.html</a>]</td>
<td>Displays an external image and links to an external URL.</td>
</tr>
</tbody>
</table>

Note that Confluence treats headings as anchors, so you can link to headings using this pattern: [spacekey:pagename#headingname], where headingname is case-sensitive and must be entered without spaces.

For each of these link forms:

- You can prepend a link alias, so that alternate text is displayed on the page. Example: [link alias|pagetitle#anchor]
- You can append a link tip, which appears as a tooltip. Example: [pagetitle#anchor|link tip]

Images

You can display images from attached files or remote sources.

<table>
<thead>
<tr>
<th>What you need to type</th>
<th>What you’ll get</th>
</tr>
</thead>
<tbody>
<tr>
<td>![<a href="http://www.host.com/image.gif">http://www.host.com/image.gif</a>]</td>
<td>An image from a remote source is displayed on the page. Uses a fully qualified URL.</td>
</tr>
<tr>
<td>!attached-image.gif!</td>
<td>An image file attached to the page is displayed.</td>
</tr>
<tr>
<td>!pageTitle^image.gif!</td>
<td>An image file attached to a different page is displayed.</td>
</tr>
<tr>
<td>![spaceKey:pageTitle^image.gif!</td>
<td>An image file attached to a page in a different space is displayed.</td>
</tr>
<tr>
<td>![2010/05/23/My Blog Post^image.gif!</td>
<td>An image file attached to a blog post is displayed.</td>
</tr>
<tr>
<td>![image.jpg</td>
<td>thumbnail!</td>
</tr>
<tr>
<td>![image.gif</td>
<td>align=right, vspace=4!</td>
</tr>
</tbody>
</table>

Available HTML image tags include:

<table>
<thead>
<tr>
<th>Image tag</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>align</td>
<td>Available values are 'left', 'right', 'bottom', 'center', 'top'.</td>
</tr>
<tr>
<td>border</td>
<td>Specifies the width of the border (in pixels).</td>
</tr>
</tbody>
</table>
bordercolor | Use with the ‘border’ tag. Specify colors by name or hex value.
--- | ---
hspace | Specifies the amount of whitespace to be inserted to the left and right of the image (in pixels).
vspace | Specifies the amount of whitespace to be inserted above and below the image (in pixels).
width | Specifies the width of the image (in pixels). This will override the natural width of the image.
height | Specifies the height of the image (in pixels). This will override the natural height of the image.
title | Specifies alternate text for the image, which is displayed when the pointer hovers over the image.
alt | Specifies alternate text for the image. This text is retrievable via search, and contributes to accessibility of the page for text-only viewing.

Page Layouts
There is no wiki markup representation for page layouts.

Macros
Storage format and wiki markup examples have been included in the documentation for each macro.

Files
Share your team’s PDFs, Office documents, images, and more in one place by uploading your files to Confluence. Automatic versioning, instant previews, permissions, and full-text search, means shared network drives can be a thing of the past for your team.

When you upload a file it is attached to the current page or blog post. This is why files are often referred to as attachments in Confluence.

You can attach anything from project plans and design mockups to video and audio files. You and your colleagues can also collaborate by commenting on files displayed on Confluence pages.

Using Files
- Upload Files
- Display Files and Images
- Manage Files
- Share and Comment on Files
- Edit Files

Permissions
The ‘Add Attachment’ and ‘Delete Attachment’ permissions are used to control who can upload and delete attachments in a space.

Users with ‘Add Page’ or ‘Add Blog’ permissions can insert existing attachments to their pages, but not upload new attachments unless they also have the ‘Add Attachment’ permission.

There is no permission that controls downloading attachments. See our knowledge base article about disabling the download of attachments if you need to do this.

Upload Files
When you upload a file, such as an image or
document, it will be attached to the current page.

You can then choose to display the file on the page as a link, an image or embed it in the page (using a macro).

To upload a file you’ll need the ‘Add Attachments’ space permission.

Upload a file

There are many ways to attach a file to a page.

In the editor you can:

- Drag the file directly onto the page.
- Go to Insert > Files and images and upload a file.

When viewing a page you can:

- Drag the file directly onto the page.
- Go to *** > Attachments and upload a file.

You can attach multiple files at a time.

Accepted file types and size

Confluence allows you to attach most file types, but you cannot attach a folder of files (including folders created by applications like Keynote - you’ll need to export your presentation to zip or other format).

Although just about any file type can be attached to a page, not all file types can be displayed on or embedded in a page. See Display Files and Images to find out more. The maximum file size you can upload to Confluence is set by your system administrator. By default it is 10mb, but your administrator may have increased or reduced this limit.

File versions

If you upload a file with the same name as an existing attachment on the same page, Confluence will overwrite the existing attachment. Version history is kept for all attachments. See Manage Files to find out more.

Any changes you make to the source file will not affect the copy that was uploaded to Confluence. To update the Confluence copy, you need to upload the new version of the file.

What happens after a file is uploaded?

Text extraction and indexing

When a file is uploaded, its text is extracted and indexed. This allows people to search for the content of a file, not just the filename.

See Configuring Attachment Size for more information on how files are indexed.

Thumbnail generation

When you insert an uploaded file into a page (for example a Word document, or Excel spreadsheet), Confluence will generate thumbnail images of the file contents, so it can be viewed inline in the page, or in the preview. In Confluence Server, thumbnail generation is handled by Confluence.
In Confluence Data Center it's externalised, and happens in sandboxes, to minimise the impact on individual Confluence nodes. This is because the thumbnail generation process can be quite memory and CPU intensive, especially for very complex files. See Document conversion for Confluence Data Center to find out more.

Notes

⚠️ We recommend you don't use special characters in page or attachment names, as the page or attachment may not be found by Confluence search, and may cause some Confluence functions to behave unexpectedly.

Display Files and Images

Files can be displayed on a page as a thumbnail or as a link. There are a few different ways to Upload Files.

You can control how the file appears on your page. The options available depend on the type of file.

Insert a file into your page

There's a few ways to insert a file into your page:

- Go to Insert > Files on the editor toolbar and select any of the previously uploaded files, or
- Drag the file directly into the editor (this will upload and insert the file in one step), or
- Type ! and choose an attached file from the autocomplete drop down.

Your file will appear on your page as a thumbnail. Click the thumbnail to resize it or to switch to showing the file as a link.

Insert a file attached to another page

On this page:
- Insert a file into your page
  - Insert a file attached to another page
  - Insert an image file from the web
  - Delete files from your page
- Preview a file
- Office and PDF files
- Image files
- Multimedia files
- Show a list of files on a page

Related pages:
- Links
- Manage Files
- Edit Files
You can display a file that's attached to a different page of the same Confluence site, if you know the name of the file.

**To display an image attached to a different page:**
1. Go to **Insert > Files** and choose the **Search on other pages**.
2. Enter the name of the file.
3. Choose whether to search the current space or **All Spaces** and choose **Search**.
4. Select the file from the search results and choose **Insert**.

**Insert an image file from the web**

You can display an image from a remote web page on your Confluence page, without needing to attach it to your page. You need to know the URL for the image, not for the web page it appears on. This is only available for image files, not other types of files (like documents).

**To display an image from a web page:**
1. While editing the page, position the cursor where you want to place the image.
2. Choose **Insert > Files** and choose **Images from the web**.
4. Choose **Preview** to check that the URL and image are correct.
5. Choose **Insert**.

**Delete files from your page**

If you delete a file or image in the editor, the attached file will not be deleted. Go to *** > Attachments to delete the attachment completely from the page.

Seeing an 'unknown attachment' placeholder on your page? This means that the attached file has been deleted from the page (or another page).

**Preview a file**

Click an image, file thumbnail or link when viewing a page to launch the preview.

The preview includes images from the web that are displayed on the page and files that are attached to the page (even if they are not currently displayed on the page).

In the preview you can:
- Download the image file.
- Upload a new version of the file (attached files only).
- Comment on the file.
- Choose to edit the file with a desktop application.
- Zoom in, out or fit the image to the width of your browser.
- Browse like a slideshow using the next and back buttons.
- See other files attached to the page and select a thumbnail to preview that file.
- Switch to a full screen presentation mode.

Many file types can be previewed, including Office files, PDFs and many image types.

Which files can be previewed?

| Images files | Office files | Other files |
Office and PDF files

Inserting a file in a page is a great way to make useful documents, spreadsheets, presentations and other files available to your team.

As with all file types, you can choose to insert the file as a link, or as a thumbnail. The thumbnail shows a preview of the document's contents, and can be resized.

To view an Office or PDF file, click the link or thumbnail to see the full preview (no need to have Excel, Word or PowerPoint installed). Alternatively, use the Download button in the preview to download the file and view offline.

You can even edit and comment on Office and PDF files.

Image files

When editing the page, select an image to show the image properties panel. The panel allows you to set the display size, add a border and effects and link the image to other pages.
From the image properties panel you can:

- Choose a **preset size** for the image
- Enter a **width** for the image (between 16px and 900px)
- Add a **border** around the image
- **Link** the image to a page or URL
- **Align** the image (you can use the left and right align buttons to make the text wrap around the image too)
- Add a title, which is shown when you hover over the image (go to Properties > Title)
- Add alt text, which is used by screen readers and when the image can't be shown (go to Properties > Title)
- Add **effects** to the image such as drop shadow or snapshot (go to Properties > Effects).

**To add a caption to an image using the Instant Camera effect:**

- Choose **Effects** in the image properties panel and choose the **Instant Camera** image effect.
- Save the page.
- Go to *** > **Attachments** to go to the 'Attachments' view of the page.
- Choose **Properties** next to the image file.
- Add a comment to the attachment. The text in your comment will appear as the image caption.

You will need to re-enter the comment each time you upload a new version of the image.

**Note:** The Instant Camera effect only works with Latin character languages, due to a lack of handwriting style fonts in multi-byte languages.

**Note about image effects**

Displaying image effects can be resource intensive. Confluence limits the threads that are dedicated to displaying image effects so that it does not impact your whole instance. If a thread is not available, Confluence will display the image without the effect.

The following knowledge base article provides information if you need to adjust the number of threads - **Image effects are not displayed in Confluence 5.5 or later.**

**Multimedia files**

The file preview also supports MP3 audio and MP4 video files. It uses HTML5 to play attached audio and video files. This means the file types people can play in the preview depends on the audio and video formats their browser supports.

You can also display a wider range of multimedia files (video, audio and animation) using the **Multimedia Macro**.

Display online video (such as YouTube or Vimeo videos) using the **Widget Connector Macro**.

**Show a list of files on a page**

There are several ways you can display a list of files on a page. You can:
- Use the Attachments Macro to show files attached to the current page.
- Use the Space Attachments Macro to show all files in a space.
- Use the Gallery Macro to show thumbnails of images attached to a page.

You can also use the File List blueprint for uploading, viewing and managing lists of files.

### Manage Files

Files are attached to Confluence pages. See Upload Files to find out about attaching files to pages.

Once attached you can download, delete and edit these files, for example if you need to upload a new version of the file, or change the page it is attached to.

#### Download attached files

Any user with permission to view a page can also download any files attached to that page.

To download an individual file:

- Click the Download button in the file preview, or
- Go to
  - > Attachments
- and then right click on the file name and save the link.

To download all files attached to a page as a zip file:

1. Go to
  - > Attachments
2. Click Download All.

There's no option to download all attachments in a space.

#### Delete an attached file

You'll need the 'Delete Attachment' space permission to delete an attached file.

To delete all versions of an attached file:

1. Go to the page that contains the attachment.
2. Go to
  - > Attachments
3. Choose Delete next to the attachment you want to delete.
4. Choose Delete to confirm your action.

Deleted files can be restored from the trash. You'll need to be a space admin to do this.

Space Admins can also delete a specific versions of an attachment:

1. Go to
  - > Attachments
2. Click the expand arrow next to the attachment name to see the list of attachment versions
3. Choose Delete next to the version you want to delete.

Deleted file versions are not recoverable from the trash.
**Screenshot: Attachments and attachment versions**

#### Upload a new version of an attached file

There are two ways up upload a new version of an attached file. You can:

- Upload a file with the same file name to the page.
- Use the **Upload a new version** button in the file preview to upload a file with a different name (for images and PDFs only).

To view attachment versions:

- Go to
  - > Attachments
- Click the expand arrow next to the attachment name.

All earlier versions of the file will appear.

You can't revert to an earlier version of the file, but you can choose to remove earlier versions if you have Space Administrator permissions.

#### Move a file to another page

You'll need the 'Add Page', 'Add Attachment' and 'Remove Attachment' space permissions to move an attached file to another page.

To change the page that a file is attached to:

- Go to
  - > Attachments
- Choose **Properties** next to the attachment you want to move.
- Enter the name of the page you want to move the attachment to (for example My Destination Page).
- Choose **Save**.

If you want to move the file to a page in another space, add the space key before the page name (for example DOC:My Destination Page).

#### Edit properties of an attached file

You'll need the 'Add Attachment' permission in the space to edit the file properties.

To edit the properties of an attached file:

- Go to
  - > Attachments
- Click **Properties** beside the attachment you want to edit.

You can:
• change the file name
• add a comment (used in the version list and also by the Snapshot image effect)
• change the MIME type
• move the attachment to another page
• add a label.

Changing the MIME type may cause your file to display incorrectly.

View all attached files in a space

There are two ways you can view all files in a space. You can:

• Use the **Space Attachments macro** to display the list of files on a page.
• Go to the space and choose **Space tools > Content Tools** from the bottom of the sidebar Then choose **Attachments**.

You can use the filters to only show files with a particular label or file extension.

**Screenshot: Space attachments macro**

**Share and Comment on Files**

Collaboration doesn’t just happen on pages; often you’ll need to collaborate with your team on documents, presentations, images and spreadsheets. Whether it’s mockups for a new marketing campaign or a full project plan, you can simplify your team’s feedback loop by working together on files in Confluence.

**Share a file**

Do you have lots of files on a page and want to get a team member's input on just one of them? You can share the file with them directly.

It works just like sharing a page:

1. Click the thumbnail or link to preview the file.
2. Choose the **Share** button.
3. Enter an email address, user name or group name, add your message and send.

Your team members will get an email with your message and a link to view the file.

**On this page:**

- Share a file
- Comment on a file

**Related pages:**

- Files
- Edit Files
- Display Files and Images
- Comment on pages and blog posts

**Share notifications are only sent by email, they won't appear in the workbox**
Comment on a file

Whether it's an image – like a mockup of the new marketing campaign that needs feedback – a PDF, a presentation, or any other file you can preview in Confluence, you can drop a pin anywhere on the preview and add your comment to start a conversation.

To comment on a file:

1. Click the thumbnail or link to preview the file.
2. Drag the pin icon from the bottom of the preview and drop it where you want to comment.
3. Add your comment and Save.

Pinned comments work just like inline comments on pages. You can use @mentions and links, and drop as many pins as you need on any part of the file. You can even add simple macros such as the code macro using wiki markup autocomplete. Anyone with permission to add comments to the page can add and reply to comments on a file.

When you preview a file, you'll see pins for any existing comments on that version of the file. Select a pin to view the comment.

Once the conversation is finished, you can resolve the comment to hide it (and any replies) from view. If you need to see resolved comments again, you can reopen them. Go to

> Resolved comments

in the preview.

You can't comment on files that are hosted on a web server and added to Confluence using their URL, or on files that can't be viewed in the preview (such as videos, zip files, and some other file types).

What happens to comments when you upload a new version?

Comments are specific to the version of the file. This is to avoid confusion when the part of the document or image the comment is pinned to has changed significantly.
To see inline comments on a previous version of the file:

1. Click the thumbnail or link to preview the file.
2. Click the filename dropdown in the top left and select a previous version.
3. Comment pins will now be visible, for all comments made on that version.

How many comments can you add to one file?

While there is no limit to the number of comments that can be added to a file, Confluence can only display 100 comments. See CONFSERVER-43397 for more information.

Edit Files

You can edit any file attached to a Confluence page using your preferred desktop application, then save the file back to Confluence automatically. You can edit Office documents, Photoshop files, Keynote presentations — any attached file with a compatible application installed on your computer.

To edit a file you'll need the 'Add Attachments' space permission.

This feature is available in Confluence 6.11 or later. Using an earlier version? You can still edit Microsoft Office documents or upload your files manually. See our guide to managing files.

Edit an attached file

To edit files, you'll need to install the Atlassian Companion app and allow it to connect to your Confluence site. Once the Companion app is installed and running, you can start editing.

To edit a file in Confluence:

1. Go to the page containing the attached file.
2. Click the file to open it in preview.
3. Click **Edit with**.
4. Select the application in which you want to edit your file.
5. Make your changes and then save your file in the desktop application.
6. In Confluence, click **Upload** to confirm you want to save the edited file as a new version.

Screenshot: 'Edit with' option in file preview
1. Other ways to edit files
   
   You can also edit a file from the attachments page.

   To edit a file from the attachments page:
   
   1. Go to the page that contains the attached file.
   2. Go to
      
      > Attachments
   3. Next to the file name, click Edit, then follow the instructions above to edit and save your changes.

   Install and connect the Atlassian Companion app
The Atlassian Companion app manages the download and re-upload of files you edit in Confluence.

The first time you edit a file, you'll be prompted to install the Companion app and allow it to connect to your Confluence site.

1. Click the file to open it in preview.
2. Click **Edit with**.
3. Follow the prompts to download and install the Atlassian Companion app.
4. Launch the Companion app.
5. In the Companion app, click **Trust** to confirm you want to connect to Confluence.

You can also download and install the app manually for Mac or Windows or use a Microsoft Installer (.msi file). See **Administering the Atlassian Companion app** for details.

### Change your default app

Confluence allows you to edit files in your operating system's default app for that file type (for example, .psd files will open in Photoshop). To change the app your Confluence file opens in, change the default app in your operating system.

### Manually upload an edited file

You can only upload changes back to Confluence if those changes are saved in the original file. You **won't be** able to upload if:

- you edit the file and save it as a new version
- the application you're using saves the file in a different format to the original — for example, from a PowerPoint file (.pptx) to a Keynote file (.key).

If this happens, you can upload your new version manually:

1. Click the original file in Confluence to open it in preview.
2. Click the **Upload a new version** button and select your new file version.
3. Click **Done**.

### What to do if you lose your edited file

If you close a file and can't upload it back to Confluence (for example, if you lose internet connection), you can access a backup from the Atlassian Companion folder on your computer.

Follow our guide to [accessing Confluence files edited with the Atlassian Companion app](#).

### File size limits

Confluence won't allow you to upload your changes if the edited file is larger than your site's maximum file size limit. This limit is set by your system administrator. By default the limit is 10 MB, but your admin may have increased or reduced it. Check out **Upload Files** for more information.

### Revoke trust between Confluence and the Companion app

If you want to disconnect the Companion app from your Confluence site, you can remove it as a trusted site.

To revoke trust:

1. Click the Companion app icon in your system's toolbar.
2. Choose **Clear all trusted domains**.

Note: clearing trusted domains won't kill active connections. If you select **Clear all trusted domains** while editing a file, you'll still be able to upload those changes back to Confluence.
Confluence Mobile

There are two ways to stay connected to your team's work in Confluence while you're out and about - the Confluence Server mobile app for iOS and Android, or via your device's browser.

If you're a Confluence user, check out the two ways you can use Confluence on your device.

- Using the Confluence Server mobile app
- Using Confluence via your mobile browser

If you're an administrator, read on to find out whether your team will be able to use the mobile app. Once you've met the requirements, invite your team to use the app!

Did you participate in our beta?

First of all, thank you! Your feedback was invaluable to us. To keep using the app, however, you'll need to:

- **Upgrade your site** to Confluence 6.8 or later, and
- **Update your app** to version 1.x or later:
  - For Android, head to the Play Store and hit Update.
  - For iOS, head to the App Store to download the official app.

If you update your app without upgrading Confluence, the app will still work for a while, but you won't get access to new features, like push notifications. Also, once you log out, you won't be able to log back in, as the app checks that you have the required Confluence version.

What you'll need

Confluence requirements

In order for your users to try the Confluence Server mobile app, you will need to:

- upgrade your Confluence site to **Confluence 6.8** or later
- allow users to access your site on their device (if your site isn't accessible on the public internet, people will need be connected to your network or use a **VPN**)

Device requirements

In order to use the app, your users will need a device with either:

- Android 4.4 (KitKat) or later, or
- iOS 11 or later (iPhone, iPad or iPod Touch)

Users will need to log in to use the app, even if your site allows anonymous users.

Considerations for administrators

Here are some things to consider when determining whether your users will be able to use the app.

VPN and firewalls
If your Confluence site is not accessible on the public internet, users will need to connect their device to your network or virtual private network (VPN) in order to use the app.

We recommend providing your users with step-by-step instructions on how to connect to your VPN when you let them know the mobile app is available, as this is something Atlassian Support will not be able to help them with.

The mobile app will also attempt to check the compatibility of your site prior to presenting the login screen. If you've configured a custom filter to prevent unauthenticated requests to your server, you will need to change it to allow `<confluence-base-url>/server-info.action` to pass through without authentication.

**HTTPS and certificate requirements**

In the latest version of the iOS and Android apps, you can connect to the app using either HTTP or HTTPS.

If you're using HTTPS your proxy must allow TLS 1.2 traffic. This is an iOS requirement that we've chosen to implement for both the iOS and Android apps to prevent confusion (for example where one device can log in, and another cannot).

Ideally, your certificate should be from a trusted Certificate Authority. If you have certificate that is self-signed, or from an unknown Certificate Authority (for example, you are your own CA), users may still be able to use the app by manually installing your certificate on their device. See our Knowledge base article for more information on how to do this.

**Login and authentication**

The app supports all common Confluence user management configurations, including external user directories and SAML single sign-on. Users will need to sign in to use the app, even if your site allows anonymous access.

**Mobile Device Management (MDM)**

We do not currently support any mobile device management (MDM) or app management solutions.

**Marketplace apps, themes, and visual customizations**

The mobile app provides a simple, lightweight way for users to view, create, edit and collaborate on pages. Complex interactions, including those provided by Marketplace apps, such as blueprints, calendars, workflows will not be available in the app. Some third party macros may be available, depending on whether the third-party app supports rendering these macros on mobile.

Any theming or look and feel customizations you've made to your site will not be reflected in the mobile app.

**Cloud services**

In order to provide push notifications to users’ devices, we have developed a cloud-based notification service. This service is developed and maintained by Atlassian, and is hosted on our AWS infrastructure (AWS SNS). See Push notifications service below for more information.

This is the only cloud-based service used by the app.

**Push notifications service**

The Confluence Server mobile app can push notifications directly to users’ devices. Users choose whether they'd like to receive push notifications from the app, and can opt out at any time. This feature uses a cloud-based notifications service developed and maintained by Atlassian and hosted on our AWS infrastructure. No user or message content is sent to the service, only notification IDs, and we don't store any data.

If you need to avoid using any cloud-based services you can choose to disable push notifications entirely. Head to
General Configuration > Mobile apps.

If you're using restrictive firewall or proxy server settings, you'll need to allow (whitelist) `https://mobile-server-push-notification.atlassian.com` to ensure push notifications work as expected.

For sites that are not accessible on the public internet (for example users need to be connected via VPN to use the app) we adapt the push notification message as follows:

- If the user is connected to your network or VPN, we'll show the full notification, for example "Sara Leung shared 'End of year party' with you"
- If the user is not currently connected to your network or VPN, we'll show a shorter notification, for example "1 new notification".

Mobile web and linking directly to pages

It is not possible to go directly from a link, for example in an email notification, to the app. To help with this limitation, when people land on a Confluence page in their device's browser, they'll see the Open in app button on. Tapping this prompt will open the app, if they have it installed, or take them to the App or Play store to download it.

If you don't want this button to display in mobile web, you'll need to disable the entire Confluence Mobile plugin, which is required to use the mobile app.

Limitations and known issues

Not all macros are available

Not all macros will display in the app or mobile web. If a macro can't be displayed, you'll see the message below, and have the option to tap through to the desktop version of the page, in your device's browser.

*Screenshot: Error that appears when a macro is not rendered in Confluence mobile*

Administrators can disable Confluence mobile on your site

If you're not able to use the mobile app or mobile web, it may be because your administrator has disabled one or both of the following system apps:

- **Confluence mobile plugin** (required to use the mobile app)
- **Confluence mobile web plugin** (required to use mobile web)

Disabling the 'Confluence Mobile Plugin' will also disable all the modules of the Workbox - Host Plugin plugin. This issue is being tracked at [CONFSERVER-40782](https://confluence.atlassian.com/pages/viewpage.action?pageId=123456789)
Seperate Cloud and Server mobile apps

While the functionality of the two mobile apps is very similar, you will need to download the **Confluence Server mobile app** to be able to authenticate with a server site. You can't use the **Confluence Cloud** app with a Confluence Server site or vice versa.

**Confluence Server mobile app beta**

Error rendering macro 'viewport-redirect' : null

**Using the Confluence Server mobile app**

Stay connected to your team's work with the Confluence mobile app. No matter whether you have an iPhone, iPad, Android phone, or Android tablet, we've got you covered when you're away from your desk.

If you're the first in your organisation to try the app, ask your Confluence admin to have a read through **Confluence Mobile - Considerations for administrators**, so they can make sure you're able to connect.

**Which app do I need?**

- **Confluence Server app** - If you're using Confluence 6.8 or later, download the Confluence Server app from **Play Store** or **App Store**.
- **Confluence Cloud app** - If you're using Confluence Cloud (your Confluence version number is 1000 or higher) head over to our Cloud documentation to find out about the **Confluence Cloud app for iOS and Android**.

**Confluence Server for Android**

Here's what you'll get, and what you can do in the app:

- **Create and edit pages**
  Create a quick page when you're on site with a customer, or fix that typo on an existing page before anyone notices. Create and edit lets you do the important stuff, wherever you are.

- **Notifications when you need them most**
  Get push notifications for mentions, comment replies, page shares, and tasks assigned to you, so you can act quickly when it really matters.

- **Collaborate on the go**
  Comment on pages to keep work moving, wherever you are. Like pages to show your support, and share them via email and other apps.

- **Get back to your work, fast**
  The **Recents** tab lets you quickly find pages you've viewed recently. Find those meeting notes you added yesterday, or the blog post you were reading earlier.

- **Visit any space, and browse using the page tree**
  The **Spaces** tab lets you visit your My Spaces, and any other space on your site. Pick a space and browse using the familiar Confluence page tree.
Have ideas on how to make the app even more useful? We want your feedback! Shake your phone (or head to Settings > Feedback) to drop us a note.

Limitations and known issues

- Some page macros won’t display in the app or mobile web. You’ll need to view the page in your browser (or switch to full desktop mode on your device).
- Image and file upload is not currently available in the app.
- Links to Confluence pages (from emails or other apps) don’t automatically open in the app.
- Admins can disable push notifications for your entire site.

Confluence Server for iOS

Confluence Server for iOS is a universal app for iPhone and iPad, so you can choose the best device for the job. If you’d rather not create and edit pages on your iPhone, switch over to your iPad and take advantage of the larger screen and keyboard. You can also use split view on iPad and work side by side with other apps.

Here’s what you’ll get, and what you can do in the app:

- **Create and edit pages**
  Create a quick page when you’re on site with a customer, or fix that typo on an existing page before anyone notices. Create and edit lets you do the important stuff, wherever you are.

- **Notifications when you need them most**
  Keep up with what your team is doing with push notifications for new pages and posts, comments, mentions, page shares, likes, and tasks assigned to you.

- **Get back to your work, fast**
  The Your work tab serves up pages you’ve viewed or worked on recently. Find those meeting notes you added yesterday, or the blog post you were reading earlier.

- **Visit any space, and browse using the page tree**
  The Spaces tab lets you visit your My Spaces, and any other space on your site. Pick a space and browse using the familiar Confluence page tree. While you’re in the spaces list, you can add spaces to My Spaces or remove the ones that aren’t important any more.

- **Stay connected to your team**
  The activity feed lets you see all activity on your site, or filter it by space. Like and comment on pages, or share a link to any page, right from the app.
Have ideas on how to make the app even more useful? We want your feedback! Shake your phone (or head to Settings > Feedback) to drop us a note.

Limitations and known issues

- Some page macros won't display in the app or mobile web. You'll need to view the page in your browser (or switch to full desktop mode on your device).
- Image and file upload is not currently available in the app.
- Links to Confluence pages (from emails or other apps) don't automatically open in the app.
- Admins can disable push notifications for your entire site.

Did you participate in our beta?

First of all, thank you! 💌 Your feedback was invaluable to us. To keep using the app, however, you'll need to:

- **Upgrade your site** to Confluence 6.8 or later, and
- **Update your app** to version 1.x or later:
  - For Android, head to the Play Store and hit Update.
  - For iOS, head to the App Store to download the official app.

If you update your app without upgrading Confluence, the app will still work for a while, but you won't get access to new features, like push notifications. Also, once you log out, you won't be able to log back in, as the app checks that you have the required Confluence version.

Customizing push notifications

Push notifications are a great way to stay in the loop, as they appear on your device, even when you're not using the app. Tap the notification, and be taken straight into the app.

There are three notification levels, 'All activity', 'Activity for me', and 'None'. iOS users also have an additional 'Custom' option, where they can turn off individual notifications.

To change your push notification settings:

- For Android tap
Here's a summary of common Confluence actions, and whether a push notification is sent.

<table>
<thead>
<tr>
<th>Action</th>
<th>Push notification setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>Someone mentions you</td>
<td>All activity</td>
</tr>
<tr>
<td>Someone shares a page / blog post with you</td>
<td>Activity for me</td>
</tr>
<tr>
<td>Someone assigns a task to you</td>
<td>None</td>
</tr>
<tr>
<td>Someone comments on a page / blog post you're watching</td>
<td>All activity</td>
</tr>
<tr>
<td>Someone comments on a page / blog post you created</td>
<td>Activity for me</td>
</tr>
<tr>
<td>Someone replies to your comment</td>
<td>None</td>
</tr>
<tr>
<td>Someone likes a page / blog post you created</td>
<td>All activity</td>
</tr>
<tr>
<td>Someone likes your comment or your reply</td>
<td>Activity for me</td>
</tr>
<tr>
<td>Someone invites you to edit a page / blog post</td>
<td>None</td>
</tr>
<tr>
<td>Someone edits a page / blog post / comment</td>
<td>All activity</td>
</tr>
</tbody>
</table>

If you're using the iOS app, choose 'Custom' to further tailor your notifications, and turn off any of the following notifications individually:

- Shares
- Mentions
- Tasks
- Comments on pages / blog posts you created
- Likes on pages / blog posts / comments you created
- Comments on pages / blog posts you're watching.

Good to know

- If your site isn't accessible on the public internet (for example you need to be connected to your office wifi, or use a VPN to access it from home) we adapt the push notification message, so that you get a shorter version when you're not connected to your network.

- Your admin can disable push notifications for the entire site. If this is the case, you'll see a message when you go to the Push settings screen in the app.
- On iOS, when you first install the app, you'll be prompted to allow the app to send notifications to your device. We recommend you choose Allow, as you can very easily mute the notifications in the app later. If you do choose Don't allow, and change your mind, you'll need to go to Settings > Notifications > Confluence then make sure Allow notifications is enabled.
This page is about Confluence mobile web, which is accessed using the browser your your device.

For a richer experience, try the Confluence Server mobile app for iOS and Android.

When you access Confluence using the browser on a mobile device, you'll see a version of Confluence which is optimized for mobile viewing. Confluence chooses the mobile or desktop interface based on your device, but you can still switch to the desktop site on your mobile by choosing menu then choosing Switch to desktop version.

You can also swap from the desktop view to the mobile view if you’re on a mobile device, by choosing Switch to Confluence Mobile at the top of the page.

On your supported mobile device, you can:

- View the Confluence dashboard, pages, blog posts, and user profiles.
- Add or reply to a comment on a page or blog post.
- Like a page, blog post or comment.
- Watch a page or blog post.
- See your notifications and tasks.

You can't add or edit pages or blog posts, or edit existing comments, using the mobile interface.

The dashboard – the first thing you see

Choose a tab to see:

- Popular content – what people like in your wiki.
- Recent blogs – the latest blog posts.
- Network – updates by people in your network.

Tap the links to view the full content of a page, blog post or comment.
Searching for content and people

Tap the menu icon

To open the menu panel on the left of the page. Then type text or a person's name in the Search box. The mobile interface offers the quick search, which returns matches on page title only. To use advanced search, switch to desktop mode.

Viewing pages, blog posts and comments

Tap a link on the dashboard or on any other page. Confluence will display the linked page, blog post or comment.

You can:

- View the content, tap a link to move to another page, and interact with the page using the standard
functionality supported by mobile browsers.

- Like or unlike a page, blog post or comment.
- Watch or stop watching a page or blog post.
- Add or reply to a comment.

Viewing people's profiles

Search for a person's name, then view that person's user profile. Tap the options to phone, SMS or email a colleague directly from your mobile device.

Following up on notifications

You can view and respond to your notifications on your phone or other mobile device. Tap the menu icon to open the menu panel on the left of the page. Choose Notifications, and tap a notification to see its details. You can reply, watch or like via the inline actions. Tap Open to open the page or blog post in a new page. For full details, see Workbox Notifications.

Viewing tasks

You can view and manage your tasks on your phone or other mobile device too. Tap the menu icon to open the menu panel on the left of the page. Choose Tasks then tap a task to see its details.
Invite your team to use the app

If you're running Confluence 6.8 or later, invite your team to start using the Confluence Server mobile app.

Head to Confluence Mobile to read up on some considerations for administrators, and find out whether you can use the app with your site.

Users don't need any additional permissions to use the app, you just need to let them know where to download it and how to log in. If your Confluence site is not accessible on the public internet, you may also need to help them connect to your network or VPN on their device.

Email template

Here's a suggested email template that you can adapt to let your users know that the Confluence Server mobile app is available. Don't forget to test that you can connect to your site before sending!

Hi everyone,

Confluence mobile apps are now available for Android and iOS, and you can use them with our Confluence instance. With the mobile apps, you can create, edit and read pages, straight from your device.

To use the app, you'll need a device with either Android 4.4 (KitKat) or later, or iOS 11 or later (iPhone, iPad or iPod Touch).

Download the app for:

To log in you'll need our Confluence URL: <add your full URL, e.g. https://yoursite.customer.com/confluence>

<If your site isn't accessible outside your network>
To use the app you'll need to be connected to our network / VPN. <Add steps for connecting to VPN, if applicable>

<If your certificate is self-signed or from an unknown Certificate Authority>
You'll also need to install our certificate on your device. <Add steps for downloading the certificate>
Macros

Using macros helps you to expand the capabilities of your Confluence pages, allowing you to add extra functionality or include dynamic content. For example, use the Attachments macro to list files attached to a page, or use the Widget Connector macro to include things like a YouTube video or Twitter feed.

Add a Macro to your Page

Including Macros with the Macro Browser

To add a macro to a page:

1. From the editor toolbar, choose Insert
   > Other Macros
2. Find and select the required macro

Speed it up with autocomplete: Type { and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.

To edit an existing macro: Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.

Macro Parameters

Many macros have optional parameters you can use to control the macro's output.

With the Attachments Macro, for instance, you have two optional parameters allowing you to:

- Specify the file formats of the attachments displayed
- Choose whether or not you want old versions of the attachments displayed

Macro Placeholders

Macro placeholders are displayed in the editor where you have added a macro to the page.

When editing a page, you can:

- Double-click a macro placeholder (or click the placeholder and choose Edit) to open the macro dialog window and edit the macro's parameters
- Select a macro placeholder to cut, copy and paste the macro

Confluence macros

Below is a list of the macros currently bundled with Confluence. Click a macro name for details of the usage,
including optional parameters and examples.

- Activity Stream Macro
- Anchor Macro
- Attachments Macro
- Blog Posts Macro
- Change-History Macro
- Chart Macro
- Cheese Macro
- Children Display Macro
- Code Block Macro
- Column Macro
- Content by Label Macro
- Content by User Macro
- Content Report Table Macro
- Contributors Macro
- Contributors Summary Macro
- Create from Template Macro
- Create Space Button Macro
- Excerpt Include Macro
- Excerpt Macro
- Expand Macro
- Favorite Pages Macro
- Gadget Macro
- Gallery Macro
- Global Reports Macro
- HTML Include Macro
- HTML Macro
- IM Presence Macro
- Include Page Macro
- Info, Tip, Note, and Warning Macros
- Jira Chart Macro
- Jira Issues Macro
- JUnit Report Macro
- Labels List Macro
- Livesearch Macro
- Loremipsum Macro
- Multimedia Macro
- Navigation Map Macro
- Network Macro
- Noformat Macro
- Office Excel Macro
- Office PowerPoint Macro
- Office Word Macro
- Page Index Macro
- Page Properties Macro
- Page Properties Report Macro
- Page Tree Macro
- Page Tree Search Macro
- Panel Macro
- PDF Macro
- Popular Labels Macro
- Profile Picture Macro
- Recently Updated Dashboard Macro
- Recently Updated Macro
- Recently Used Labels Macro
- Related Labels Macro
- Roadmap Planner Macro
- RSS Feed Macro
- Search Results Macro
- Section Macro
- Space Attachments Macro
- Space Details Macro
Creating your own macros

Users with System Administrator permissions can create user macros - see Writing User Macros.

If you want to create something more complex, you can develop your own plugin - see Writing Confluence Plugins.

Getting more macros from The Marketplace

You can find a wide range of Atlassian and third party macros at The Marketplace. These are distributed as apps and can be installed by a Confluence Administrator.

Macro usage statistics

Confluence administrators can check how often each macro is used in your site.

To see how often a macro is used, go to

> General Configuration > Macro Usage. This lists how often each macro is used in current spaces but doesn't include any macros used on pages in archived spaces or macros provided by disabled apps.

Do more with Confluence

Extend Confluence with one of the hundreds of other macros in the Atlassian Marketplace, such as:

- Composition Tabs & Page Layouts: Toggle or expand the visible of portions of your pages with the Toggle and Cloak macro
- Content Formatting for Confluence: Over 30 easy-to-use Confluence macros gives you the ability to create better, more engaging content

Activity Stream Macro

The Activity Stream macro is a specific instance of the Gadget macro. It inserts an Activity Stream gadget onto your page. For instructions, see Activity Stream Gadget.

Related pages:

- Activity Stream Gadget
- Gadget Macro

Anchor Macro

Allows you to link to a specific part of a page. For more information on using anchors see Anchors.

Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.
Macro name: anchor
Macro body: None.

{anchor:here}

Attachments Macro

The Attachments macro displays a list of files attached to a page.

It also allows users (with appropriate permissions) to:

- upload a file to the page, directly from the list
- edit attachment properties and labels
- delete an attached file (this deletes all versions of the file)
- preview image attachments
- download all files attached to the page.

Note: you can use the macro parameters to turn off previews if you have very large attachments.

Screenshot: the Attachments macro, showing details of an attachment

Using the Attachments Macro

To add the Attachments macro to a page:

1. From the editor toolbar, choose Insert > Other Macros

2. Find and select the required macro

Speed it up with autocomplete: Type { and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.

To edit an existing macro: Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.
### Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
</table>
| **Filename Patterns**<br>(patterns) | all     | A comma-separated list of regular expressions, used to filter the attachments by file name. Note that the parameter values must be regular expressions. For example:  
- To match a file suffix of 'jpg', use `.jpg` (not `*.jpg`).  
- To match file names ending in 'jpg' or 'png', use `.*jpg.*png` |
| **Attachment Labels**<br>(labels)  | (none)  | A list of labels, used to filter the attachments to display. If you wish to enter more than one label, separate the labels with commas. Confluence will show only attachments that have all the labels specified. (The match is an AND, not an OR.) For information on labeling the attachments, see Add, Remove and Search for Labels. |
| **Include Old Attachment Versions**<br>(old) | false  | A value of true will include previous attachment versions in the list. |
| **Sort By**<br>(sortBy)          | date    | The sort order for attachments. Note that people viewing the page can change the sort order by clicking the column headings. Valid values are:  
- date – sorts by updated date in reverse chronological order (newest first)  
- size – sorts largest to smallest  
- name – sorts alphabetically  
- created date – sorts by creation date in reverse chronological order (newest first) |
| **Sort Order**<br>(sortOrder)    | ascending | Used in combination with the Sort By parameter, to sort the attachments in ascending or descending order. |
## Attachments Macro

<table>
<thead>
<tr>
<th>Allow Upload (upload)</th>
<th>true</th>
<th>If selected, the list of attachments will include options allowing users to browse for, and attach, new files.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Page Title (page)</td>
<td>(none)</td>
<td>Used to display attachments from another page. If you do not enter a page title, the macro will display the files attached to the current page.</td>
</tr>
<tr>
<td>Show Previews (preview)</td>
<td>true</td>
<td>Used to display a preview of the attached file. If true, preview will be visible when the list item is expanded.</td>
</tr>
</tbody>
</table>

**Wiki markup example**

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** attachments

**Macro body:** None.

```
{attachments:old=false|patterns=.*png,.*jpg|sortby=name|page=My page about chocolate|sortorder=descending|labels=chocolate,cookies|upload=false|preview=false}
```

## Edit an attachment

There are a few ways to edit attachments in Confluence.

To edit a file from the attachments macro list:

1. Click the arrow next to the file name to view its version history.
2. Click Edit.
3. Select the application in which you want to edit your file.
4. Make your changes and then save your file in the desktop application.
5. In Confluence, click Upload to confirm you want to save the edited file as a new version.

Learn more about editing files in Confluence.

**Blog Posts Macro**

The Blog Posts macro allows you to display blog posts on a Confluence page. Clicking on a title takes you to the blog post.

**Using the Blog Posts Macro**

**To add the Blog Posts macro to a page:**

1. From the editor toolbar, choose **Insert**
   
   + ▼
   
   > Other Macros
   
2. Find and select the required macro

**Speed it up with autocomplete:** Type `{ and the beginning of the macro name, to see a list of suggested
macros. In this example we're inserting the cheese macro.

To edit an existing macro: Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.

Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Required</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Content Type to Display</td>
<td>No</td>
<td>titles</td>
<td>Available values:</td>
</tr>
<tr>
<td>(content)</td>
<td></td>
<td></td>
<td>• titles — Display the title, creator, space, and created date stamp for each blog post.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>• excerpts — Display a short excerpt from each blog post. If the post contains an Excerpt macro, the Blog Posts macro will display the content defined in the Excerpt macro. If the post does not contain an Excerpt macro, the Blog Posts macro will display the first few sentences of the post.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>• entire - Display the whole content of each blog post.</td>
</tr>
</tbody>
</table>
| **Time Frame**  
| (time) | No | no limit | Specify how far back in time Confluence should look for the blog posts to be displayed.  
| | | | Available values:  
| | | | • m — Minutes  
| | | | • h — Hours, so ‘12h’ displays blog posts created in the last twelve hours.  
| | | | • d — Days, so ‘7d’ displays blog posts created in the last seven days.  
| | | | • w — Weeks  

| **Restrict to these Labels**  
| (label) | No | None | Filter the results by label. The macro will display only the blog posts which are tagged with the label(s) you specify here.  
| | | | You can specify one or more label values, separated by a comma or a space.  
| | | | • To exclude content which matches a given label, put a minus sign (-) immediately in front of that label value. For example: If you specify a label value of -badpage you will get only content which is not labeled with ‘badpage’.  
| | | | • To indicate that the results **must** match a given label value, put a plus sign (+) immediately in front of that label value. For example: If you specify a label value of +superpage,+goodpage you will get only content which has at least two labels, being ‘superpage’ and ‘goodpage’.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Restrict to these Authors</strong></td>
<td>No</td>
<td>None</td>
<td>Filter the results by author. The macro will display only the blog posts which are written by the author(s) you specify here.</td>
</tr>
<tr>
<td><strong>Restrict to these Spaces</strong></td>
<td>No</td>
<td>@self, i.e. the space which contains the page on which the macro is coded</td>
<td>This parameter allows you to filter content by space. The macro will display only the pages which belong to the space(s) you specify here. You can specify one or more space keys, separated by a comma or a space.</td>
</tr>
</tbody>
</table>
|                                  |         |       | • To exclude content in a specific space, put a minus sign (-) immediately in front of that space key. For example: If you specify a space key of -BADSPACE you will get only content which is not in the BADSPACE.  
|                                  |         |       | • To indicate that the results must come from a specific space, put a plus sign (+) immediately in front of that space key. For example: If you specify a space key of +GOODSPACE you will get only content in GOODSPACE. (Note that this is not particularly useful, because each content item belongs to one space only. If you put a plus sign next to one space key and list other space keys too, the other space keys will be ignored.) |
|                                  |         |       | Special values:                                                                                                                                |

• @self — The current space.
• @personal — All personal spaces.
• @global — All site spaces.
• @favorite — The spaces you have marked as favorite.
• @favourite — The same as @favorite above.
• @all — All spaces in your Confluence site.
• * — The same as @all above.

When specifying a personal space, remember to use the tilde (~) sign in front of the username, such as ~jbloggs or ~jbloggs@example.com.

<table>
<thead>
<tr>
<th>Maximum Number of Blog Posts (max)</th>
<th>No</th>
<th>15</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Specify the maximum number of results to be displayed. Note that the results are sorted first, and then the maximum parameter is applied.</strong></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Sort By (sort)</th>
<th>No</th>
<th>creation</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Specify how the results should be sorted. If this parameter is not specified, the sort order defaults to descending order (newest first) based on the creation date.</strong></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Values:

• title — Sort alphabetically by title.
• creation — Sort by the date on which the content was added.
• modified — Sort by the date on which the content was last updated.
Reverse Sort (reverse)

No

false

Select to change the sort from descending to ascending order (oldest first). Use this parameter in conjunction with the Sort By parameter. This parameter is ignored if the Sort By parameter is not specified.

In storage format and wikimarkup a value of true changes the sort order.

Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

Macro name: blog-posts

Macro body: None.

```{blog-posts:content=titles|spaces=@self,ds|author=jsmith|time=4w|reverse=true|sort=creation|max=10|label=chocolate,cookies}
```

Change-History Macro

The Change-History macro shows the history of updates made to a page: version number, author, date and comment. It displays the information inline.

Screenshot: The Change-History macro in Confluence

<table>
<thead>
<tr>
<th>Version</th>
<th>Date</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Current Version (v. 4)</td>
<td>Feb 19, 2013 16:27</td>
<td>Rach Admin: Formatting change</td>
</tr>
<tr>
<td>v. 3</td>
<td>Feb 19, 2013 16:27</td>
<td>Rach Admin: Added the change history macro</td>
</tr>
<tr>
<td>v. 2</td>
<td>Feb 19, 2013 16:26</td>
<td>Rach Admin: Added a macro</td>
</tr>
<tr>
<td>v. 1</td>
<td>Feb 19, 2013 16:25</td>
<td>Rach Admin</td>
</tr>
</tbody>
</table>

To add the Change-History macro to a page:

1. From the editor toolbar, choose Insert

   > Other Macros

2. Find and select the required macro

Speed it up with autocomplete: Type { and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.
To edit an existing macro: Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.

Note: There are no parameters for this macro.

Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

Macro name: change-history

Macro body: None.

{change-history}

Chart Macro

The Chart macro allows you to display a chart based on tabular data. When you add the macro to a page, you:

- supply the data to be charted by the macro as a table in the placeholder of the macro.
- edit the macro parameters in the Macro Browser to configure the format of the chart.

Screenshot 1: A table of data in the Chart macro placeholder

Screenshot 2: The resulting chart

On this page:

- Using the Chart Macro

  - Wiki markup example
Using the Chart Macro

To add the Chart macro to a page:

1. Edit the page and use autocomplete to add the Chart macro. (Type '{chart}').
2. Enter your chart data as one or more tables in the body of the macro placeholder. (See the screenshot above.)
3. Click the macro placeholder and choose Edit.
4. Select a chart type using the Type parameter (see below).
5. Choose other parameter settings in the macro browser, as described below.
6. Click Refresh in the 'Preview' area, to check that the chart appears as you expect.
7. Click Save to add the chart to your page.
8. Click Save again when you are ready to save the page.

Parameters

Chart Type Parameters | Display Control Parameters | Title and Label Parameters | Data Specification Parameters | Color Parameters | Axis Parameters | Pie Chart Parameters | Attachment Parameters

Chart Type Parameters

These parameters determine the type of chart to display and the way the chart looks.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
</table>
| Type             | pie     | The type of chart to display. XY charts have numerical x- and y-axes. The x values may optionally be time-based (see the Time Series parameter).  
|                  |         | Standard — pie, bar, line, area  
|                  |         | XY Plots — xyArea, xyBar, xyLine, xyStep, xyStepArea, scatter, timeSeries  
|                  |         | Other — gantt |
| Display Orientation | vertical | Applies to area, bar and line charts.  
|                  |         | • vertical — y-axis is vertical  
|                  |         | • horizontal — x-axis is vertical |
| Show in 3D       | false     | Applies to area, bar and line charts. |
| Stacked Values | false | Applies to area and bar charts. |
| Show shapes | true | Applies to line charts. Shapes are shown at each data point. |
| Opacity | • 75 percent for 3D charts  
• 50 percent for non-stacked area charts  
• 100 percent for all other charts | A percentage value between 0 (transparent) and 100 (opaque) that determines how opaque the foreground areas and bars are. |

### Display Control Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Width</td>
<td>300</td>
<td>The width of the chart in pixels.</td>
</tr>
<tr>
<td>Height</td>
<td>300</td>
<td>The height of the chart in pixels.</td>
</tr>
</tbody>
</table>
| Display rendered data | false | Sets whether to display the rendered body of the macro (usually the data tables). By default, the chart data table isn't rendered.  
• before — the data are displayed before the chart.  
• after — the data are displayed after the chart. |
| Image format | png | The image format to be used for the chart.  
• png  
• jpg |

### Title and Label Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chart Title</td>
<td>none</td>
<td>The title of the chart.</td>
</tr>
<tr>
<td>Chart Subtitle</td>
<td>none</td>
<td>A subtitle for the chart, using a smaller font than for Title.</td>
</tr>
<tr>
<td>Horizontal-axis Label</td>
<td>none</td>
<td>The label for the x-axis (domain).</td>
</tr>
<tr>
<td>Vertical-axis Label</td>
<td>none</td>
<td>The label for the y-axis (range).</td>
</tr>
<tr>
<td>Show Legend</td>
<td>true</td>
<td>Show a legend or key.</td>
</tr>
</tbody>
</table>

### Data Specification Parameters

The data for the chart is taken from tables found when the macro body is rendered. These options control how this data is interpreted. By default, numeric and date values are interpreted according to the Confluence global default language (locale) formats. If conversion fails, other languages defined in Confluence will be tried. Additional conversion options can be specified using the parameters below.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tables</td>
<td>all first level tables</td>
<td>Comma separated list of table ids and/or table numbers (starting at 1) contained within the body of the macro that will be used as the data for the chart. If data tables are embedded in other tables, then table selection will be required. This occurs when more complex formatting is done (for example using section and column macros).</td>
</tr>
<tr>
<td><strong>Columns</strong></td>
<td>all columns</td>
<td>Comma separated list of column labels and/or column titles and/or column numbers for tables used for chart data. This applies to all tables processed. Columns are enumerated starting at 1. Column label is the text for the column in the header row. Column title is the (html) title attribute for the column in the header row.</td>
</tr>
</tbody>
</table>
| **Content Orientation** | horizontal | • **vertical** — data table columns will be interpreted as series.  
• **horizontal** — data tables rows will be interpreted as series. |
| **Time Series** | false | • true — the x values in an XY plot will be treated as time series data and so will be converted according to date formats. |
| **Date format** | Confluence language defined date formats | For time series data, the date format allows for additional customization of the conversion of data to date values. If a **Date format** is specified, it will be the first format used to interpret date values. Specify a format that matches the time series data. See [simple date format](#). |
| **Time Period** | Day | The time period for time series data. Defines the granularity of how the data is interpreted. Valid values are: **Millisecond**, **Second**, **Minute**, **Hour**, **Day**, **Week**, **Month**, **Quarter**, **Year**. |
| **Language** | none | Use in combination with the **Country** parameter to form a locale. These additional number and date formats will be used for data conversion before the default languages. Valid values are 2 character [ISO 639-1 alpha-2 codes](#). |
| **Country** | none | Use in combination with the **Language** parameter to form a locale. Valid values are 2 character [ISO 3166 codes](#). |
| **Forgive** | true | • true — the macro tries to convert numeric and date values that do not totally match any of the default or user-specified formats.  
• false — enforce strict data format. Data format errors will cause the chart to not be produced. |

**Color Parameters**

Colors are specified using hexadecimal notation or HTML color names.

<table>
<thead>
<tr>
<th><strong>Parameter</strong></th>
<th><strong>Default</strong></th>
<th><strong>Description</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Background Color</strong></td>
<td>White</td>
<td>Background of the chart.</td>
</tr>
<tr>
<td><strong>Border Color</strong></td>
<td>no border</td>
<td>Border around the chart.</td>
</tr>
<tr>
<td><strong>Colors</strong></td>
<td>Comma-separated list of colors used to customize category, sections, and series colors.</td>
<td></td>
</tr>
</tbody>
</table>

**Axis Parameters**

Depending on the chart type, the range and domain axis may be customized. These values are automatically generated based on the data but can be overridden by specifying one or more more of these parameters.

<table>
<thead>
<tr>
<th><strong>Parameter</strong></th>
<th><strong>Default</strong></th>
<th><strong>Description</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Range Minimum Value</strong></td>
<td>none</td>
<td>Range axis lower bound.</td>
</tr>
</tbody>
</table>
### Range Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Range Maximum Value</td>
<td>none</td>
<td>Range axis upper bound.</td>
</tr>
<tr>
<td>Range Axis Tick Unit</td>
<td>none</td>
<td>Range axis units between axis tick marks.</td>
</tr>
<tr>
<td>Range Axis Label Angle</td>
<td>none</td>
<td>Angle for the range axis label in degrees.</td>
</tr>
<tr>
<td>Domain Axis Lower Bound</td>
<td>none</td>
<td>Only applies to XY plots. Domain axis lower bound. For a date axis, this value must be expressed in the date format specified by the Date format parameter.</td>
</tr>
<tr>
<td>Domain Axis Upper Bound</td>
<td>none</td>
<td>Only applies to XY plots. Domain axis upper bound. For a date axis, this value must be expressed in the date format specified by the Date format parameter.</td>
</tr>
<tr>
<td>Domain Axis Tick Unit</td>
<td>none</td>
<td>Only applies to XY plots. Domain axis units between axis tick marks. For a date axis, this value represents a count of the units specified in the Time Period parameter. The Time Period unit can be overridden by specifying a trailing character: y (years), M (months), d (days), h (hours), m (minutes), s (seconds), u (milliseconds).</td>
</tr>
<tr>
<td>Domain Axis Label Angle</td>
<td>none</td>
<td>Only applies to XY plots. The angle for the domain axis label, in degrees.</td>
</tr>
</tbody>
</table>

### Date Tick Mark Position

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Category Label Position</td>
<td>none</td>
<td>Placement of the axis label text for categories.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- up45 — 45 degrees going upward</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- up90 — 90 degrees going upward</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- down45 — 45 degrees going downward</td>
</tr>
<tr>
<td>Date Tick Mark Position</td>
<td>start</td>
<td>Placement of the date tick mark.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- start — tick mark is at the start of the date period.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- middle — tick mark is in the middle of the date period.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- end — tick mark is at the end of the date period.</td>
</tr>
</tbody>
</table>

### Pie Chart Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pie Section Label</td>
<td>Show only the pie section key value</td>
<td>Format for how pie section labels are displayed. The format uses a string with special replacement variables:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- %0% is replaced by the pie section key.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- %1% is replaced by the pie section numeric value.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- %2% is replaced by the pie section percent value.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Example 1: &quot;$%0% = %1%&quot; would display something like &quot;Independent = 20&quot;</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Example 2: &quot;$%0% (%2%)&quot; would display something like &quot;Independent (20%)&quot;</td>
</tr>
</tbody>
</table>
### Pie Chart Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
</table>
| **Attachment**  | none    | The name and location with which the chart image will be saved as an attachment. The user must be authorized to add attachments to the page specified.  
  - *attachmentName.png* — the chart is saved as an attachment to the current page.  
  - page*attachmentName.png* — the chart is saved as an attachment to the page name provided.  
  - space:page*attachmentName.png* — the chart is saved as an attachment to the page name provided in the space indicated. |
| **Attachment Version** | new | Defines the the versioning mechanism for saved charts.  
  - new — creates new version of the attachment.  
  - replace — replaces all previous versions of the chart. To replace an existing attachment, the user must be authorized to remove attachments for the page specified.  
  - keep — only saves a new attachment if an existing export of the same name does not exist. An existing attachment will not be changed or updated. |
| **Attachment Comment** | none | Comment used for a saved chart attachment. |
| **Thumbnail**   | false  | true — the chart image attachment will be shown as a thumbnail. |

### Examples

#### Pie Chart

<table>
<thead>
<tr>
<th>Parameters in Macro Browser</th>

</tr>
<tr>
<td><strong>Height</strong></td>
<td><strong>300</strong></td>
<td></td>
</tr>
<tr>
<td><strong>Stacked Values</strong></td>
<td><strong>true</strong></td>
<td></td>
</tr>
</tbody>
</table>

### Satisfaction 2009 2010 2011

- **Very satisfied**
  - 2009: 12
  - 2010: 23
  - 2011: 31

- **Satisfied**
  - 2009: 1
  - 2010: 34
  - 2011: 36

- **Dissatisfied**
  - 2009: 4
  - 2010: 6
  - 2011: 22

- **Very dissatisfied**
  - 2009: 2
  - 2010: 7
  - 2011: 12

Gantt Chart

<table>
<thead>
<tr>
<th>Parameters in Macro Browser</th>
<th>Data Table in Macro Placeholder</th>
<th>Rendered Chart</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Type</strong></td>
<td><strong>gantt</strong></td>
<td></td>
</tr>
<tr>
<td><strong>Width</strong></td>
<td><strong>300</strong></td>
<td></td>
</tr>
<tr>
<td><strong>Height</strong></td>
<td><strong>200</strong></td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Plan</th>
<th>Start</th>
<th>End</th>
<th>Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stage 1</td>
<td>6/25/2013</td>
<td>7/10/2013</td>
<td>30%</td>
</tr>
<tr>
<td>Stage 2</td>
<td>7/13/2013</td>
<td>11/28/2013</td>
<td>40%</td>
</tr>
</tbody>
</table>
You must include the two leading commas in the column parameter (for example ,,1,2,3,4) for the chart to be created correctly.

**Code examples**

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** chart

**Macro body:** Accepts rich text, consisting of tables that hold the chart's data.

This macro recognizes a large number of parameters, listed here by type.

> See all parameters...

**Chart type parameters**

These parameters determine the type of chart to display and how the chart looks.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Required</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>type</td>
<td>No</td>
<td>pie</td>
<td>The type of chart to display. XY charts have numerical x- and y-axes. The x values may optionally be time-based. See the timeSeries parameter. <code>Available values:</code></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td><code>Standard charts</code> – pie, bar, line, area <code>XY plots</code> – xyArea, xyBar, xyLine, xyStep, xyStepArea, scatter, timeSeries <code>Other charts</code> – gantt</td>
</tr>
<tr>
<td>orientation</td>
<td>No</td>
<td>vertical</td>
<td>The display orientation. Applies to area, bar and line charts. <code>Available values:</code></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td><code>vertical</code> – y-axis is vertical <code>horizontal</code> – x-axis is vertical</td>
</tr>
<tr>
<td>3D</td>
<td>No</td>
<td>false</td>
<td>Show in three dimensions. Applies to area, bar and line charts.</td>
</tr>
<tr>
<td>stacked</td>
<td>No</td>
<td>false</td>
<td>Stacked values. Applies to area and bar charts.</td>
</tr>
<tr>
<td>showShapes</td>
<td>No</td>
<td>true</td>
<td>Applies to line charts. Shapes are shown at each data point.</td>
</tr>
</tbody>
</table>
opacity: No
- 75 percent for 3D charts
- 50 percent for non-stacked area charts
- 100 percent for all other charts

A percentage value between 0 (transparent) and 100 (opaque) that determines how opaque the foreground areas and bars are.

---

### Chart display parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Required</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>width</td>
<td>No</td>
<td>300</td>
<td>The width of the chart in pixels.</td>
</tr>
<tr>

<td>yLabel</td>
<td>No</td>
<td>(None)</td>
<td>The label for the y-axis (range).</td>
</tr>
<tr>
<td>legend</td>
<td>No</td>
<td>false</td>
<td>Determines whether to show a legend (key) for the chart.</td>
</tr>
</tbody>
</table>

### Chart data parameters

The data for the chart is taken from tables found in the macro body. The parameters below control how this data is interpreted. By default, numeric and date values are interpreted according to the Confluence global default language (locale) formats. If conversion fails, other languages defined in Confluence will be tried. You can specify additional conversion options using the parameters below.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Required</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
</table>

Created in 2019 by Atlassian. Licensed under a [Creative Commons Attribution 2.5 Australia License](https://creativecommons.org/licenses/by/2.5/au/).
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Required</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>tables</td>
<td>No</td>
<td>All first level tables</td>
<td>You can supply a comma-separated list of table IDs and/or table numbers (starting at 1) contained within the body of the macro that will be used as the data for the chart. If data tables are embedded in other tables, then table selection will be required. This occurs when more complex formatting is done (for example using section and column macros).</td>
</tr>
<tr>
<td>columns</td>
<td>No</td>
<td>All columns</td>
<td>You can supply a comma-separated list of column labels and/or column titles and/or column numbers for tables used for chart data. This applies to all tables processed. Columns are enumerated starting at 1. Column label is the text for the column in the header row. Column title is the HTML title attribute for the column in the header row.</td>
</tr>
</tbody>
</table>
| dataOrientation | No      | horizontal | The content orientation. By default, the data tables will be interpreted as columns (horizontally) representing domain and x values. Available values:  
- **vertical** – data table columns will be interpreted as series.  
- **horizontal** – data tables rows will be interpreted as series. |
| timeSeries    | No       | false   | If 'true', the x values in an XY plot will be treated as time series data and so will be converted according date formats.                                                                                   |
| dateFormat    | No       | Confluence defined date formats | For time series data, the date format allows for additional customization of the conversion of data to date values. If a dateFormat is specified, it will be the first format used to interpret date values. Specify a format that matches the time series data. See simple date format. |
| timePeriod    | No       | day     | The time period for time series data. Defines the granularity of how the data is interpreted. Available values: millisecond, second, minute, hour, day, week, month, quarter, year |
| language      | No       | (None)  | Use in combination with the country parameter to form a locale. These additional number and date formats will be used for data conversion before the default languages. Available values are the two-character ISO 639-1 alpha-2 codes. |
| country       | No       | (None)  | Use in combination with the language parameter to form a locale. Valid values are the two-character ISO 3166 codes. |
| forgive | No | true | Determines whether the macro will forgive (allow) some data formatting errors. Available values:  
|---------|----|------|---|
|         |    |      | • true — the macro tries to convert numeric and date values that do not totally match any of the default or user-specified formats.  
|         |    |      | • false — the macro enforces strict data formatting. If there are data format errors, the chart will not be produced. |

### Chart color parameters

Colors are specified using hexadecimal notation or HTML color names.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Required</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>bgColor</td>
<td>No</td>
<td>White</td>
<td>Background color of the chart.</td>
</tr>
<tr>
<td>borderColor</td>
<td>No</td>
<td>No border</td>
<td>Color of the border around the chart.</td>
</tr>
<tr>
<td>colors</td>
<td>No</td>
<td>A comma-separated list of colors used to customize the colors of categories, sections, and series.</td>
<td></td>
</tr>
</tbody>
</table>

### Chart axis parameters

Depending on the chart type, the range and domain axis may be customized. These values are automatically generated based on the data but can be overridden by specifying one or more more of these parameters.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Required</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>rangeAxisLowerBound</td>
<td>No</td>
<td>(None)</td>
<td>Minimum value for the range axis.</td>
</tr>
<tr>
<td>rangeAxisUpperBound</td>
<td>No</td>
<td>(None)</td>
<td>Maximum value for the range axis.</td>
</tr>
<tr>
<td>rangeAxisTickUnit</td>
<td>No</td>
<td>(None)</td>
<td>Range axis units between axis tick marks.</td>
</tr>
<tr>
<td>rangeAxisLabelAngle</td>
<td>No</td>
<td>(None)</td>
<td>Angle for the range axis label in degrees.</td>
</tr>
<tr>
<td>domainAxisLowerBound</td>
<td>No</td>
<td>(None)</td>
<td>Only applies to XY plots. Domain axis lower bound. For a date axis, this value must be expressed in the date format specified by the dateFormat parameter.</td>
</tr>
<tr>
<td>domainAxisUpperBound</td>
<td>No</td>
<td>(None)</td>
<td>Only applies to XY plots. Domain axis upper bound. For a date axis, this value must be expressed in the date format specified by the dateFormat parameter.</td>
</tr>
<tr>
<td>domainAxisTickUnit</td>
<td>No</td>
<td>(None)</td>
<td>Only applies to XY plots. Domain axis units between axis tick marks. For a date axis, this value represents a count of the units specified in the timePeriod parameter. The timePeriod unit can be overridden by specifying a trailing character: y (years), M (months), d (days), h (hours), m (minutes), s (seconds), u (millisecond).</td>
</tr>
<tr>
<td>domainAxisLabelAngle</td>
<td>No</td>
<td>(None)</td>
<td>Only applies to XY plots. The angle for the domain axis label, in degrees.</td>
</tr>
</tbody>
</table>
### Pie chart Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Required</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
</table>
| pieSectionLabel         | No       | Show only the pie section key value | Format of pie section labels. The format uses a string with special replacement variables:  
  - `%0%` is replaced by the pie section key.
  - `%1%` is replaced by the pie section numeric value.
  - `%2%` is replaced by the pie section percent value.
  Example 1: To display something like 'Independent = 20':
  ![Example 1](image1)
  Example 2: To display something like 'Independent (20%)':
  ![Example 2](image2)
| pieSectionExplode       | No       | No exploded sections | A comma-separated list of pie keys that are to be shown exploded. Note: requires jFreeChart version 1.0.3 or higher. |

### Chart attachment parameters

These are advanced options that can be used for chart versioning, to enable automation and to improve performance. Use these options carefully! Normally, the chart image is regenerated each time the page is displayed. These options allow for the generated image to be saved as an attachment and have subsequent access to re-use the attachment. This can be useful especially when combined with the Cache plugin to improve performance. Depending on the options chosen, chart images can be versioned for historical purposes.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Required</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Parameter</td>
<td>Value</td>
<td>Description</td>
<td></td>
</tr>
<tr>
<td>-------------------</td>
<td>-------</td>
<td>-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td></td>
</tr>
</tbody>
</table>
| attachment        | No    | The name and location where the chart image will be saved as an attachment. The user must be authorized to add attachments to the page specified. Available syntax for this parameter:  
  - `^attachmentName.png` — the chart is saved as an attachment to the current page.  
  - `page_name^attachmentName.png` — the chart is saved as an attachment to the page name provided.  
  - `name^attachmentName.png` — the chart is saved as an attachment to the page name provided in the space indicated. |
| attachmentVersion | No    | new                                                                                                                                          Defines the the versioning mechanism for saved charts. Available values:  
  - `new` — creates new version of the attachment.  
  - `replace` — replaces all previous versions of the chart. To replace an existing attachment, the user must be authorized to remove attachments for the page specified.  
  - `keep` — only saves a new attachment if an existing export of the same name does not exist. An existing attachment will not be changed or updated. |
| attachmentComment | No    | (None)                                                                                                                                       Comment used for a saved chart attachment. |
| thumbnail         | No    | false                                                                                                                                       If `true`, the chart image attachment will be shown as a thumbnail (small, expandable) image. |

**Wiki markup example**

Below is a simple example of a pie chart. See more examples in Wiki Markup Examples for Chart Macro.

```
{chart:type=pie|title=Fish Sold}
|| Fish Type || 2004 || 2005 ||
|| Herring | 9,500 | 8,300 |
|| Salmon | 2,900 | 4,200 |
|| Tuna | 1,500 | 1,500 |
{chart}
```

**Do more with Confluence**

Create interesting and engaging charts for your Confluence pages with these charts and diagrams apps on the Atlassian Marketplace:

- **Gliffy Diagram for Confluence**: Add Gliffy flowcharts, UI wireframes, ERD, UML, BPMN, and network diagrams directly to your Confluence pages
- **draw.io for Confluence**: Search through a huge library of shapes, as well as raster and SVG images that you can use offering you great flexibility
- **Lucidchart Diagrams OnPrem**: Draw professional diagrams that communicate important ideas, information, and processes

**Wiki Markup Examples for Chart Macro**

Created in 2019 by Atlassian. Licensed under a Creative Commons Attribution 2.5 Australia License.
This page is an extension of the documentation for the Chart Macro. This page contains additional examples for the Chart macro.

Pie chart

Here is a simple example of a pie chart.

Wiki markup

```wiki
{chart:type=pie|title=Fish Sold}
|| Fish Type || 2004 || 2005 ||
|| Herring | 9,500 | 8,300 |
|| Salmon | 2,900 | 4,200 |
|| Tuna | 1,500 | 1,500 |
{chart}
```

Resulting chart

![Fish Sold](chart)

Bar chart

Here is a simple example of a bar chart.

Wiki markup

```wiki
{chart:type=bar|title=Fish Sold}
|| Fish Type || 2004 || 2005 ||
|| Herring | 9,500 | 8,300 |
|| Salmon | 2,900 | 4,200 |
|| Tuna | 1,500 | 1,500 |
{chart}
```

Resulting chart

![Fish Sold](chart)
Time series chart

Here is an example of a time series chart.

Wiki markup

```wiki
{chart:type=timeSeries|dateFormat=MM/yyyy|timePeriod=Month|
dataOrientation=vertical|rangeAxisLowerBound=0|domainaxisrotateticklabel=true}|| Month || Revenue ||
| 1/2005 | 31.8 |
| 2/2005 | 41.8 |
| 3/2005 | 51.3 |
| 4/2005 | 33.8 |
| 5/2005 | 27.6 |
| 6/2005 | 49.8 |
| 7/2005 | 51.8 |
| 8/2005 | 77.3 |
| 9/2005 | 73.8 |
| 10/2005 | 97.6 |
| 11/2005 | 101.2 |
| 12/2005 | 113.7 |
|| Month || Expenses ||
| 1/2005 | 41.1 |
| 2/2005 | 43.8 |
| 3/2005 | 45.3 |
| 4/2005 | 45.0 |
| 5/2005 | 44.6 |
| 6/2005 | 43.8 |
| 7/2005 | 51.8 |
| 8/2005 | 52.3 |
| 9/2005 | 53.8 |
| 10/2005 | 55.6 |
| 11/2005 | 61.2 |
| 12/2005 | 63.7 |
{chart}
```
Resulting chart

Here is an example of an XY line chart.

Wiki markup

```
{chart:type=xyline}

<table>
<thead>
<tr>
<th></th>
<th></th>
<th>12</th>
<th>14</th>
<th>23</th>
</tr>
</thead>
<tbody>
<tr>
<td>Revenue</td>
<td>41.1</td>
<td>31.8</td>
<td>12.4</td>
<td></td>
</tr>
<tr>
<td>Expense</td>
<td>31.1</td>
<td>41.8</td>
<td>43.6</td>
<td></td>
</tr>
</tbody>
</table>
{chart}
```

Resulting chart

Here is an example of an XY bar chart.

XY bar chart

Here is an example of an XY bar chart.
Wiki markup

```
{chart:type=xybar|opacity=60}
|||| 2005 || 2006 || 2007 ||
| Revenue | 41.1 | 31.8 | 12.4 |
| Expense  | 31.1 | 41.8 | 43.6 |
{chart}
```

Resulting chart

![XY area chart](image)

XY area chart

Here is an example of an XY area chart.

Wiki markup

```
{chart:type=xyarea}
|||| 12 || 14 || 23 ||
| Revenue | 41.1 | 31.8 | 12.4 |
| Expense  | 31.1 | 41.8 | 43.6 |
{chart}
```

Resulting chart
Area chart

Here are two examples of area charts.

Wiki markup for area chart 1

```markdown
{chart:type=area|dataDisplay=true|legend=true|width=300|height=300|opacity=50}
|| Satisfaction || 2002 || 2003 || 2004 ||
| Very satisfied | 20 | 23 | 34 |
| Satisfied | 40 | 34 | 23 |
| Disatisfied | 25 | 26 | 25 |
| Very dissatisfied | 15 | 17 | 18 |
{chart}
```

Resulting area chart 1
<table>
<thead>
<tr>
<th>Satisfied</th>
<th>40</th>
<th>34</th>
<th>23</th>
</tr>
</thead>
<tbody>
<tr>
<td>Disatisfied</td>
<td>25</td>
<td>26</td>
<td>25</td>
</tr>
<tr>
<td>Very dissatisfied</td>
<td>15</td>
<td>17</td>
<td>18</td>
</tr>
</tbody>
</table>

Wiki markup for area chart 2

```markdown
{chart:type=area|dataDisplay=true|legend=true|width=300|height=300|stacked=true}  
|| Satisfaction || 2002 || 2003 || 2004 ||  
| Very satisfied | 12 | 23 | 31 |
| Satisfied | 1 | 34 | 36 |
| Disatisfied | 4 | 6 | 22 |
| Very dissatisfied | 2 | 7 | 12 |
```

Resulting area chart 2

![Resulting area chart 2](chart)

Cheese Macro

The Cheese macro simply displays the words "I like cheese!" You can use this macro to test the Confluence macro functionality.

To add the Cheese macro to a page:

1. From the editor toolbar, choose **Insert**
   ```markdown
   + -
   > **Other Macros**
   ```
2. Find and select the required macro
**Speed it up with autocomplete:** Type `{ and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.

![Macro suggestions](image)

**To edit an existing macro:** Click the macro placeholder and choose **Edit**. This will open the macro details, so you can edit the macro parameters.

![Edit](image)

### Parameters

**Note:** There are no parameters for this macro.

**Wiki markup example**

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** cheese

**Macro body:** None.

```
{cheese}
```

### Children Display Macro

Use the Children Display macro to list the child pages of a page and the further descendants (children's children). By default, the macro displays links to the child pages as shown in the screenshot below. People viewing the page will see only the links for pages that they have permission to view.

**Screenshot: The Children Display macro in Confluence**

This is the Children Display macro

- Step 1 - download the game
- Step 2 - Play
- Step 3 - share your favourite nerd
- Sample page
- Games as a communication medium

**Using the Children Display macro**

**To add the Children Display macro to a page:**

1. From the editor toolbar, choose **Insert**
   
   ![Insert](image)

   > **Other Macros**

2. Find and select the required macro

**Speed it up with autocomplete:** Type `{ and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.
To edit an existing macro: Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.

Example

This list of child pages is generated by a Children Display macro on this page:

Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Show Descendants</td>
<td>false</td>
<td>Choose whether to display all the parent page's descendants.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>If true shows the complete tree of pages underneath the parent page, regardless of Depth of Descendants.</td>
</tr>
<tr>
<td>Parent Page</td>
<td>current</td>
<td>Specify the page to display children for, from either the current space or a different space. Enter:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• '/' — to list the top-level pages of the current space, i.e. those without parents.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• 'pagename' — to list the children of the specified page.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• 'spacekey:' — to list the top-level pages of the specified space.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• 'spacekey:pagename' — to list the children of the specified page in the specified space.</td>
</tr>
<tr>
<td>Number of Children</td>
<td>none</td>
<td>Restrict the number of child pages that are displayed at the top level.</td>
</tr>
<tr>
<td>(first)</td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Depth of Descendants</strong>&lt;br&gt;(depth)</td>
<td>none</td>
<td>Enter a number to specify the depth of descendants to display. For example, if the value is 2, the macro will display 2 levels of child pages. This setting has no effect if Show Descendants is enabled.</td>
</tr>
<tr>
<td><strong>Heading Style</strong>&lt;br&gt;(style)</td>
<td>none</td>
<td>Choose the style used to display descendants.</td>
</tr>
<tr>
<td><strong>Include Excerpts</strong>&lt;br&gt;(excerpt)</td>
<td>none</td>
<td>Allows you to include a short excerpt under each page in the list. Choose between:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <strong>None</strong> - no excerpt will be displayed</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <strong>Simple</strong> - displays the first line of text contained in an Excerpt macro any of the returned pages. If there is not an Excerpt macro on the page, nothing will be shown.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <strong>Rich content</strong> - displays the contents of an Excerpt macro, or if there is not an Excerpt macro on the page, the first part of the page content, including formatted text, images and some macros.</td>
</tr>
<tr>
<td><strong>Sort Children By</strong>&lt;br&gt;(sort)</td>
<td>Manual if manually ordered, otherwise alphabetical</td>
<td>Optional. Choose:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <strong>creation</strong> — to sort by content creation date</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <strong>title</strong> — to sort alphabetically on title</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <strong>modified</strong> — to sort of last modification date.</td>
</tr>
<tr>
<td><strong>Reverse Sort</strong>&lt;br&gt;(reverse)</td>
<td>false</td>
<td>Use with the Sort Children By parameter. When set, the sort order changes from ascending to descending.</td>
</tr>
</tbody>
</table>

**Wiki markup example**

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** children

**Macro body:** None.

```
{children:reverse=true|sort=creation|style=h4|page=Home|excerpt=none|first=99|depth=2|all=true}
```

**Do more with Confluence**

Extend Confluence with one of the hundreds of other macros in the Atlassian Marketplace. Here are a
couple for organizing your Confluence page:

- **Navitabs**: Create tabs to group content to improve navigation between Confluence pages
- **Advanced Children Display for Confluence**: combine Confluence's built-in children display and table of contents macros
- **Subspace Navigation for Confluence**: Use the navigation macro to create overviews of the menu within a Confluence page

## Code Block Macro

The Code Block macro allows you to display source code in your page with syntax highlighting, like the one below:

```java
public static void main(String[] args)
{
    System.out.println("Hello World!");
}
```

### Add the Code Block Macro

1. From the editor toolbar, choose **Insert**
   
   + > **Other Macros**

2. Find and select the required macro

**Speed it up with autocomplete**: Type `{` and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.

You type the code block directly into the macro placeholder in the editor. Note that any white space contained in the placeholder is not manipulated in any way by the Code Block macro. This is to provide the writer with flexibility over code indentation.

### Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Syntax highlighting (language)</strong></td>
<td>java</td>
<td>Specifies the language (or environment) for syntax highlighting. The default language is Java but you can choose from one of the following languages/environments:</td>
</tr>
<tr>
<td>-----------------------------------</td>
<td>-----</td>
<td>---</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ActionScript</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• AppleScript</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Bash</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• C#</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• C++</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• CSS</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ColdFusion</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Delphi</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Diff</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Erlang</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Groovy</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• HTML and XML</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Java</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Java FX</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• JavaScript</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Plain Text</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• PowerShell</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Python</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Ruby</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• SQL</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Sass</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Scala</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Visual Basic</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• YAML</td>
</tr>
<tr>
<td><strong>Title</strong></td>
<td>none</td>
<td>Adds a title to the code block. If specified, the title will be displayed in a header row at the top of the code block.</td>
</tr>
<tr>
<td><strong>Collapsible (collapse)</strong></td>
<td>false</td>
<td>If selected, the code macro’s content will be collapsed upon visiting or refreshing the Confluence page. Clicking the expand source link allows you to view this content. If false, the code macro’s content is always displayed in full.</td>
</tr>
<tr>
<td><strong>Show line numbers (linenums)</strong></td>
<td>false</td>
<td>If selected, line numbers will be shown to the left of the lines of code.</td>
</tr>
<tr>
<td><strong>First line number (firstline)</strong></td>
<td>1</td>
<td>When Show line numbers is selected, this value defines the number of the first line of code.</td>
</tr>
</tbody>
</table>
Configure the Code Block macro

You can configure the Code Block macro to use a specific language and theme by default and also upload new languages. You need Confluence Administrator permissions to change the default theme and language and System Administrator permissions to upload new languages.

To set the default appearance of code blocks in your site:

1. Choose the cog icon, then choose General Configuration
2. Choose Configure Code Macro
3. Select a Default Theme and Default Language
4. Choose Save

All new code blocks will use the default theme and language unless you specify otherwise. Existing code blocks will be unchanged.

To add an additional language:

1. Choose the cog icon, then choose General Configuration
2. Choose Configure Code Macro
3. Choose Add a new language
4. Locate your language file and enter a Name for the new language (this will appear when selecting the language)
5. Choose Add

Language files must be correctly formatted JavaScript files and adhere to the Custom Brush syntax.

To disable or remove a user-installed language:

1. Choose the cog icon, then choose General Configuration
2. Choose Manage Apps
3. Go to User-installed Apps and locate the app for your uploaded language - it will appear like this 'Custom Code Macro Highlighting for...'
4. Choose Uninstall or Disable

The language will no longer appear in the Code Macro.
Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** code

**Macro body:** Accepts plain text.

```markdown
{code:title=This is my title|theme=FadeToGrey|linenums=true|language=java|firstline=0001|collapse=true}
This is my code
{code}
```

---

**Do more with Confluence**

Extend Confluence with one of the hundreds of other macros in the Atlassian Marketplace. Some of our most popular include:

- **Code Pro for Confluence** - Get a real-time view of your code from any source in Confluence.
- **Include Bitbucket Server for Confluence** - Easily include code snippets in Confluence that sync automatically to Bitbucket Server.
- **Markdown Extension for Confluence** - Embed markdown from private and public Github & Bitbucket repositories in Confluence.

---

**Column Macro**

Used with the Section macro to define columns on a page. See *Working with page layouts and columns and sections*.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter name</th>
<th>Required</th>
<th>Default</th>
<th>Parameter description and accepted values</th>
</tr>
</thead>
<tbody>
<tr>
<td>width</td>
<td>No</td>
<td>100% of the page width, divided equally by the number of columns in the section.</td>
<td>The width of the column. Can be specified either in pixels (for example, 400px) or as a percentage of the available page width (for example, 50%).</td>
</tr>
</tbody>
</table>

---

Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** column

**Macro body:** Accepts rich text.

```markdown
{column:width=100px}
This is the content of *column 1*.
{column}
```

---

**Content by Label Macro**
The Content by Label macro is used to display lists of pages, blog posts or attachments that have particular labels. It's great for collecting related pages together and filtering out content that you don't want to see.

For example, you could use this macro to display a list of all pages that have the label 'feature-shipped' and include the word 'Blueprint', or to list any pages with the label 'meeting-notes' that you've been mentioned in.

Here's how the macro looks on your page:

And here's how you would set it up in the macro browser:

Using the Content by Label Macro

To add the Content by Label macro to a page:

1. From the editor toolbar, choose Insert
   > Other Macros
2. Find and select the required macro

**Speed it up with autocomplete:** Type { and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.
To edit an existing macro: Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.

CQL filters

CQL (Confluence Query Language) is a query language developed for Confluence, which you can use in some macros and the Confluence search. Confluence search and CQL-powered macros allow you to add filters to build up a search query, adding as many filters as you need to narrow down the search results.

Use the Add a filter link to add more filters to your query.

- Use AND, OR, and NOT operators
  - For an OR search, specify multiple values in the same field.
    So to show pages with 'label-a', 'label-b' or both you’d put 'label-a' and 'label-b' in the same Label field, like this:

  ![Label filter example]

  - For an AND search, add more than one filter and specify a single value in each.
    To show only pages with label-a and label-b you’d put 'label-a' in one label field, then add a second Label field to the macro, and put 'label-b' in the second one, like this:

  ![Label filter example]

  Put simply, OR values are entered in the same filter, AND values are entered in different filter. Only some filters support AND. If the filter doesn't support the AND operator, you won’t be able to add that filter more than once.

  - For a NOT search, enter a minus sign (-) before the label. This'll exclude everything with that label.

You can use the following CQL filters to build your query:

<table>
<thead>
<tr>
<th>Filter</th>
<th>Description</th>
<th>Operators</th>
</tr>
</thead>
<tbody>
<tr>
<td>Label*</td>
<td>Include pages, blog posts or attachments with these labels.</td>
<td>OR (multiple values in the same filter) AND (multiple Label filters)</td>
</tr>
<tr>
<td>Parameter</td>
<td>Default</td>
<td>Description</td>
</tr>
<tr>
<td>------------------------</td>
<td>---------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Sort by</td>
<td>Modified</td>
<td>Sort the list by title, the date it was created, or the date it was last modified. If you don't select an option, CQL default ordering by relevancy is used.</td>
</tr>
<tr>
<td>Reverse sort</td>
<td>False</td>
<td>Sort the list descending instead of ascending (Z - A, earliest - latest)</td>
</tr>
<tr>
<td>Maximum number of pages</td>
<td>15</td>
<td>Limit the number of items to include in the list. This can be any value up to 500 pages.</td>
</tr>
<tr>
<td>List title</td>
<td>Blank</td>
<td>Include an optional heading for the macro</td>
</tr>
<tr>
<td>Show labels for each page</td>
<td>True</td>
<td>Show or hide the labels applied to each item</td>
</tr>
</tbody>
</table>

**This field is required in CQL-powered macros.**

**You can add these filters in CQL-powered macros but in search they're part of the standard search filters, so they don't appear in the Add a filter menu.**
<table>
<thead>
<tr>
<th>Show space name for each page</th>
<th>True</th>
<th>Show or hide the space name for each item</th>
</tr>
</thead>
<tbody>
<tr>
<td>Display excerpts</td>
<td>False</td>
<td>Allows you to include a short excerpt under each page in the list. Choose between:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <strong>None</strong> - no excerpt will be displayed.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <strong>Simple</strong> - displays the first line of text contained in an Excerpt macro any of the returned pages. If there is not an Excerpt macro on the page, nothing will be shown.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <strong>Rich content</strong> - displays the contents of an Excerpt macro, or if there is not an Excerpt macro on the page, the first part of the page content, as formatted text, including images and some macros.</td>
</tr>
</tbody>
</table>

**Content by User Macro**

The Content by User macro generates a tabulated list of the content items, throughout the Confluence installation, that have been created by a specified Confluence user. The list includes all current pages, comments and spaces created by the user. Each item in the table is linked to its corresponding page, page comment or space dashboard.

Note that items for page comments contain a link to the page, followed by a second link to the comment itself, with these separated by a greater-than sign (>).

**Using the Content by User macro**

**To add the Content by User macro to a page:**

1. From the editor toolbar, choose **Insert**
   - > **Other Macros**
2. Find and select the required macro

**Speed it up with autocomplete:** Type `{ and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.

![Macro suggestions](image)

**To edit an existing macro:** Click the macro placeholder and choose **Edit**. This will open the macro details, so you can edit the macro parameters.

![Edit Remove](image)
Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Required</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Username</td>
<td>yes</td>
<td>none</td>
<td>The Confluence username for a person who has created content. Parameter is unnamed in wikimarkup.</td>
</tr>
<tr>
<td>(name)</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** content-by-user

**Macro body:** None.

```wiki
{content-by-user:jsmith}
```

Content Report Table Macro

The Content Report Table macro displays a set of pages and blog posts in tabular format, based on the labels specified in the macro parameters.

A working example

Below is a working example of the Content Report Table macro, displaying content with the label 'LDAP'.

<table>
<thead>
<tr>
<th>Title</th>
<th>Creator</th>
<th>Modified</th>
</tr>
</thead>
<tbody>
<tr>
<td>Managing Multiple Directories</td>
<td>Sarah Maddox [Atlassian]</td>
<td>Jan 18, 2019</td>
</tr>
<tr>
<td>Connecting to an LDAP Directory</td>
<td>Sarah Maddox [Atlassian]</td>
<td>Jan 18, 2019</td>
</tr>
<tr>
<td>Configuring User Directories</td>
<td>Sarah Maddox [Atlassian]</td>
<td>Jan 18, 2019</td>
</tr>
<tr>
<td>Synchronizing Data from External Directories</td>
<td>Sarah Maddox [Atlassian]</td>
<td>Dec 04, 2018</td>
</tr>
<tr>
<td>User Management Limitations and Recommendations</td>
<td>Sarah Maddox [Atlassian]</td>
<td>Sep 04, 2018</td>
</tr>
<tr>
<td>Connecting to LDAP or Jira applications or Other Services via SSL</td>
<td>Nick Faiz</td>
<td>Dec 12, 2017</td>
</tr>
<tr>
<td>Requesting Support for External User Management</td>
<td>Matt Ryall</td>
<td>Dec 12, 2017</td>
</tr>
<tr>
<td>Diagrams of Possible Configurations for User Management</td>
<td>Sarah Maddox [Atlassian]</td>
<td>Dec 12, 2017</td>
</tr>
<tr>
<td>Configuring the LDAP</td>
<td>Sarah Maddox [Atlassian]</td>
<td>Sep 26, 2017</td>
</tr>
</tbody>
</table>
Using the Content Report Table Macro

To add the Content Report Table macro to a page:

1. From the editor toolbar, choose Insert
   > Other Macros
2. Find and select the required macro

Speed it up with autocomplete: Type `{` and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.

![Macro suggestions]

To edit an existing macro: Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.

![Edit button]

Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Required</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Label(s) (labels)</td>
<td>Yes</td>
<td>None</td>
<td>This parameter is required. Specify one or more labels, separated by a comma. The macro will display the content tagged with any of the label(s) specified here. For example, if you specify labels 'A' and 'B', the macro will display all pages that have the label 'A', and all pages that have the label 'B', and all pages that have both those labels.</td>
</tr>
</tbody>
</table>
**Space(s) (spaces)**

No

(All spaces)

Specify one or more space keys, separated by a comma or a space. The macro will display only the content which belongs to the space(s) specified here.

When specifying a personal space, remember to use the tilde (~) sign in front of the username, such as ~jbloggs or ~jbloggs@example.com.

**Maximum Number of Pages (maxResults)**

No

20

Define the maximum number of pages that the macro will show in a single set of results. If there are more pages to be shown, the macro will display a link labeled 'Find more results'. People viewing the page can choose the link to go to a search view, which shows all pages tagged with the specified label(s).

Which pages will appear? Before displaying the results, Confluence will sort them by the date the page was last modified. The most-recently created/updated pages will appear first.

---

**Wiki markup**

Wiki markup is not available for this macro. You cannot add this macro via wiki markup.

**Contributors Macro**

The Contributors macro displays a list of Confluence users who have made a contribution of some type to a page. It can also be used to list watchers of the page.

The scope of this macro can be extended to include the immediate children or descendants of the specified page. The list of contributors can be based on people who have:

- authored or edited the page(s)
- contributed comments or added labels to the page(s), or
- are simply watching the page(s).

*Screenshot: Example list of Contributors*
In this example, the **Display Format** parameter has been set to **list**.

### Using the Contributors Macro

**To add the Contributors macro to a page:**

1. From the editor toolbar, choose **Insert**
   
   > Other Macros

2. Find and select the required macro

**Speed it up with autocomplete:** Type `{` and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.

![Cheese macro suggestions]

**To edit an existing macro:** Click the macro placeholder and choose **Edit**. This will open the macro details, so you can edit the macro parameters.

![Cheese macro editor]

### Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
| Contribution Type (include) | authors | Filters by either the type of contribution made to a page (and optionally its descendant pages), or the watches on the page. Contribution types are:
- authors - includes people who created or have edited the page(s)
- comments - includes people who have added comments to the page(s)
- labels - includes people who have added labels to the page(s)
- watches - includes people who are watching the page(s).
You can specify one or more contribution types, separated by commas.
| Sort By (order) | count | Specifies the criteria used to sort contributors. Sort criteria are:
- count - sorts people based on the total number of contributions to the page(s)
- name - sorts people into alphabetical order
- update - sorts people based on the date of their last contribution to the page(s).
| Reverse Sort (reverse) | false | Reverses the sort order of contributors in the list. Must be used in conjunction with the Sort By parameter.
| Maximum Number of Contributors (limit) | no limit | Limits the number of contributors in the list. If a number is not specified, all contributors are included.
| Display Format (mode) | inline | Sets how the list of contributor’s names is formatted:
- inline — a comma-separated list
- list — a bullet list.
| Show Anonymous Contributions? (showAnonymous) | false | Sets whether to include those who contributed anonymously to a page.
| Show Count? (showCount) | false | Sets whether to show the number of times each person made a contribution of the specified Contribution Type. |
| **Show Last Contribution Time?** (showLastTime) | false | Sets whether to show the last time each person made a contribution of the specified **Contribution Type.** |
| **Page Name** (page) | current | Specifies the page to use when generating the list of contributors. If **Page Name** and **Space(s)** are left blank, the current page is assumed. |
| **Label(s)** (labels) | none | Filters the list of contributors to those who created the specified labels from a page. You can specify one or more labels, separated by commas. |
| **Space(s)** (spaces) | current | Specifies the space key of the Confluence space that contains the page set in **Page Name** or alternatively, specifies the spaces to search. Space keys are case-sensitive. This parameter also takes special values, including:
- @global — All site spaces.
- @personal — All personal spaces.
- @all — All spaces in your Confluence site.
You can specify one or more space keys or special values, separated by commas.
If no **Page Name** and **Label(s)** are specified, all pages from the specified set of spaces are included. |
| **Content Type** (contentType) | both pages and blog posts | Restricts the content type to use when generating the list of contributors:
- pages — pages
- blogposts — blog posts. |
| **Blog Post Date** (publishDate) | none | Specifies the publish date for a blog post. The date format required is: YYYY/MM/DD. |
| **Include Page Hierarchy** (scope) | specified page only | Specifies additional pages to include when generating the list of contributors:
- children — just the child pages of the specified page
- descendants — all descendants of the specified page. |
### Show Selected Pages (showPages)
- **false**
  - Sets whether to show a list of the pages used to generate the list of contributors.

### Custom "None Found" Message (noneFoundMessage)
- **default message**
  - Specifies the message to be used to override the default message that is displayed when no contributors are found.

---

**Wiki markup example**

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** contributors

**Macro body:** None.

This example specifies a content type of blog posts:

```
{contributors:limit=10|spaces=ds,@personal|reverse=true|labels=chocolate,cake|showPages=true|noneFoundMessage=Oh dear, no contributors found|showCount=true|contentType=blogposts|include=authors,comments,labels,watches|mode=list|showAnonymous=true|order=update|showLastTime=true|publishDate=2012/06/30}
```

This example specifies a content type of pages:

```
{contributors:limit=10|spaces=ds,@personal|reverse=true|scope=descendants|labels=chocolate,cake|showPages=true|noneFoundMessage=Oh dear, no contributors found|showCount=true|contentType=pages|include=authors,comments,labels,watches|mode=list|showAnonymous=true|order=update|page=ds:Advanced Topics|showLastTime=true}
```

---

**Contributors Summary Macro**

The Contributors Summary macro displays a table of contribution-based statistics for a set of pages. These statistics can be grouped according to individual pages or individual contributors.

The default scope for this macro is an individual page, but this can be extended to include the immediate children or descendants of a specified page. The statistics cover the following types of contributions:

- edits to the page(s)
- comments added to the page(s)
- labels added to the page(s)
- people watching the page(s)

A simple example of the Contributors Summary macro is shown in the screenshot below. It lists statistics for the number of times each contributor has edited, added comments and added labels to this page.

**Screenshot: Example Contributors Summary table of statistics**
Using the Contributors Summary Macro

To add the Contributors Summary macro to a page:

1. From the editor toolbar, choose Insert
   + 
   > Other Macros
2. Find and select the required macro

Speed it up with autocomplete: Type `{ and the beginning of the macro name, to see a list of suggested macros. In this example we’re inserting the cheese macro.

To edit an existing macro: Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.

Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Group By</strong></td>
<td>contributors</td>
<td>Specifies the basis for grouping contribution-based statistics:</td>
</tr>
<tr>
<td>(groupby)</td>
<td></td>
<td>• contributors — group by the people who have contributed</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• pages — group by the pages used to find contributors.</td>
</tr>
<tr>
<td>Columns to Display (columns)</td>
<td>edits, comments, labels</td>
<td>Sets the columns that should appear in the table. The statistics or type of information presented depends on the basis for grouping set with the <strong>Group By</strong> parameter. Statistics may be calculated for:</td>
</tr>
<tr>
<td>-----------------------------</td>
<td>------------------------</td>
<td>------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- <em>edits</em> — the number of times each contributor has edited the page(s) or the number of edits made to each page.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- <em>edited</em> — a list of the pages edited by each contributor or a list of contributors who have edited each page.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- <em>comments</em> — the number of times each contributor has added comments to the page(s) or the number of comments on each page.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- <em>commented</em> — a list of pages to which each contributor has added comments or a list of contributors who have commented on each page.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- <em>labels</em> — the number of times each contributor has added labels to the page(s) or the number of labels on each page.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- <em>labeled</em> — a list of pages to which each contributor has added labels or a list of contributors who have added a label to each page.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- <em>labellist</em> — a list of labels either added by each contributor or on each page.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- <em>watches</em> — the number of pages being watched by each contributor/person or the number of contributors/people watching each page.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- <em>watching</em> — a list of pages being watched by each contributor/person or a list of contributors/people watching each page.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- <em>lastupdate</em> — the last time each contributor made an update or when each page was last updated. Valid updates can include edit, comment or label modifications to a page.</td>
</tr>
</tbody>
</table>

One or more columns can be used.
| **Sort By (order)** | edits | Sets the criterion used for sorting items in the table. The items sorted depend on the basis for grouping set with the **Group By** parameter. Sort criteria are:
|                     |       | - **edits** — sorts items in the table based on the total number of edits made, either by a contributor or to a page.
|                     |       | - **name** — sorts items in the table in alphabetical order, either by contributor or page name.
|                     |       | - **editTime** — sorts items in the table based on when the contributor last edited a page (or a specified set of pages) or when the page was last edited.
|                     |       | - **update** — sorts items in the table based on when the contributor last made any contribution to a page (or a specified set of pages) or when the page last had any contribution made to it.
| **Reverse Sort (reverse)** | false | Reverses the sort order of items in the table, as specified using the **Sort By** parameter. (Used only in conjunction with the **Sort By** parameter.)
| **Maximum Number of Items (limit)** | no limit | Limits the number of contributors or pages in the table to the value specified. If no number is specified, all items are included.
| **Show Anonymous Contributions? (showAnonymous)** | false | Includes individuals who have made anonymous contributions to a page.
| **Show Zero Counts? (showZeroCounts)** | false | Sets whether contributors or pages are included for which a calculated statistic is zero.
| **Page Name (page)** | current | Sets the page for which to calculate the contribution-based statistics. If no values for **Page Name** and **Space(s)** are specified, the current page is assumed.
| **Label(s) (labels)** | none | Restricts the contribution-based statistics to the specified labels only. You can specify one or more labels, separated by commas.
**Space(s)** (spaces) | current | Specifies the space key of the Confluence space which contains the specified page name or alternatively, specifies a scope of spaces to search. Space keys are case-sensitive.

This parameter also takes special values, including:

- `@global` — All site spaces.
- `@personal` — All personal spaces.
- `@all` — All spaces in your Confluence site.

You can specify one or more space keys or special values, separated by commas.

If no **Page Name** and **Label(s)** are specified, all pages from the specified set of spaces are included.

**Content Type** (contentType) | both pages and blog posts | Restricts page types to either pages (pages) or blog posts (blogposts). If no value is specified in the Macro Browser, both pages and blog posts are included.

Available values pages and blog posts.

**Blog Post Date** (publishDate) | none | Specifies the publish date for a blog post. The date format required is: YYYY/MM/DD.

**Include Page Hierarchy** (scope) | specified page only | Includes either the immediate children or all descendants of the specified page. If no value is indicated in the Macro Browser, only the specified page is included.

---

**Wiki markup example**

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** contributors-summary

**Macro body:** None.

This example specifies a content type of blog posts:

```plaintext
{contributors-summary:limit=10|spaces=ds,@personal|reverse=true|showAnonymous=true|order=update|labels=chocolate,cake|columns=edits,comments,labels,lastupdate|groupby=pages|contentType=blogposts|showZeroCounts=true|publishDate=2012/06/07}
```
This example specifies a content type of pages:

```{contributors-summary:limit=10|spaces=ds,@personal|reverse=true|showAnonymous=true|scope=descendants|order=update|page=ds:Advanced Topics|labels=chocolate,cake|columns=edits,comments,labels,lastupdate|groupBy=pages|contentType=pages|showZeroCounts=true}
```

Create from Template Macro

The Create from Template macro displays a button on a page, linked to a specific template. When someone clicks the button, the macro opens the editor, ready to add a new page, and adds content to the page based on the given template.

When adding the macro to the page, you can specify a blueprint or a user-created template in the macro. You will also specify the name of the button displayed, and the space in which the new page will appear.

Example

**Screenshot: A page with three buttons, all displayed by the 'Create from Template' macro**

Using the Create from Template Macro

**To add the Create from Template macro to a page:**

1. From the editor toolbar, choose **Insert**
   ```plaintext
   > Other Macros
   ```
2. Find and select the required macro

**Speed it up with autocomplete:** Type `{ and the beginning of the macro name, to see a list of suggested macros. In this example we’re inserting the cheese macro.

**To edit an existing macro:** Click the macro placeholder and choose **Edit**. This will open the macro details, so you can edit the macro parameters.

Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the
parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Required</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Button Text</td>
<td></td>
<td>'Create from Template'</td>
<td>The description that people will see when viewing this macro on the page.</td>
</tr>
<tr>
<td>Template Name</td>
<td></td>
<td>None</td>
<td>Select the template or blueprint to base the new page on. Only global and user-created templates for the current space appear (unless you have specified a different space in the 'Space Key' field).</td>
</tr>
<tr>
<td>Template Title</td>
<td></td>
<td>Blank</td>
<td>Specify a default title for pages created using this macro (optional). You can include @currentDate, @spaceName and @spaceKey variables in the title.</td>
</tr>
<tr>
<td>Space Key</td>
<td></td>
<td>The space where the current page is located</td>
<td>Supply the unique space identifier (space key), to determine where the new page will be created when someone uses this macro to create a page.</td>
</tr>
</tbody>
</table>

Wiki markup

Wiki markup is not available for this macro. You cannot add this macro via wiki markup.

Create Space Button Macro

The Create Space Button macro displays a create space icon that links to the 'Create Space' page. To see this icon, viewers need the 'Create Space' permission which is assigned by a site administrator.

Using the Create Space Button macro

To add the Create Space Button macro to a page:

1. From the editor toolbar, choose Insert
   
   > Other Macros

2. Find and select the required macro

Speed it up with autocomplete: Type { and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.
To edit an existing macro: Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.

Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Icon Size</td>
<td>large</td>
<td>Specify whether to use large or small icon.</td>
</tr>
<tr>
<td>size</td>
<td></td>
<td>Available values:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- large</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- small</td>
</tr>
</tbody>
</table>

Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** create-space-button

**Macro body:** None.

```
{create-space-button:size=small}
{create-space-button:height=50px|width=50px}
```

The following additional parameters are available in wiki markup. See all parameters...

<table>
<thead>
<tr>
<th>Parameter name</th>
<th>Required</th>
<th>Default</th>
<th>Parameter description and accepted values</th>
</tr>
</thead>
<tbody>
<tr>
<td>width</td>
<td>No</td>
<td>Natural size of icon (1:1 pixel ratio)</td>
<td>The width of the icon to be displayed, specified in pixels. Confluence will stretch or shrink the width of the icon to the number of pixels specified. Note: This parameter is not available via the macro browser.</td>
</tr>
</tbody>
</table>
### Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
</table>
| Page Containing the Excerpt (default-parameter) | none    | Type the name of the page that contains the excerpt to be displayed. You can use an excerpt from a page in the same space or another space in the same wiki. When you type the name of the page into the Excerpt Include macro dialog, Confluence will offer a list of matching pages, including those from other spaces. Alternatively, you can type the space key followed by a colon (:) and the page name, like this: SPACEKEY:Page name  
This parameter is unnamed in wikimarkup. |
| Remove Surrounding Panel (nopanel)            | false   | Determines whether Confluence will display a panel around the excerpted content. The panel includes the title of the page containing the excerpt, and the border of the panel. By default, the panel and title are shown. |

**Wiki markup example**

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** excerpt-include

**Macro body:** None.

```
{excerpt-include:My page name|nopanel=true}
```

**Excerpt Macro**

The Excerpt macro is used to mark a part of a page's content for re-use. Defining an excerpt enables other macros, such as the Excerpt Include and Blog Posts macros, to display the marked content elsewhere.

You can only define one excerpt per page. In other words, you can only add the Excerpt macro once to a page.

**Using the Excerpt Macro**

**To add the Excerpt macro to a page:**

1. From the editor toolbar, choose Insert + > Other Macros
2. Find and select the required macro

**Speed it up with autocomplete:** Type `{` and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.

![Macro suggestions]

**To edit an existing macro:** Click the macro placeholder and choose **Edit**. This will open the macro details, so you can edit the macro parameters.

![Cheese]

**To add reusable content to the macro:**

1. Add your content inside the Excerpt macro placeholder.
2. Choose the macro placeholder to see the options panel, and select the option to **Display on new line** or to **Display inline**. The default is to display the content of the macro on a new line. If you choose the inline option, the content of the macro will form part of the same paragraph as the text preceding and following it. Note that this option affects only the page that contains the Excerpt macro. It does not affect any pages where the content is reused.

![Screenshot: The Excerpt macro placeholder and options panel]

1. **New line**
2. **Inline**

**Parameters**

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (**example**).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
</table>

*Created in 2019 by Atlassian. Licensed under a [Creative Commons Attribution 2.5 Australia License](https://creativecommons.org/licenses/by/2.5/).*
| Hide Excerpted Content (hidden) | false | Controls whether the page content contained in the Excerpt macro placeholder is displayed on the page. Note that this option affects only the page that contains the Excerpt macro. It does not affect any pages where the content is reused. |

**Wiki markup example**

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** excerpt

**Macro body:** Accepts rich text.

```
{excerpt:hidden=true|atlassian-macro-output-type=BLOCK}
This is the *text* I want to reuse in other pages. This text is inside an Excerpt macro.
{excerpt}
```

**Expand Macro**

The Expand macro displays an expandable/collapsible section of text on your page.

Here is an example:

> Expand me...

This text is hidden until you expand the section.

**Using the Expand Macro**

**To insert the Expand macro into a page using the macro browser:**

1. From the editor toolbar, choose Insert
   + Other Macros
2. Find and select the required macro

**Speed it up with autocomplete:** Type `{ and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.

**To edit an existing macro:** Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.
Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Title</td>
<td>Click here to expand...</td>
<td>Defines the text that appears next to the expand/collapse icon.</td>
</tr>
</tbody>
</table>

Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** expand

**Macro body:** Accepts rich text.

```wiki
{expand:This is my message}
This text is _hidden_ until you expand it.
{expand}
```

Notes

- **Text is expanded in PDF and HTML exports.** When you export the page to PDF or HTML, the text between the macro tags is expanded so that readers can see it in the PDF and HTML versions of the page.
- **Nesting your Expand macros.** You can put one Expand macro inside another, and Confluence will correctly show and hide the contents of all Expand macros, including the nested ones.

Do more with Confluence

Extend Confluence with one of the hundreds of other macros in the Atlassian Marketplace, such as:

- **Composition Tabs & Page Layouts:** Toggle or expand the visible of portions of your pages with the Toggle and Cloak macro
- **Content Formatting for Confluence:** Over 30 easy-to-use Confluence macros gives you the ability to create better, more engaging content

Favorite Pages Macro

Use the Favorite Pages macro to list the pages you've saved for later on a Confluence page. You can also get to your saved pages from the Dashboard.

*Screenshot: The Favorite Pages Macro in Confluence*

This is the Favourite Pages macro

**Favourite Pages**

Displaying pages recently added to your favourites list.

- Why I loved Angry Nerds (Angry Nerds)
- Which nerd are you? (Angry Nerds)
- Our new logo (Angry Nerds)
Using the Favorite Pages Macro

To insert the favorite pages macro into a page using the Macro Browser:

1. From the editor toolbar, choose Insert
   > Other Macros
2. Find and select the required macro

Speed it up with autocomplete: Type { and the beginning of the macro name, to see a list of suggested macros. In this example we’re inserting the cheese macro.

To edit an existing macro: Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.

There are no parameters for this macro.

Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

Macro name: favpages

Macro body: None.

{favpages}

Gadget Macro

Gadgets are small applications that can offer dynamic content. They are typically served from a web application server and can be re-used in many other web applications. In Confluence, use the Gadget macro to add gadgets to pages or blog posts.

Confluence comes bundled with a few of its own gadgets that you can add to your pages or blog posts. However, you can access additional gadgets in this list if your Confluence Administrator has:

- Installed additional gadgets in Confluence (typically as a Confluence plugin) or
- Registered gadgets served from an external web application or website (such as those from a Jira application).

Unlike other macros, the name of each gadget macro is unique and follows the convention "<gadget-name> macro", where <gadget-name> is the name supplied by the gadget itself.

Inserting gadgets into a Confluence page or blog post

To add a gadget to a page:

1. Edit your page or blog post.
2. Choose Insert > Other Macros.
3. Click External Content to see a list of gadgets configured for use in your Confluence installation.
   (Some Confluence macros like the Jira Issues, RSS Feed, and Widget Connector macros also appear in this category because they can also access external content.)
4. Click the desired gadget to access its parameters and properties. Almost all gadgets allow you to set basic parameters (listed below), which appear in the macro dialog. Some gadgets also have their own set of parameters, that can only be set in the gadget itself. You can use the preview in the macro browser to access them.

5. Set the parameters to your requirements.
6. Click **Refresh** to preview your changes.
7. Click **Insert** to add the gadget to the page.

**Editing gadgets on a Confluence page or blog post**

**To edit an existing gadget on a page or blog post:**

1. Edit your page or blog post.
2. Click the Gadget macro placeholder and choose **Edit** (or double-click the placeholder).
3. Set the gadget's parameters to your requirements.
4. Click **Refresh** to preview your changes.
5. **Save** the gadget.

**Standard gadget parameters**

Almost all gadgets allow you to set basic parameters (listed below), which appear on the right of the macro dialog. Each gadget may also have its own set of parameters, which appear on the left of the macro dialog.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
</table>
| **Width** | 450 pixels | Set the width of the gadget, using one of the following conventions:  
- Width in pixels, using `px` or plain numbers. For example, `500px` or `500`
- A percentage of the page width, using `%`. For example, `50%`
- Automatic resizing of the gadget to fit 100% of the page width: `auto`
| **Border** | true | Places a thin grey border around the gadget. |

**Contents of a Gadget macro**

In the addition to the standard parameters, the gadget macro contains 'parameter-like' content, which represents specific property settings that are particular to each gadget. Hence they are not documented here. Typically, this content would only be changed by customizing the gadget's default properties using the macro browser.

**Wiki markup example**

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** gadget

**Macro body:** None.

This example shows the Confluence Page gadget:
This example shows the Confluence News gadget:

```
{gadget:url=rest/gadgets/1.0/g/com.atlassian.confluence.plugins.gadgets:confluence-news-gadget/gadgets/confluence-news-gadget.xml} {gadget}
```

The following additional parameters are available in wiki markup.

See additional parameters...

<table>
<thead>
<tr>
<th>Parameter name</th>
<th>Required</th>
<th>Default</th>
<th>Parameter description and accepted values</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>Yes</td>
<td>(none)</td>
<td>This is the location of the gadget specification (XML file).</td>
</tr>
<tr>
<td>preferences</td>
<td>No</td>
<td>(Gadget-dependent)</td>
<td>Specific property settings that are particular to each gadget.</td>
</tr>
</tbody>
</table>

A note about editing a gadget's properties (preferences) in markup: It is possible to edit the values of these properties directly in the wiki markup or storage format. However, this will allow the entry of invalid values. If a gadget property supports a certain set of values, the macro browser will restrict the user to selecting only valid values for that property. For that reason, we recommend that you use the macro browser to edit a gadget's properties.

**Gallery Macro**

The Gallery macro displays a collection of thumbnail images in a table, based on the images attached to a Confluence page. When viewing the page, a user can click a thumbnail image to zoom into a screen-sized image and then view the images as a slide show.

**Overview:**

- The images shown in the gallery are taken from the files attached to the Confluence page. You can also specify a different page where the attachments are located. For information about attaching images to a page, see [Upload Files](#).
- The captions below the images are drawn from the comments on the attachments. For information about adding comments to attachments, see [Upload Files](#).
- By default, the gallery will include all the images attached to the page. You can also exclude or include images using parameters.
- You can sort your images into a particular order.
- You can specify a title for the gallery and also configure how many columns you want for the table in which your images are displayed.

**Illustration: Live example of the Gallery macro**

Some office photos, and a waterfall
Using the Gallery macro

To insert the Gallery macro onto a page:

1. From the editor toolbar, choose Insert
   
   > Other Macros

2. Find and select the required macro

Speed it up with autocomplete: Type {} and the beginning of the macro name, to see a list of suggested macros. In this example we’re inserting the cheese macro.
To edit an existing macro: Click the macro placeholder and choose **Edit**. This will open the macro details, so you can edit the macro parameters.

### Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

The full list of parameters is shown in the following table. If the name of an attached file or page contains a comma, you can refer to it in the relevant parameters below by enclosing it in single or double quotes, for example "this,that.jpg", theother.png

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gallery Title (<code>title</code>)</td>
<td>Nothing</td>
<td>Specify a title for your gallery.</td>
</tr>
<tr>
<td>Number of Columns (<code>columns</code>)</td>
<td>4</td>
<td>Specify the number of columns for your table.</td>
</tr>
<tr>
<td>Images to Exclude (<code>exclude</code>)</td>
<td>No exclusions. Include all the pictures on the page.</td>
<td>The gallery will ignore any pictures specified. You can specify more than one picture, separated by commas. Note: The filename and filetype for this parameter are case-sensitive. For example, 'my picture.PNG' will not be recognized as 'my picture.png'.</td>
</tr>
<tr>
<td>Include these Images Only (<code>include</code>)</td>
<td>Include all the pictures on the page.</td>
<td>If you specifically include one or more pictures, the gallery will show only those pictures. You can specify more than one picture, separated by commas. Note: The filename and filetype for this parameter are case-sensitive. For example, 'my picture.PNG' will not be recognized as 'my picture.png'.</td>
</tr>
<tr>
<td>Exclude Images with these Labels (<code>excludeLabel</code>)</td>
<td>No exclusions. Include all the pictures on the page.</td>
<td>The gallery will ignore any pictures that have the specified label. You can specify more than one label, separated by commas. For information on labeling the attachments, see Add, Remove and Search for Labels.</td>
</tr>
<tr>
<td>Feature</td>
<td>Description</td>
<td>Example</td>
</tr>
<tr>
<td>---------------------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Include Images with these Labels Only (includeLabel)</td>
<td>Filters the images to display, based on a list of labels. If you wish to enter more than one label, separate the labels with commas. Confluence will show only images that have <strong>all</strong> the labels specified. (The match is an AND, not an OR.) For information on labeling the attachments, see Add, Remove and Search for Labels.</td>
<td></td>
</tr>
<tr>
<td>Use Images in these Pages (page)</td>
<td>Specify the title of the page which contains the images you want displayed. You can specify more than one page name, separated by commas. To specify a page in a different space, use the following syntax: <code>SPACEKEY:Page Title</code></td>
<td></td>
</tr>
<tr>
<td>Sort Images By (sort)</td>
<td>Specify an attribute to sort the images by. Sort order is ascending, unless you select the <strong>Reverse Sort</strong> parameter (see below). Options are:</td>
<td></td>
</tr>
<tr>
<td>Reverse Sort (reverse)</td>
<td>Used in combination with the <strong>Sort Images By</strong> parameter above. Use <strong>Reverse Sort</strong> to reverse the sort order, from ascending to descending. Available values in storage format and wikimarkup:</td>
<td></td>
</tr>
</tbody>
</table>

**Image file formats**

You can attach image files of any format to a page. Confluence supports the following image formats in the Gallery macro and when displaying an image on a page:

- `.gif`
- `.jpeg`
- `.png`
- `.bmp` (depending on browser support)

**Wiki markup example**

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.
Macro name: gallery
Macro body: None.

```{gallery:title=My holiday pictures|reverse=true|sort=size|page=My page1, ds:Welcome to Confluence|excludeLabel=badlabel1, badlabel2|columns=3|exclude=badpicture.png}

Global Reports Macro

The Global Reports macro displays a list of links to some reports about content on your site.

These reports include a list of new or updated pages, orphan pages, undefined pages, and RSS feeds for new pages and blog posts.

Screenshot: The Global Reports macro

Using the Global Reports Macro

To add the Global Reports macro to a page:

1. From the editor toolbar, choose Insert
   +
   > Other Macros

2. Find and select the required macro

Speed it up with autocomplete: Type `{ and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.

To edit an existing macro: Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.

Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
</table>

Created in 2019 by Atlassian. Licensed under a Creative Commons Attribution 2.5 Australia License.
| Width of Table | 99% | Specify the width of the table in which the links are displayed, as a percentage of the window width. |

Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** global-reports

**Macro body:** None.

```
{global-reports:width=50%}
```

**HTML Include Macro**

The HTML Include macro allows you to include the contents of an external HTML file (a webpage) in a Confluence page.

**HTML macros are disabled by default**
The HTML macro will only be available if it has been enabled by an administrator. Enabling these macros can make your Confluence site vulnerable to cross-site scripting attacks.

**Using the HTML Include Macro**

**To insert the HTML Include macro into a page:**

1. From the editor toolbar, choose Insert
   - +
   - Other Macros
2. Find and select the required macro

**Speed it up with autocomplete:** Type `{ and the beginning of the macro name, to see a list of suggested macros. In this example we’re inserting the cheese macro.

**To edit an existing macro:** Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.

**Parameters**

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Required</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>HTML Page's URL (url)</td>
<td>Yes</td>
<td>None</td>
<td>The URL of the page to include.</td>
</tr>
<tr>
<td>-----------------------</td>
<td>-----</td>
<td>------</td>
<td>-------------------------------</td>
</tr>
</tbody>
</table>

### Enabling the HTML Include Macro

The HTML Include macro is disabled by default. You'll need Confluence Administrator or System Administrator permissions to enable this macro.

**⚠️** Enabling these macros can make your Confluence site vulnerable to cross-site scripting attacks. You should only turn on these macros if you trust all your users not to attempt to exploit them. We strongly recommend leaving this macro disabled if you allow self-signed up or anonymous users to create content.

**To enable the HTML Include macro:**

1. Go to > Manage apps
2. Select **System** from the drop down and search for the Confluence HTML Macros system app.
3. Expand the listing and enable the `html-include (html-include-xhtml)` module.

Administrators can also choose to use the `whitelist` to restrict URLs that can be displayed in the HTML Include macro.

### Troubleshooting

- **Administrators** can define a **whitelist of trusted URLs**. If a URL is not in the whitelist, you will see an error message in the HTML Include macro.
- **You can only use the HTML Include macro for pages with absolute links.** If you use the macro to include an HTML page that has relative links, you will see a 'Page Not Found' error. See [CONFSERVER-6567 - HTML Include macro should rewrite relative links to point to remote site](https://confluence-qa.atlassian.com/browse/CONFSERVER-6567) .

### Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** `html-include`  
**Macro body:** None.

```html
{html-include:url=http://www.example.com}
```

### HTML Macro

The HTML macro allows you to add HTML code to a Confluence page.

**HTML macros are disabled by default**  
The HTML macro will only be available if it has been enabled by an administrator. Enabling these macros can make your Confluence site vulnerable to cross-site scripting attacks.

### Using the HTML Macro

**To add the HTML macro to a page:**

1. From the editor toolbar, choose **Insert**
> Other Macros

2. Find and select the required macro

**Speed it up with autocomplete:** Type `{` and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.

To edit an existing macro: Click the macro placeholder and choose **Edit**. This will open the macro details, so you can edit the macro parameters.

There are no parameters for this macro.

Enter the HTML code into the body of the macro placeholder.

**Enabling the HTML Macro**

The HTML macro is disabled by default. You’ll need Confluence Administrator or System Administrator permissions to enable this macro.

⚠️ Enabling these macros can make your Confluence site vulnerable to cross-site scripting attacks. You should only turn on these macros if you trust all your users not to attempt to exploit them. We strongly recommend leaving this macro disabled if you allow self-signed up or anonymous users to create content.

**To enable the HTML macro:**

1. Go to
   - Manage apps.
2. Select **System** from the drop down and search for the **Confluence HTML Macros** system app.
3. Expand the listing and enable the **html (html-xhtml)** module.

**Wiki markup example**

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** html

**Macro body:** Text, consisting of HTML code.

```
{html}<a href="http://www.atlassian.com">Click here</a> to see the
<b>Atlassian</b> website.{html}
```

**IM Presence Macro**

The IM Presence macro indicates graphically when a contact is signed into an Instant Messaging (IM) service. The IM Presence macro appears as a small icon on the page.
Using the IM Presence Macro

To add the IM Presence macro to a page:

1. From the editor toolbar, choose **Insert** > **Other Macros**
2. Find and select the required macro

**Speed it up with autocomplete:** Type `{` and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.

![Macro suggestions](image)

**To edit an existing macro:** Click the macro placeholder and choose **Edit**. This will open the macro details, so you can edit the macro parameters.

![Edit Remove](image)

Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>User ID/Screen Name</td>
<td>Identify the user by their ID, account name or screen name.</td>
</tr>
<tr>
<td>Show User ID</td>
<td>Shows or hides the User ID of the contact.</td>
</tr>
</tbody>
</table>

**Wiki markup example**

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.
Macro name: im

Macro body: None.

{im:MySkypeName|service=skype|showid=false}

Include Page Macro

You can use the Include Page macro to display the contents of one Confluence page or blog post in another page or blog post. Any changes to the original page are automatically reflected wherever it is included.

Using the Include Page Macro

To add the Include Page macro to a page:
1. From the editor toolbar, choose Insert
   > Other Macros
2. Find and select the required macro

Speed it up with autocomplete: Type { and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.

To edit an existing macro: Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.

Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
</table>

| **Page to Include** | None | This is the name of the Confluence page or blog post that you want to include in the current page. Start typing a page title, and Confluence will suggest matching pages from the current space and other spaces. Alternatively you can specify the page as follows:
- If the page or blog post is located in another space, add the space key and a colon in front of the page name. For example, DOC:My page name. The space key is case sensitive.
- To include a blog post, specify the date as well as the title of the blog post. For example: /2010/12/01/My blog post.
- You can include pages from personal spaces using ~user name as the space key, where 'username' is the person's username. For example, ~jsmith:My page name. |

*Wiki markup example*

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** include

**Macro body:** None.

```
{include:DOC:My chocolate page}
```

*Notes*

- If you want to include part of a page rather than the whole page, use the Excerpt and Excerpt Include macros.
- To display a page’s contents, you need ‘View’ permission for that page. Similarly, people who view the page will need ‘View’ permissions for the embedded page as well as the page into which it is embedded. See space permissions or contact your Confluence space administrator for more information.
- If you want to embed an external page into a Confluence page, you need the HTML Include Macro.

*Sample Include Page*

Start of sample page content

Info, Tip, Note, and Warning Macros

The Info, Tip, Note, and Warning macros allow you to highlight information on a Confluence page. They create a colored box surrounding your text, like this:

To add an Info, Tip, Note, or Warning Macro to a page:

1. From the editor toolbar, choose Insert
   > Other Macros
2. Find and select the required macro

**Speed it up with autocomplete:** Type `{ and the beginning of the macro name, to see a list of suggested macros. In this example we’re inserting the cheese macro.

To edit an existing macro: Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.

### Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Optional Title (title)</td>
<td>none</td>
<td>The title of the box. If specified, the title text will be displayed in bold next to the icon.</td>
</tr>
<tr>
<td>Show Information/tip/Exclamation Mark/Warning Icon (icon)</td>
<td>true</td>
<td>If &quot;false&quot;, the icon will not be displayed.</td>
</tr>
</tbody>
</table>

**Wiki markup example**

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** info/tip/note/warning

**Macro body:** Accepts rich text.
Jira Chart Macro

If your Confluence site is connected to a Jira application, you can display issues as charts on Confluence pages. You can connect Confluence to any Jira application, including Jira Software and Jira Service Desk.

Before you can use this macro, your Confluence and Jira applications must be connected via Application Links. People viewing the page will see charts for publicly accessible issues. If your Jira application has restricted viewing (that is, people need permission to view issues) then they'll need to authenticate before seeing the charts. This macro is compatible with Jira 5.x and later.

Adding the Jira Chart macro to a page

To add a Jira chart to your page:

1. In the editor choose Insert > Other macros > Jira Chart.
2. Choose the type of report you want to create (for example Pie, Created vs Resolved)
3. Select your Jira server.
   If you have multiple Jira servers linked to Confluence the drop down will default to the primary application link.
4. Search for issues - you can enter the query in JQL or paste a Jira URL directly into the search field.
5. Choose Preview to generate the chart.
6. Choose Display Options to further control how your chart appears.
7. Choose Insert.

To find out more about searching for issues see Displaying issues using JIRA Query Language (JQL).

Screenshot: The Jira Chart Macro in the macro browser
Pie charts can be used to report on issue status, priority, assignee and more.

To further control how this chart appears on your page, choose **Display options**:

- **Chart by** - select the field you want to segment the pie chart by such as:
  - Status
  - Fix version
  - Assignee name
  - Priority
  - Component
  - Issue type
- **Width** - define the total width of the chart area. You can enter values in pixels, percent or leave blank to auto fit.
- **Show border** - add a border around the chart area.
- **Show chart information** - include a text summary under the chart with the total issues count and chart by value.

Created vs Resolved chart

Created vs Resolved charts can be used to show the difference between the number of issues created
versus the number of issues resolved over time.

To further control how this chart appears on your page choose **Display options**:

- **Period** - choose a time frame to report by (week, month, quarter etc).
- **Days previously** - the total number of days to report on (counting back from today).
- **Cumulative totals** - choose to progressively add totals or report individual values for each period.
- **Show unresolved trend** - add a subplot showing unresolved issues over time.
- **Show versions** - indicate version release dates as a vertical line on the chart.
- **Width** - define the total width of the chart area. Enter values in pixels, percent or leave blank to auto fit.
- **Show border** - add a border around the chart area
- **Show chart information** - include a text summary under the chart with the total issues count and chart by value.

![Chart Image](image)

**Two Dimensional Chart**

Two Dimensional Charts can be used to show issue statistics in a matrix. You can configure the X and Y axes to display these issue fields:

- Status
- Priority
- Assignee
- Fix version
- Component
- Issue type.

For example you could use the chart to show issue types by status (as shown above).

To configure the chart axes choose **Display options**:

- **X Axis** - the issue field to display on the X axis (columns).
- **Y Axis** - the issue field to display on the Y axis (rows).
- **Rows to display** - the maximum number to display in the chart.
Disabling the Jira Chart macro

The functionality is provided by a system app (plugin) called ‘Jira Macros’. This is also used for the Jira Issues macro. To make the macro unavailable on your site, you can disable the app. See Disabling and enabling apps.

Notes

HTTPS: The Jira Chart macro can access a Jira site running under SSL provided the Confluence server is configured to accept the Jira SSL certificate. See Connecting to LDAP or Jira applications or Other Services via SSL.

Authentication: If the query includes issues that require authentication (issues that are not visible to anonymous users in Jira), users will be prompted to authenticate to view charts on the Confluence page.

In order to search for issues in the macro browser you will need to authenticate.

Jira Issues Macro

If your Confluence site is connected to a Jira application, you can create and display Jira issues on Confluence pages. You can connect Confluence to any Jira application, including Jira Software and Jira Service Desk.

Before you can use this macro, your Confluence and Jira application must be connected via Application Links. People viewing the page will see the publicly accessible issues from the Jira site. If your Jira site has restricted viewing (that is, people need permission to view issues) then they will need to authenticate before seeing the restricted issues. See more about restricted Jira issues below.

What you can do with the Jira Issues macro

Using the Jira Issues macro, you can:

- Display a list of issues on your page, based on a JIRA Query Language (JQL) search, filter or URL.
- Display a single issue.
- Display a count of issues.
- Create new issues and display the issues on your page without leaving Confluence.

Adding and updating the Jira Issues macro – an overview

Quick guide to using the macro on a Confluence page:

1. From the editor toolbar, choose Insert
   > Other Macros
2. Find and select the required macro
**Speed it up with autocomplete:** Type `{` and the beginning of the macro name, to see a list of suggested macros. In this example we’re inserting the cheese macro.

![Macro suggestions](image)

**To edit an existing macro:** Click the macro placeholder and choose **Edit**. This will open the macro details, so you can edit the macro parameters.

![Cheese](image)  
**Edit Remove**

---

---

**Displaying issues via a Jira Query Language (JQL) search**

You can use the macro to display a table of issues on your page, based on the results of a search using JIRA Query Language (JQL).

JQL is a simple query language that is similar to SQL. A basic JQL query consists of a *field*, followed by an *operator* (such as = or >), followed by one or more *values* or *functions*.

**Examples:**

- The following query will find all issues in the ‘TEST’ project:

```
project = "TEST"
```

- The following query will find all issues in the ‘documentation’ component of the ‘CONF’ project:

```
project = CONF and component = documentation
```

For more information about JQL syntax, see [Advanced searching](link) in the Jira Software documentation.

To display a table of issues based on a JQL search:

1. Insert the Jira Issues macro onto your Confluence page, as described above.
2. Choose a Jira server next to the **Search** button.
3. If prompted, log in to the Jira server.
4. Enter the JQL query into the **Search** box.
5. Choose **Search**.
6. If you want to customize the display, choose **Display options** and adjust the columns and number of issues that will appear in your table of issues.
7. Choose **Insert**.

**Screenshot: Display options in the Jira Issues macro browser.**

**Displaying issues via a Jira URL**

You can paste any of the following Jira application URLs into the Jira Issues macro. Confluence will immediately convert the URL to a JQL search.

- Any URL for an issue search or filter.
- A URL for a single issue.
- The URL of the XML view of a search.

**Auto-convert:** You can paste URLs directly into the Confluence editor (without calling up the macro browser). Confluence will automatically convert the URL into a Jira Issues macro.

**Displaying a single issue, or selected issues**

To display a single Jira issue, choose one of the following methods:

- Paste the URL of the issue directly onto the Confluence page. (There is no need to use the macro browser.) Confluence will auto-convert the link to a Jira Issues macro.
- Or: Add the Jira issues macro to the page as described above, and choose **Recently Viewed** to see the issues you have visited recently. Select an issue and choose **Insert**.
- Or: Add the Jira issues macro to the page as described above, and paste the issue URL into the search box in the macro browser.
- Or: Add the Jira issues macro to the page, define your search criteria in the macro browser via JQL as described above, then select the check box next to the issue in the search results, within the macro browser.

You can choose to show just the issue key, or the issue key and a summary. Select the macro placeholder and choose Show Summary or Hide Summary.

To display a subset of Jira issues from your search results:

1. Add the Jira issues macro to the page.
2. Define your search criteria in the macro browser via JQL, as described above.
3. Select the check boxes next to the required issues in the search results, within the macro browser.

**Screenshot: Selecting a subset of issues to display**
Displaying a count of issues

You can choose to display the number of issues returned by your search, rather than a table of issues. The Jira Issues macro will display a count of issues, linked to the search in your Jira application.

Screenshot: The Jira Issues macro displaying an issue count on a Confluence page

To display an issue count:

1. Add the Jira Issues macro to the page.
2. Define your search criteria in the macro browser via JQL, as described above.
3. Choose Display options, then choose Total issue count next to 'Display options' in the macro browser.
4. Choose Insert.

Creating a new issue

While editing a Confluence page, you can create an issue in Jira and display it on your Confluence page, without leaving the Confluence editor.

To create an issue and add it to your page:

1. Add the Jira Issues macro to the page, as described above.
2. Choose Create New Issue.
3. Supply the information about your Jira server, project, and issue, as prompted.
4. Choose Insert.

Confluence will send a request to your Jira application, to create the issue, then display the newly created issue.
Limitations

The Jira Issues macro will notify you if it is unable to create an issue in the selected project. This may be because the project has a required field, field configuration or other customization that is not supported by the Jira Issues macro. In this situation you will need to create the issue directly in your Jira application.

Configuring application links to display restricted issues

Before you can use this macro, your Confluence and Jira sites must be connected via Application Links. If the Jira site allows anonymous users to view issues, you must configure an application link, but there’s no need to configure any incoming or outgoing authentication between the Jira application and Confluence. People viewing the Confluence page will see the publicly accessible issues.

If your Jira site has restricted viewing, or if some projects or issues are restricted to viewing by certain people, then people will be prompted to Log in & Approve before seeing the restricted issues.

Rendering HTML from Jira applications

Formatted fields from Jira can be displayed in Confluence if you set up a Confluence-to-Jira application link. Otherwise, such formatted fields will be escaped within the output of the Jira issues macro. This is to prevent the possibility of malicious HTML being served by an untrusted Jira server. The most likely field where you will notice this is in the description field.

This example shows how a description column may be displayed in Jira:

<table>
<thead>
<tr>
<th>Description</th>
</tr>
</thead>
</table>
| This is
  * the description
  * of my issue |

If there is no application link between Jira and Confluence, the description will appear in the Jira issues macro like this:

```html
<p>This is<ul><li>the description</li><li>of my issue</li></ul></p>
```

Disabling the Jira Issues macro

The functionality is provided by a system app called 'Jira Macros'. To make the macro unavailable on your site, you can disable the app. See Disabling and enabling apps.

Notes

HTTPS: The Jira Issues macro can access a Jira application running under SSL provided the Confluence server is configured to accept the Jira SSL certificate. See Connecting to LDAP or Jira applications or Other Services via SSL.

Custom fields can be added as columns to the table simply by using the name of the field with no quotes. Earlier versions of the macro required you to use the custom field id, e.g. customfield_10100.

Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

Macro name: jiraissues
Macro body: None.

This example uses a Jira filter.

```
{jiraissues:anonymous=true|url=https://jira.atlassian.com/issues/?filter=41225}
```

A number of additional parameters that are not available via the macro browser are available in storage format and wiki markup.

See additional parameters...

<table>
<thead>
<tr>
<th>Parameter name</th>
<th>Required</th>
<th>Default</th>
<th>Parameter description and accepted values</th>
</tr>
</thead>
<tbody>
<tr>
<td>anonymous</td>
<td>No</td>
<td>false</td>
<td>If this parameter is set to 'true', your Jira application will return only the issues which allow unrestricted viewing. That is, the issues which are visible to anonymous viewers. If this parameter is omitted or set to 'false', then the results depend on how your administrator has configured the communication between the Jira application and Confluence. By default, Confluence will show only the issues which the user is authorized to view. Note: This parameter is available only if you insert the macro via wiki markup or by editing the storage format of the page. The macro browser does not offer this parameter.</td>
</tr>
<tr>
<td>baseurl</td>
<td>No</td>
<td>The value of the 'url' parameter</td>
<td>If you specify a 'baseurl', then the link in the header, pointing to your Jira application, will use this base URL instead of the value of the 'url' parameter. This is useful when Confluence connects to Jira with a different URL from the one used by other users.</td>
</tr>
</tbody>
</table>
| **columns** | **No** | By default, the following columns are shown:  
- type  
- key  
- summary  
- assignee  
- reporter  
- priority  
- status  
- resolution  
- created  
- updated  
- due  

A list of Jira column names, separated by semi-colons (;). You can include many columns recognized by your Jira application, including custom columns.

Some columns, such as those that need to be calculated by Jira like 'work ratio' or 'time to resolution', can't be viewed in Confluence. |
| --- | --- | --- |
| **count** | **No** | **false**  
If this parameter is set to 'true', the issue list will show the number of issues in Jira. The count will be linked to your Jira site. |
| **cache** | **No** | **on**  
The macro maintains a cache of the issues which result from the Jira query. If the 'cache' parameter is set to 'off', the relevant part of the cache is cleared each time the macro is reloaded. (The value 'false' also works and has the same effect as 'off'.)  
**Note:** This parameter is available only if you insert the macro via wiki markup or by editing the storage format of the page. The macro browser does not offer this parameter. |
<table>
<thead>
<tr>
<th>Parameter</th>
<th>No</th>
<th>Static</th>
</tr>
</thead>
</table>
| Height      | 480 (if render mode is dynamic) | The height in pixels of the table displaying the issues. Note that this height specification is ignored in the following situations:  
- If the 'renderMode' parameter (see below) is set to 'static'.  
- When the issues are displayed in a PDF or Word document, in an email message or in an RSS feed.  
**Note:** This parameter is available only if you insert the macro via wiki markup or by editing the storage format of the page. The macro browser does not offer this parameter. |
| Render Mode | Static | If the value is 'dynamic', the Jira Issues macro offers an interactive display which people can manipulate as follows:  
- Click the column headers to sort the output.  
- Drag and drop the columns into a different order.  
- Temporarily remove a column from the display.  
- View a page of issues at a time, for faster response times.  
A value of 'static' will disable the dynamic display features.  
**Note:** This parameter is available only if you insert the macro via wiki markup or by editing the storage format of the page. The macro browser does not offer this parameter. |
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>title</td>
<td>No</td>
<td>You can customize the title text at the top of the issues table with this parameter. For instance, setting the title to 'Bugs-to-fix' will replace the default 'Jira Issues' text. This can help provide more context to the list of issues displayed. <strong>Note:</strong> This parameter is available only if you insert the macro via wiki markup or by editing the storage format of the page. The macro browser does not offer this parameter.</td>
</tr>
<tr>
<td>url</td>
<td>Yes</td>
<td>The URL of the XML view of your selected issues. <strong>Note:</strong> If the URL in the 'url' parameter does not contain a <code>tempMax</code> argument, then the value of <code>tempMax</code> will default to 500. If your Jira server is version 3.12 or earlier, this means that the Jira Issues macro will return a maximum of 500 issues. If your Jira server is version 3.13 or later, a value of 500 means that the Jira Issues macro will return a maximum of 500 issues per page.</td>
</tr>
<tr>
<td>width</td>
<td>100%</td>
<td>The width of the table displaying the issues. Can be entered as a percentage (%) or in pixels (px). <strong>Note:</strong> This parameter is available only if you insert the macro via wiki markup or by editing the storage format of the page. The macro browser does not offer this parameter.</td>
</tr>
</tbody>
</table>

**Do more with Confluence and Jira**

Take displaying Jira issues to the next level, with these apps on the Atlassian Marketplace:
- Issue Macro from Jira to Confluence: customize the look of a single Jira Issue report or generate...
JUnit Report Macro

The JUnit Report macro is no longer supported
This macro will be removed in a future Confluence release. Find out more

The JUnit Report macro displays a summary of JUnit test results from a directory accessible by the Confluence server. JUnit is a unit testing framework which allows programmers to ensure that individual units of Java source code are functioning correctly.

For security reasons JUnit test result files can only be imported from a specified location in the Confluence server's file system. We recommend administrators create a folder in their Confluence home directory, add the system property `confluence.junit.report.directory` and specify the location for JUnit test result files to be imported from. JUnit Test result files cannot be imported from the server until this system property is set.

The JUnit Report macro appears as shown in the screenshot below.

Screenshot: The JUnit Report macro in Confluence

<table>
<thead>
<tr>
<th>Test</th>
<th>Time</th>
<th>Messages</th>
</tr>
</thead>
<tbody>
<tr>
<td>MoneyTest</td>
<td>00:03.391</td>
<td>Tests:Failures:Exceptions: 1 0 0</td>
</tr>
<tr>
<td>testAdd</td>
<td>00:03.0</td>
<td></td>
</tr>
</tbody>
</table>

Note: When generating reports from the JUnit Report macro, set the Apache Ant formatter to 'XML'.

Using the JUnit Report macro

To add the JUnit Report macro to a page:

1. From the editor toolbar, choose **Insert**
   - > **Other Macros**
2. Find and select the required macro

**Speed it up with autocomplete:** Type `{` and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.

To edit an existing macro: Click the macro placeholder and choose **Edit**. This will open the macro details, so you can edit the macro parameters.
Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Required</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>URL of the test result XML file (url)</td>
<td>Required</td>
<td>Default</td>
<td>URL of a particular test result XML file. Is overridden by the Directory (URL) of your test result files parameter if you use both.</td>
</tr>
<tr>
<td></td>
<td>Must include either the directory or the url parameter</td>
<td>None</td>
<td></td>
</tr>
<tr>
<td>Directory (URL) of your test result files</td>
<td>Required</td>
<td>Default</td>
<td>URL of a directory containing your test result files. This must be a directory name and not the XML file itself.</td>
</tr>
<tr>
<td>(directory)</td>
<td>Must include either the directory or the url parameter</td>
<td>None</td>
<td>Overrides the URL of the test result XML file parameter if you use both.</td>
</tr>
<tr>
<td>Report Detail (reportdetail)</td>
<td>No</td>
<td>all</td>
<td>Detail for the report. Can be all, fixture, summary or failuresonly.</td>
</tr>
</tbody>
</table>

For Confluence installations without anonymous user access, you can specify logon credentials as part of this parameter in the form of URL parameters:

- **os_username** — The username of a Confluence user with permission to access to the JUnit test results.
- **os_password** — The password of the Confluence user specified in the os_username parameter.
### Debug (debug)

| No | None | Shows the content of failures, as well as the error messages. |

### Wiki markup examples

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** junitreport

**Macro body:** None.

Loading JUnit reports from a local drive:

```
{junitreport:directory=file:///C:/TEMP/}
```

Loading JUnit reports from a network drive:

```
{junitreport:url=http://*host*/*path*}
```

Loading JUnit reports from a Confluence site:

```
{junitreport:url=http://yourConfluenceInstance.com/download/attachments/<page id>/file.xml}
```

Loading JUnit reports from a Confluence site that requires authentication:

If your Confluence site is not accessible by anonymous users, specify login credentials with the `os_username` and `os_password` URL parameters (as part of the macro’s `url` parameter). In this case, we are specifying a username of 'admin' and a password of 'secret'.

```
{junitreport:url=http://yourConfluenceInstance.com/download/attachments/<page id>/file.xml?os_username=admin&os_password=secret}
```

#### Labels List Macro

The Labels List macro displays a list of all labels within the current space. Each label in the list links to a page that displays all pages in the current space that contain that label.

**Using the Labels List macro**

**To add the Labels List macro to a page:**

1. From the editor toolbar, choose **Insert**
   + **Other Macros**
2. Find and select the required macro

**Speed it up with autocomplete:** Type `{ and the beginning of the macro name, to see a list of suggested macros. In this example we’re inserting the cheese macro.
To edit an existing macro: Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.

Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter name</th>
<th>Required</th>
<th>Default</th>
<th>Parameter description and accepted values</th>
</tr>
</thead>
<tbody>
<tr>
<td>Restrict to this Space Key</td>
<td>No</td>
<td>Current space</td>
<td>The key of the space whose labels you want to display.</td>
</tr>
<tr>
<td>(spaceKey)</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Excluded label(s)</td>
<td>No</td>
<td>Blank</td>
<td>The labels that you do not want to appear in the list.</td>
</tr>
<tr>
<td>(excludedLabels)</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** listlabels

**Macro body:** None.

```
{listlabels:spaceKey=DOC}
```

Livesearch Macro

The Livesearch macro allows you to add a search box to a Confluence page. When users enter a search term into the search box, Confluence will dynamically display matching results as they type.

Using the Livesearch macro

**To add the Livesearch macro to a page:**

1. From the editor toolbar, choose Insert
   
   > Other Macros
2. Find and select the required macro

**Speed it up with autocomplete:** Type { and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.
To edit an existing macro: Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.

Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Restrict to this Space Key</strong></td>
<td>all spaces</td>
<td>Specify a space key to limit the search to the given space. Case-sensitive.</td>
</tr>
<tr>
<td><strong>(spaceKey)</strong></td>
<td></td>
<td>Alternatively, use @self to restrict the search to the current space.</td>
</tr>
<tr>
<td><strong>Restrict to label(s)</strong></td>
<td></td>
<td>Specify labels to limit the search to content with that label. If unspecified will search all content regardless of label.</td>
</tr>
<tr>
<td><strong>(labels)</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Size</strong></td>
<td>medium</td>
<td>Choose a medium or large search field size.</td>
</tr>
<tr>
<td><strong>(size)</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Placeholder text</strong></td>
<td></td>
<td>Specify the placeholder text to appear in the search field, for example 'Search this space'</td>
</tr>
<tr>
<td><strong>(placeholder)</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Type</strong></td>
<td>all</td>
<td>Specify the content types to be included in the search - choose from pages, blogs, comments, space descriptions, or all content types.</td>
</tr>
<tr>
<td><strong>(type)</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Additional</strong></td>
<td>space name</td>
<td>Display the space name, a page excerpt or nothing under the search result.</td>
</tr>
<tr>
<td><strong>(additional)</strong></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

Macro name: livesearch

Macro body: None.
Loremipsum Macro

The Loremipsum macro displays paragraphs of pseudo-Latin text (more information). You can use this macro to generate more-or-less meaningless text for demonstration purposes in pages showing a draft layout or arrangement of page elements. The text is deliberately non-meaningful so that it does not influence the viewer's perception of the page arrangement or design.

A basic example of the Loremipsum text:

Using the Loremipsum macro

To add the Loremipsum macro to a page:

1. From the editor toolbar, choose Insert
   
   > Other Macros
2. Find and select the required macro

   Speed it up with autocomplete: Type { and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.

To edit an existing macro: Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.

Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of Paragraphs</td>
<td>3</td>
<td>Determines the amount of pseudo-Latin (space-filler) text to display. The macro will display a maximum number of 30 paragraphs. Parameter is unnamed in storage format and wikimarkup.</td>
</tr>
</tbody>
</table>
Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

Macro name: loremipsum

Macro body: None.

```{loremipsum:2}
```

Multimedia Macro

Use the multimedia macro to embed attached video, animation, and other multimedia files to your page. The macro uses the HTML5 `<video>` tag, so the type of video your page viewers can see depends on the video formats their browser supports with the HTML5 `<video>` tag. For example, Quicktime videos (.mov or .qt) can only be viewed in Safari, as that file type is not supported by other browsers.

If you want to display online multimedia content, like YouTube and Vimeo videos, take a look at the Widget get Connector Macro.

The file preview also supports MP3 audio and MP4 video files. This is handy when you want to play a video in a larger format.

To add the Multimedia macro to your page:

1. From the editor toolbar, choose Insert
   > Other Macros
2. Find and select the required macro

Speed it up with autocomplete: Type `{ and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.

To edit an existing macro: Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.

Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter name</th>
<th>Required</th>
<th>Default</th>
<th>Parameter description and accepted values</th>
</tr>
</thead>
</table>

Created in 2019 by Atlassian. Licensed under a Creative Commons Attribution 2.5 Australia License.
### Page name *(page)*

No

Current page

The name of the page to which the multimedia file is attached. Start typing the name of the page and then select it from list of suggested pages. Include the spacekey if you want to specify a page in another space (for example, MYSPACE: My Page Title).

### File* *(name)*

Yes

None

File name of the attached multimedia file.

### Width

No

If not specified, the browser will determine the width based on the file type.

Width of the movie window to be displayed on the page. By default, this value is specified in pixels. You can also choose to specify a percentage of the window's width, or any other value accepted by HTML.

### Height

No

If not specified, the browser will determine the height based on the file type.

Height of the movie window to be displayed on the page. By default, this value is specified in pixels. You can also choose to specify a percentage of the window's height, or any other value accepted by HTML.

### Autoplay *(autostart)*

No

false

If the parameter is set to true then the video or audio file will start playing as soon as the page is loaded. If this option is set to false then the file will not play until the user clicks the icon or image on the page.

**Wiki markup example**

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** multimedia

**Macro body:** None.

```
{multimedia:space=DOC|page=My macros|name=ninjas.swf|autostart=true}
```

**Navigation Map Macro**
The Navigation Map macro displays a navigable map of the pages tagged with a given label.

Using the Navigation Map Macro

**To add the Navigation Map macro to a page:**

1. From the editor toolbar, choose **Insert**
   + > **Other Macros**
2. Find and select the required macro

**Speed it up with autocomplete:** Type { and the beginning of the macro name, to see a list of suggested macros. In this example we’re inserting the cheese macro.

**To edit an existing macro:** Click the macro placeholder and choose **Edit**. This will open the macro details, so you can edit the macro parameters.

**Parameters**

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Label</td>
<td>none</td>
<td>Specify the label associated with the pages you want to show in the navigation map. This parameter is unnamed in storage format and wikimarkup.</td>
</tr>
<tr>
<td>Map Title (title)</td>
<td>none</td>
<td>Specify a title for the navigation map.</td>
</tr>
<tr>
<td>Number of Cells Per Row (wrapAfter)</td>
<td>5</td>
<td>Specify the number of cells in a row</td>
</tr>
<tr>
<td>Cell Width (Pixels) (cellWidth)</td>
<td>90</td>
<td>Specify the cell width (enter a number only, don't include px)</td>
</tr>
<tr>
<td>Cell Height (Pixels) (cellHeight)</td>
<td>60</td>
<td>Specify the cell height (enter a number only, don't include px)</td>
</tr>
</tbody>
</table>
1. **Navigation Map Theme (theme)**

   Define a theme for the navmap (Server only).

   If you want to create your own navmap 'look and feel' (for example, one with rounded corners), you need to add a customized navmap macro theme file to the WEB-INF/classes/com/atlassian/confluence/plugins/macros/advanced directory. The file name convention to use is navmap-mytheme.vm. Use the name of your choice for the mytheme part of the file name, which is also the value you use for this parameter. Hence, if your theme was called navmap-roundededges.vm, use the value of rounded edges for this parameter.

**Wiki markup example**

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** navmap

**Macro body:** None.

```
{navmap:mylabel|wrapAfter=4|title=My map name|cellHeight=50px|theme=navmap-mytheme.vm|cellWidth=80px}
```

---

**Network Macro**

The Network macro displays a list of Network activity on a Confluence page or blog post. You can specify the user whose network activity you wish to show. These interactions include the users that the specified user is following or users who are following the specified user. The Network macro shows each listed user by their profile picture. It also provides a choice of two themes and the ability to limit the number of users in the list.

**Screenshot: Network macro**

Using the Network macro

**To add the Network macro to a page:**

1. From the editor toolbar, choose **Insert**
2. Find and select the required macro

**Speed it up with autocomplete:** Type `{` and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.

To edit an existing macro: Click the macro placeholder and choose **Edit**. This will open the macro details, so you can edit the macro parameters.

**Parameters**

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Username</td>
<td>Current user's username</td>
<td>The username of the Confluence user whose network interactions you wish to show. If no username is specified, then current user's (that is, your) network interactions are shown.</td>
</tr>
</tbody>
</table>
| Mode      | following | Determines which users are listed, with respect to the specified user:  
- **following** – those who the user is following.  
- **followers** – those who are following the user.  
This parameter is unnamed in storage format and wikimarkup. |
| Theme     | full    | Determines how the user’s network is displayed:  
- **full** – shows a large version of user’s profile pictures and, if the **following** mode is set, provides an entry field function to follow more users.  
- **tiny** – shows only the small version of user’s profile pictures. |
Maximum Results

| No limit imposed up to a maximum of 30 | Restricts the number of users displayed. If the number of users exceeds the specified maximum, then a Show All link is provided. This link leads to the specified user's Network view, showing the complete list of network interactions. |

wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

Macro name: network

Macro body: None.

{network:followers|username=admin|max=10|theme=full}

Disabling the Network macro

The Network macro is provided by the 'network' module in the 'Profile Macros' system app (plugin). To remove the macro from your site, you can disable this module. See Disabling and enabling apps.

Noformat Macro

The Noformat macro displays a block of text in monospace font with no other formatting.

Using the Noformat Macro

To add the Noformat macro to a page:

1. From the editor toolbar, choose Insert
   
   > Other Macros

2. Find and select the required macro

Speed it up with autocomplete: Type \ and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.

To edit an existing macro: Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.

Enter the content that is to be unformatted into the body of the macro placeholder.

Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the
parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>No Panel</td>
<td>False</td>
<td>Removes the panel around the content.</td>
</tr>
</tbody>
</table>

Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** noformat

**Macro body:** Accepts plain text.

```
{noformat:nopanel=true}http://www.example.com{noformat}
```

Office Excel Macro

The Office Excel macro displays the content of an Excel spreadsheet on a wiki page. First attach the spreadsheet to a Confluence page, then use the macro to display the content. When viewing the page, people will see the content of the spreadsheet, without needing to have Office installed.

For details, see the View File Macro.

Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** viewxls

**Macro body:** None.

```
{viewxls:col=5|page=Docs|name=My document.xls|grid=false|sheet=mysheet|row=5}
```

Office PowerPoint Macro

The Office PowerPoint macro displays the content of a PowerPoint presentation on a wiki page. First attach the presentation to a Confluence page, then use the macro to display the content. When viewing the page, people will see the content of the presentation, without needing to have Office installed.

For details, see the View File Macro.

Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** viewppt

**Macro body:** None.

```
{viewppt:height=20%|page=Docs|width=20%|name=My document.ppt|slide=4}
```
Office Word Macro

The Office Word macro displays the content of a Word document on a wiki page. First attach the document to a Confluence page, then use the macro to display the content. When viewing the page, people will see the content of the document, without needing to have Office installed.

For details, see the View File Macro.

Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

Macro name: viewdoc

Macro body: None.

{viewdoc:page=Docs|name=My_document.doc}

Page Index Macro

The Page Index macro creates an alphabetical index of all pages in the current space.

The top section provides the total number of pages in the space, followed by a count of pages for each letter. Click any letter to jump to the bottom section, which lists all the pages in the space alphabetically. The first few lines of each page will be included if there are less than 200 pages in the space.

The Page Index macro can be quite memory hungry in large spaces. To prevent it causing out of memory errors in your site, we don't show page excerpts when there are more than 200 pages in the space, and don't list any pages if there are more than 5000 in the space.

This limit is configurable. System Administrators can use the page.index.macro.max.pages system property to reduce the number of pages displayed.

Screenshot: Page Index macro (partial view)
Using the Page Index macro

To add the Page Index macro to a page:

1. From the editor toolbar, choose **Insert**
   
   > **Other Macros**

2. Find and select the required macro

**Speed it up with autocomplete:** Type `{` and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.

To edit an existing macro: Click the macro placeholder and choose **Edit**. This will open the macro details, so you can edit the macro parameters.

This macro accepts no parameters.

**Wiki markup example**

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** index

**Macro body:** None.
Page Properties Macro

The Page Properties and Page Properties Report macro work together to show summary information from one page on another page. You can see examples of these two macros in action in the Decisions and Product Requirements blueprints.

Adding the Page Properties macro to a page

The Page Properties macro uses key/value pairs.

To add the Page Properties macro to a page:

1. In the editor, choose Insert > Other Macros > Page Properties
2. In the macro body create a two column table
3. In the left column list your 'keys' – these will be the column headings in your report table
4. In the right column list the value for each key – these will populate the rows in your report table
5. Add a label to your page (you'll need to specify this label in the page properties report macro)
6. Save your page

Next you need to add the Page Properties Report macro to another page.

Here's an example of the Page Properties macro in the editor. Deadline, Current Status, and Team will be column headings in the report.

Here's what the example above will look like in the Page Properties Report.
You can also set up the Page Properties macro horizontally. To do this:

- Create a two row rather than two column table, and ensure the first row has the heading row style applied.
- List your keys in the first row, and values in the second row.

The Page Properties Report Macro will be able to pull this information accurately even if you're using the Page Properties Macro vertically elsewhere.

Using multiple Page Properties macros on one page

You can add multiple Page Properties macros on a single page, and choose whether to include all or only specific macros in the report. You might use multiple macros because you want the information in the macro to display in context with the rest of the page, or because you want to be able to report on individual Page Properties macros separately.

The Page Properties macro includes an optional ID parameter that can be used to identify specific Page Properties macros.

To show the contents of all Page Properties macros in the report:

1. Add a label to the page containing the Page Properties macros
2. Specify this label in the Page Properties Report macro

To show the contents of selected Page Properties macros in the report:

1. Add a label to the page containing the Page Properties macros
2. Specify an ID in the Page Properties macro that you want to report on
3. Specify both the label and ID in the Page Properties Report macro

Note: The Page Properties Report macro can only accept one page label, and one ID.

See the Page Properties macro in action in [How to document product requirements in Confluence](https://confluence.atlassian.com/pages/properties.html).
This powerful macro lets you create a summary page that pulls in information from multiple pages.

Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Page Properties ID</td>
<td>(None)</td>
<td>Optional ID used to identify a particular Page Properties macro on a page. Specify this ID in the Page Properties Report to include summary information from macros with this ID only.</td>
</tr>
<tr>
<td>Hidden</td>
<td>False</td>
<td>Determines whether the data in the Page Properties macro will be displayed on the current page. This setting does not affect the display of the detail in the Page Properties Report macro.</td>
</tr>
</tbody>
</table>
Notes

- You can't use macros in the left column as the data in this column is used to populate the column headings in your Page Properties Report macro.
- It is not possible to reference the metadata using the metadata key from within the page, or anywhere else on a Confluence page.
- There is a known issue where the Page Properties Report macro does not correctly display content from multiple Page Properties macros. See [CONFSERVER-34141](#) for more information.

Page Properties Report Macro

The Page Properties and Page Properties Report macro work together to enable you to show summary information from one page on a another page. You can see examples of these two macros in action on the Decision and Product Requirements blueprints.

This macro was previously known as the Details Summary macro.

Adding the Page Properties Report macro to a page

To add the Page Properties Report macro to a page:

1. In the editor, choose **Insert > Other Macros > Page Properties Report**.
2. Enter the **Labels** you want to report on - this is the label added to pages containing the Page Properties macro.
3. Further narrow down your search by adding more fields, or specifying a Page Properties ID (more info on this below)
4. Choose **Insert**.

Here's how the macro looks on your page:

<table>
<thead>
<tr>
<th>Title</th>
<th>Current status</th>
<th>Deadline</th>
<th>Team</th>
</tr>
</thead>
<tbody>
<tr>
<td>Project DEF</td>
<td>Not started</td>
<td>1 June</td>
<td>Purple Monkeys</td>
</tr>
<tr>
<td>Project ABC</td>
<td>In Progress</td>
<td>15 November</td>
<td>Green Parrots</td>
</tr>
</tbody>
</table>

And here's how you would set it up in the macro browser:
Reporting on specific Page Properties macros

It's possible to add multiple Page Properties macros on a page, and choose whether to include all or only specific macros in the report. The Page Properties macro includes an optional ID parameter that can be used to identify specific Page Properties macros.

To show the contents of:

- **Selected Page Properties macros** in the report - specify the label for the page and the ID of the particular Page Properties macro (under Options)
- **All Page Properties macros** in the report - specify just the label for the page - leave the Page Properties ID field blank.

**Note:** The Page Properties Report macro can only accept one ID.

CQL fields

CQL (Confluence Query Language) is a query language developed for Confluence, which you can use in some macros and the Confluence search. Confluence search and CQL-powered macros allow you to add filters to build up a search query, adding as many filters as you need to narrow down the search results.

Use the **Add a filter** link to add more filters to your query.

- **Use AND, OR, and NOT operators**
  - For an OR search, specify multiple values in the same field.
    So to show pages with 'label-a', 'label-b' or both you'd put 'label-a' and 'label-b' in the same Label field, like this:

```
Label *
label-a x label-b x
```

  - For an AND search, add more than one filter and specify a single value in each.
    To show only pages with label-a and label-b you'd put 'label-a' in one label field, then add a second Label field to the macro, and put 'label-b' in the second one, like this:
Put simply, OR values are entered in the same filter, AND values are entered in different filter. Only some filters support AND. If the filter doesn't support the AND operator, you won't be able to add that filter more than once.

- For a NOT search, enter a minus sign (-) before the label. This'll exclude everything with that label.

You can use the following CQL filters to build your query:

<table>
<thead>
<tr>
<th>Filter</th>
<th>Description</th>
<th>Operators</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Label</strong></td>
<td>Include pages, blog posts or attachments with these labels.</td>
<td>OR (multiple values in the same filter)</td>
</tr>
<tr>
<td><strong>With ancestor</strong></td>
<td>Include pages that are children of this page. This allows you to restrict the macro to a single page tree.</td>
<td>OR (multiple values in the same filter)</td>
</tr>
<tr>
<td><strong>Contributor</strong></td>
<td>Include pages or blog posts that were created or edited by these people.</td>
<td>OR (multiple values in the same filter)</td>
</tr>
<tr>
<td><strong>Creator</strong></td>
<td>Include items created by these people.</td>
<td>OR (multiple values in the same filter)</td>
</tr>
<tr>
<td><strong>Mentioning user</strong></td>
<td>Include pages and blog posts that @mention these people.</td>
<td>OR (multiple values in the same filter)</td>
</tr>
<tr>
<td><strong>With parent</strong></td>
<td>Include only direct children of this page (further sub-pages won't be included)</td>
<td>EQUALS (one page only)</td>
</tr>
<tr>
<td><strong>In space</strong></td>
<td>Include items from these spaces.</td>
<td>OR (multiple values in the same filter)</td>
</tr>
<tr>
<td><strong>Including text</strong></td>
<td>Include items that contain this text.</td>
<td>CONTAINS (single word or phrase)</td>
</tr>
<tr>
<td><strong>With title</strong></td>
<td>Include items that contain this text in the title.</td>
<td>CONTAINS (single word or phrase)</td>
</tr>
<tr>
<td><strong>Of type</strong></td>
<td>Include only pages, blogs or attachments.</td>
<td>OR (multiple values in the same filter)</td>
</tr>
</tbody>
</table>

* This field is required in CQL-powered macros.
** You can add these filters in CQL-powered macros but in search they're part of the standard search filters, so they don't appear in the Add a filter menu.

Macro display options

These options control how the macro appears on your page.
### Page Properties ID

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Page Properties ID</td>
<td>Blank</td>
<td>If not specified, the report will show data from all Page Properties macros on a page, where there are multiple macros. Specify an ID to include only data from Page Properties macros with the same ID.</td>
</tr>
</tbody>
</table>

### Title column heading

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Title column heading</td>
<td>Title</td>
<td>The heading to display on the first column in the report table. This column contains links to pages displayed by the report. The default column heading is 'Title'.</td>
</tr>
</tbody>
</table>

### Columns to show

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Columns to show</td>
<td></td>
<td>If not specified, the report will show all columns. You can specify a comma separated list of columns to include.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>If your column heading includes commas, use double quotes around the column name. If your column heading includes quotes, use double quotes. For example, A column, &quot;My &quot;new&quot; column, yes&quot;, Third column</td>
</tr>
</tbody>
</table>

### Number of items to display

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of items to display</td>
<td>30</td>
<td>Number of items to display in the table before displaying pagination options for additional items.</td>
</tr>
</tbody>
</table>

### Sort by

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sort by</td>
<td>Modified</td>
<td>Sort the table by a specific column heading. Enter the column name, exactly as it appears in the corresponding Page Properties macro. Select the Reverse Sort check box to sort the table in reverse order.</td>
</tr>
</tbody>
</table>

### Show Comments Count

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Show Comments Count</td>
<td>No</td>
<td>Displays the number of comments for each page in the table.</td>
</tr>
</tbody>
</table>

### Show Likes Count

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Show Likes Count</td>
<td>No</td>
<td>Displays the number of likes for each page in the table.</td>
</tr>
</tbody>
</table>

### Troubleshooting

If your report is empty, check:

- You have entered the label correctly and that the label does appear on pages containing a Page Properties macro.
- The Page Properties macros on each page are configured correctly.
- Any other fields you have specified have not narrowed your search too far (for example there are no pages with that label under the Parent page you’ve specified).
- There is a known issue where the Page Properties Report macro does not correctly display content from multiple Page Properties macros. See [CONFSERVER-34141 CLOSED](CONFSERVER-34141) for more information.

### Page Tree Macro

The Page Tree macro displays a dynamic, hierarchical list of pages starting from a specified parent (root) page. It can act as a table of contents or a list of related topics. When viewing the page tree, your reader can click a link to view the relevant page. The page's current position is highlighted in the page tree.

### Using the Page Tree Macro

**To add the Page Tree macro to a page:**

1. From the editor toolbar, choose **Insert**
   
   > **Other Macros**
   
2. Find and select the required macro
**Speed it up with autocomplete:** Type `{ and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.

![Macro suggestions](image)

**To edit an existing macro:** Click the macro placeholder and choose **Edit**. This will open the macro details, so you can edit the macro parameters.

![Edit and Remove](image)

Click **Refresh** in the Macro Browser to see the effect of changes to the macro parameters.

**Macro Parameters**

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
</table>
| **Root Page**   | The home page of the space | Specify the parent page for the page tree. The tree will include all children of the given page, plus their children and grand-children etc. The tree will **not** include the root page itself. Specify the page title or a special value as follows:  
  - Your page title — to specify a page name for the parent or root of the tree. The tree will include all children and grand-children of the specified root. The tree will **not** include the specified root page itself.  
  - '@home' — will include all pages under the home page of the space (default).  
  - '@self' — will include all pages under the current page.  
  - '@parent' — will include all pages under the parent of the current page, including the current page.  
  - '@none' — will include all pages in the space, including orphaned pages and the home page. |
<table>
<thead>
<tr>
<th>Setting</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
</table>
| **Sort Pages By** (sort)            | position | Specify the order to display the pages in the tree. This sort order is for display purposes only. It does not permanently re-arrange the page order. The value may be one of the following:  
  - bitwise — sort alphabetically, for example: title1, title10, title2.  
  - creation — sort by date of creation.  
  - modified — sort by order of date last modified.  
  - natural — sort in 'natural' alphabetical order, for example: title1, title2, title10.  
  - position — sort by the default Confluence sorting rules. If your pages have been ordered manually, this sort will respect the defined order. Otherwise the pages will be displayed in the 'natural' alphabetical order, such as: title1, title2, title10. |
| Include Excerpts in Page Tree (excerpt) | false | Select if you want the page tree to show excerpts from each page. The excerpts must be defined on each page by the Excerpt macro. |
| Reverse Order (reverse)             | false | Select to show the pages in reverse (descending) natural order. Must be used in combination with the **Sort Pages By** parameter. |
| Include Search Box above Page Tree (searchBox) | false | Select if you want to include a search box above the page tree. The search box allows your readers to search within the page tree for the specified value. |
| Show Expand/Collapse Links (expandCollapseAll) | false | Select if you want to display the 'expand all' and 'collapse all' links at the top of your page tree. Your readers can click these links to open or close all branches of the tree at once.  
Available values in wikimarkup and storage format:  
  - true — Show the 'expand all' and 'collapse all' options.  
  - false — Do not show the options. |
### Start Depth

(startDepth)

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enter any number greater than 0 to set how many levels of children the tree should show when it opens for the first time.</td>
<td>1</td>
<td></td>
</tr>
</tbody>
</table>

### Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** pagetree

**Macro body:** None.

```
{pagetree:root=Page Name|sort=natural|excerpt=true|reverse=false|startDepth=3|expandCollapse All=true|searchBox=true}
```

### Page Tree Search Macro

Using the Page Tree Search macro, you can add a search box to your Confluence page. When a viewer enters a search term, Confluence will search a hierarchy of pages starting from a specified parent (root) page and return the search results.

You can also add a search box as part of a dynamic page tree, which looks like a table of contents. See the Page Tree macro.

#### Using the Page Tree Search macro

#### To add the Page Tree Search macro to a page:

1. From the editor toolbar, choose **Insert**
   
   > **Other Macros**

2. Find and select the required macro

**Speed it up with autocomplete:** Type `{ and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.

```
{cheese}
```

**To edit an existing macro:** Click the macro placeholder and choose **Edit**. This will open the macro details, so you can edit the macro parameters.

### Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>sample parameter</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Created in 2019 by Atlassian. Licensed under a [Creative Commons Attribution 2.5 Australia License](https://creativecommons.org/licenses/by/2.5/au/).
Name of Root Page (root) | none | The name of the root page whose hierarchy of pages will be searched by this macro. If this not specified, the root page is the current page.

Note: Unlike the Page Tree macro, the Page Tree Search macro does not accept the special values that start with an @ sign, such as @home or @self.

Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

Macro name: pagetreesearch

Macro body: None.

{pagetreesearch:root=My page name}

Panel Macro

The Panel macro displays a block of text within a customizable panel, like this:

My Title

A formatted panel.

Handy hint: You can use panels within columns, in table cells and in the sections defined by page layouts.

Using the Panel macro

To add the Panel macro to a page:

1. From the editor toolbar, choose Insert
   > Other Macros
2. Find and select the required macro

Speed it up with autocomplete: Type { and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.

To edit an existing macro: Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.
Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Panel Title (title)</td>
<td>none</td>
<td>The title of the panel. If specified, this title will be displayed in its own title row.</td>
</tr>
<tr>
<td>Border Style (borderStyle)</td>
<td>solid</td>
<td>The style of the panel's border. Accepted values are solid, dashed and other valid CSS border styles.</td>
</tr>
<tr>
<td>Border Color (borderColor)</td>
<td></td>
<td>The color of the panel's border. Colors can be specified as HTML color names or hexadecimal codes.</td>
</tr>
<tr>
<td>Border Pixel Width (Value Only) (borderWidth)</td>
<td></td>
<td>The width of the panel's border (in pixels).</td>
</tr>
<tr>
<td>Background Color (bgColor)</td>
<td></td>
<td>The background color of the panel. Colors can be specified as HTML color names or hexadecimal codes.</td>
</tr>
<tr>
<td>Title Background Color (titleBGColor)</td>
<td></td>
<td>The background color of the title row of the panel. Colors can be specified as HTML color names or hexadecimal codes.</td>
</tr>
<tr>
<td>Title Text Color (titleColor)</td>
<td></td>
<td>The color of the text in the title row of the panel. Colors can be specified as HTML color names or hexadecimal codes.</td>
</tr>
</tbody>
</table>

Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

Macro name: panel

Macro body: Accepts rich text.

```
{panel:title=My title|borderStyle=dashed|borderColor=blue|titleBGColor=#00a400|titleColor=white|bgColor=#72bc72}
A formatted panel
{panel}
```

Do more in Confluence

To further customize panels, check out these apps on the Atlassian Marketplace:

- Panelbox: Create a set of designed panelboxes to display identical topics in the same style, keeping your pages clear and easy to read
PDF Macro

The PDF macro displays the content of a PDF document on a page. First attach the document to a Confluence page, then use the macro to display the document.

For details, see the View File Macro.

Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** viewpdf

**Macro body:** None.

```markdown
{viewpdf:page=Docs|name=My document.pdf}
```

Popular Labels Macro

The Popular Labels macro displays the most popular labels used throughout your Confluence site or within a space. A popular label is a label that has been added to many pages.

Using the Popular Labels Macro

**To add the Popular Labels macro to a page:**

1. From the editor toolbar, choose Insert
2. > Other Macros
2. Find and select the required macro

**Speed it up with autocomplete:** Type `{ and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.

```
<table>
<thead>
<tr>
<th>cheese</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cheese</td>
</tr>
<tr>
<td>Open macro browser</td>
</tr>
</tbody>
</table>
```

**To edit an existing macro:** Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.

Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
</table>

---

Created in 2019 by Atlassian. Licensed under a Creative Commons Attribution 2.5 Australia License.
<table>
<thead>
<tr>
<th>Number of Labels to Display (count)</th>
<th>100</th>
<th>Specifies the total number of labels to display in the heatmap.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Restrict Labels to this Space Key (spaceKey)</td>
<td>none</td>
<td>Restricts the list of popular labels to the specified space.</td>
</tr>
</tbody>
</table>
| Style of Labels (style) | list | • **list** – displays the popular labels as a bulleted list, ordered by popularity (highest first).
| | | • **heatmap** – displays the popular labels using different font sizes for each label depending on the label's popularity, ordered by label names. |

**Wiki markup example**

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** popular-labels

**Macro body:** None.

```
{popular-labels:style=heatmap|count=20|spaceKey=ds}
```

**Profile Picture Macro**

You can use the Profile Picture macro to display a user's profile picture on a page, and it's useful for things like creating team pages that show all members of a project team.

Hover your mouse-over the picture to see the Hover Profile for the user, and choose the user’s picture or name to view their user profile. When editing the page, you can also select the macro and choose View User Profile to see the profile for the user.

**Add the Profile Picture Macro**

1. In the Confluence editor, choose **Insert > Other Macros**
2. Find and select the 'Profile picture' macro
3. Search for and select the user and choose **Save**

**Speeding up macro entry with autocomplete:** Type `{ and the beginning of the macro name, then select the macro from a list of suggested macros.

For more information, see Using Autocomplete.

**Wiki markup**

Wiki markup is not available for this macro. You cannot add this macro via wiki markup.

**Recently Updated Dashboard Macro**
The Recently Updated Dashboard macro displays a list of the most recently changed pages, blogs and files in your site. It is similar to the Recently Updated macro but with tabs to allow you to see all updates, updates from your favorite spaces or updates from your network (the people you follow).

Using the Recently Updated Dashboard macro

To add the Recently Updated Dashboard macro to a page:

1. From the editor toolbar, choose Insert
   > Other Macros
2. Find and select the required macro

Speed it up with autocomplete: Type `{ and the beginning of the macro name, to see a list of suggested macros. In this example we’re inserting the cheese macro.

To edit an existing macro: Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.

Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Space(s) (spaces)</td>
<td></td>
<td>The space which contains the page on which the macro is added</td>
</tr>
</tbody>
</table>
|                              |           | Filter content by space. The macro will display only the pages etc which belong to the space(s) you specify here. You can specify one or more space keys, separated by commas.
|                              |           | Use "*" for all spaces.                                                    |
| Include these Content Types  | all types | Filter content by type. You can specify one or more types, separated by commas. Available types are: page, blogpost or news, spacedesc, attachment, comment, mail, userinfo. |
| Only (types)                 |           |                                                                            |
Label(s) (labels)  
none  
Filter content by label. The macro will display only the pages etc which are tagged with the label(s) you specify here. You can specify one or more labels, separated by commas.  
*Note:* If there are no pages matching any of the specified labels, then Confluence will ignore the labels and will list all recently updated pages.

User(s) (users)  
all users  
Filter by username of the user who updated the content. The macro will only display content created and updated by the user(s) you specify here. You can specify one or more usernames separated by commas.

Width of Table (width)  
100%  
Specify the width of the macro display, as a percentage of the window width.

Show User Profile Pictures (showProfilePic)  
false  
Select whether profile pictures of the users who updated the content are displayed.

Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** recently-updated-dashboard  
**Macro body:** None.

```
{recently-updated-dashboard:spaces=ds|users=admin|width=50%|showProfilePic=true|labels=choc|types=page}
```

Recently Updated Macro

The Recently Updated macro displays a list of the most recently changed content within Confluence.

Using the Recently Updated Macro

**To add the Recently Updated macro to a page:**

1. From the editor toolbar, choose **Insert**  
   + ☰  
   > Other Macros  
2. Find and select the required macro

**Speed it up with autocomplete:** Type `{ and the beginning of the macro name, to see a list of suggested macros. In this example we’re inserting the cheese macro.
To edit an existing macro: Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.

Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Author(s) by username (author)</td>
<td>None specified. That is, display all</td>
<td>Filter the results by author. The macro will display only the pages etc which were last modified by the author(s) you specify here. You can specify multiple users.</td>
</tr>
<tr>
<td></td>
<td>content</td>
<td></td>
</tr>
<tr>
<td><strong>Space(s)</strong> (spaces)</td>
<td>@self</td>
<td></td>
</tr>
<tr>
<td>----------------------</td>
<td>-------</td>
<td></td>
</tr>
<tr>
<td>That is, the space which contains the page on which the macro is used</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

This parameter allows you to filter content by space. The macro will display only the pages etc which belong to the space(s) you specify here.

You can specify one or more space keys, separated by a comma or a space.

- To exclude content in a specific space, put a minus sign (−) immediately in front of that space key. For example: If you specify a space key of −BADSPACE you will get only content which is not in the BADSPACE.
- To indicate that the results must come from a specific space, put a plus sign (+) immediately in front of that space key. For example: If you specify a space key of +GOODSPACE you will get only content in GOODSPACE. (Note that this is not particularly useful, because each content item belongs to one space only. If you put a plus sign next to one space key and list other space keys too, the other space keys will be ignored.)

Special values:

- @self — The current space.
- @personal — All personal spaces.
- @global — All site spaces.
- @favorite — The spaces you have marked as favorite.
- @favourite — The same as @favorite above.
- @all — All spaces in your Confluence site.
- * — The same as @all above.

When specifying a personal space, remember to use the tilde (˜) sign in front of the username, such as ˜jbloggs or ˜~jbloggs@example.com.
| **Label(s)** *(labels)* | None specified i.e. display all content | Filter the results by label. The macro will display only the pages etc which are tagged with the label(s) you specify here.

You can specify one or more label values, separated by a comma or a space.

- To exclude content which matches a given label, put a minus sign (-) immediately in front of that label value. For example: If you specify a label value of `-badpage` you will get only content which is not labeled with 'badpage'.
- To indicate that the results must match a given label value, put a plus sign (+) immediately in front of that label value. For example: If you specify a label value of `+superpage,+goodpage` you will get only content which has at least two labels, being 'superpage' and 'goodpage'.

The labels parameter only applies to the **page** and **blog** content types. |
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Width of Table</strong> <em>(width)</em></td>
<td>100%</td>
<td>Specify the width of the macro display, as a percentage of the window width.</td>
</tr>
</tbody>
</table>
| Include these Content Types Only (types) | All types | This parameter allows you to filter content by content type. The macro will display only the content of the type you specify here.

You can specify one or more types, separated by a comma or a space.

To exclude content of a given content type, put a minus sign (-) immediately in front of that content type. For example: If you specify a content type of `-blogpost` you will get pages and all other content except for blog posts.

Available values:
- `page` — Pages.
- `blogpost` or `news` — Blog posts, also known as news items.
- `comment` — Comments on pages and blog posts.
- `attachment` — Attachments.

| Maximum Number of Results (max) | 15 | Specify the maximum number of results to be displayed. If this parameter is omitted, then a maximum of 15 results are displayed. The theoretical maximum value that this parameter can accept is $2^{31} - 1$ (or 2147483647), though this has been limited to 200 in the code, for performance reasons. More details are here. |
**theme**

*theme*

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
</table>
| concise | Choose the appearance of this macro:  
- **concise** — the default list, showing the names of pages which were updated or commented on, the users who made the page modifications and time when the modifications occurred.  
- **social** — lists recent modifications in reverse chronological order, but groups them by user into short time segments. A 'sub' list appears within each user's time segment, showing the names of pages which they updated or commented on and time when these modifications occurred.  
- **sidebar** — lists recent updates in reverse chronological order, showing the names of pages which were updated or commented on and time when the page modifications occurred. This theme does not show authorship. |

**Show User Profile Pictures**

*showProfilePic*

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>false</td>
<td>Specify <code>showProfilePic=true</code> to display the profile pictures of the users who updated the content.</td>
</tr>
</tbody>
</table>

**Hide Title**

*hideHeading*

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
</table>
| False | Determines whether the macro hides or displays the text 'Recently Updated' as a title above the list of content. Only available in wikimarkup and storage format.  
**Accepted values:**  
- **true** — Title is hidden.  
- **false** — Title is shown. |

**Notes**

- The Recently Updated Dashboard macro is similar to this macro, but is intended for display on the Confluence dashboard.  
- If you would like to change the wording displayed by the Recently Updated macro, please refer to the document on modifying the Confluence interface text.

**Wiki markup example**

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.  
**Macro name:** `recently-updated`
Recently Used Labels Macro

The Recently Used Labels macro displays a list of the labels that have been most recently added to a page, blog post or attachment. You can define the number of labels to be displayed and the scope (the current space, your personal space or site spaces, also known as 'global' spaces).

Using the Recently Used Labels macro

**To add the Recently Used Labels macro to a page:**

1. From the editor toolbar, choose **Insert**
   - > Other Macros
2. Find and select the required macro

**Speed it up with autocomplete:** Type `{ and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.

To edit an existing macro: Click the macro placeholder and choose **Edit**. This will open the macro details, so you can edit the macro parameters.

**Parameters of this macro**

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Number of Labels to Display</strong> (count)</td>
<td>10</td>
<td>Specifies the total number of labels to display in the list.</td>
</tr>
<tr>
<td><strong>Scope for Retrieving Labels</strong> (scope)</td>
<td>global</td>
<td>Specifies the scope of labels to be displayed in the list. Valid values include:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• global — covers all site spaces (non-personal) in the Confluence installation.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• space — the current space.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• personal — your own personal space.</td>
</tr>
</tbody>
</table>
## List Style

*style*

<table>
<thead>
<tr>
<th>list</th>
</tr>
</thead>
</table>

- list – displays the list of labels horizontally.
- table – includes additional information such as the page to which the label was added and the user who added it.

## Table Title

*title*

<table>
<thead>
<tr>
<th>none</th>
</tr>
</thead>
</table>

Adds a title to the top of the list in table style. Titles are only visible when the List Style parameter has been set to table.

### Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** recently-used-labels

**Macro body:** None.

```
{recently-used-labels:title=My title|scope=space|style=table|count=20}
```

### Related Labels Macro

The Related Labels macro lists all labels from every page which has one or more labels in common with the current page.

#### Using the Related Labels Macro

**To add the Related Labels macro to a page:**

1. From the editor toolbar, choose **Insert**
   
   > **Other Macros**
   
2. Find and select the required macro

**Speed it up with autocomplete:** Type `{ and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.

```
{cheese}
```

**To edit an existing macro:** Click the macro placeholder and choose **Edit**. This will open the macro details, so you can edit the macro parameters.

### Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).
### Parameter

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Restrict to these Labels</strong></td>
<td>none</td>
<td>Specify the labels for which you want to view related labels. For example, documentation, my:stuff.</td>
</tr>
</tbody>
</table>

**Wiki markup example**

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** related-labels

**Macro body:** None.

```
{related-labels:labels=choc,cake}
```

### Roadmap Planner Macro

Create simple, visual timelines that are useful for planning projects, software releases and much more with the Roadmap macro.

Roadmaps are made up of:

- **bars** to indicate phases of work
- **lanes** to differentiate between teams, products or streams
- **markers** to highlight important dates and milestones
- a **timeline** showing months or weeks.

You can provide more information about items on your roadmap by linking a bar to a page.

Here's how it appears on a page:

![Roadmap Planner Macro Example](image)

Adding the Roadmap macro

**To add the Roadmap macro to a page:**

1. From the editor toolbar, choose **Insert** → Other Macros
2. Find and select the required macro
**Speed it up with autocomplete:** Type `{` and the beginning of the macro name, to see a list of suggested macros. In this example we’re inserting the cheese macro.

![Macro suggestions](image)

**To edit an existing macro:** Click the macro placeholder and choose **Edit**. This will open the macro details, so you can edit the macro parameters.

![Edit Remove](image)

---

**Editing your Roadmap**

**To edit your roadmap:**

- Select the roadmap and choose **Edit**.
- **Add** lanes, bars and markers.
- Drag lanes, bars and markers to the desired location on the roadmap.
- Select lanes, bars and markers to add text, change colors and remove from the roadmap.
- Select bars to add links to existing pages, create new pages or add a description.
- Set the start and end dates for the roadmap and choose to display it by weeks or months.

Here’s how the roadmap planner appears in the editor:

![Roadmap planner](image)

1. **Add lanes:** to differentiate your teams or streams of work.
2. **Date range:** display the plan by weeks or months.
3. **Add bar info:** to provide more info or link a bar to a page.

---

**Parameters**

This macro does not use the macro browser to set parameters. You also cannot add this macro via wiki markup or by editing the storage format directly.

---

**Notes**

The Roadmap macro was previously available from **The Marketplace**. The macro has changed significantly. If you had an older version of the macro installed you will be able to view your existing roadmaps but not edit them.
RSS Feed Macro

The RSS Feed macro embeds an RSS feed on a page. It can display the contents of external feeds, or of internal feeds generated by Confluence. To display blog posts or to list recently updated pages in a space, use the Feed Builder to create an internal feed, then render it using this macro.

CAUTION: Including unknown HTML inside a webpage is dangerous.
HTML inside an RSS feed can contain active scripting components. This means that it would be possible for a malicious attacker to present a user of your site with script that their web browser would believe came from you. Such code could be used, for example, to steal a user’s authentication cookie and give the attacker their Confluence login password.

The RSS Feed macro may be disabled by your Confluence administrator. Also, your Confluence administrator can define a whitelist of trusted URLs. You will see an error message on the Confluence page, if the included URL is not in the whitelist.

Using the RSS Feed macro

To add the RSS Feed macro to a page:

1. From the editor toolbar, choose Insert
   > Other Macros
   2. Find and select the required macro

Speed it up with autocomplete: Type { and the beginning of the macro name, to see a list of suggested macros. In this example we’re inserting the cheese macro.

To edit an existing macro: Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.

Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>RSS Feed URL</td>
<td>none</td>
<td>The URL of the RSS feed link you want to show.</td>
</tr>
</tbody>
</table>
### Maximum Number of Entries

<table>
<thead>
<tr>
<th><strong>Maximum Number of Entries</strong> (max)</th>
<th>15</th>
<th>Limit the number of entries displayed.</th>
</tr>
</thead>
</table>

### Show Item Titles Only

<table>
<thead>
<tr>
<th><strong>Show Item Titles Only</strong> (showTitlesOnly)</th>
<th>false</th>
<th>Show only the titles of the news items, not the content.</th>
</tr>
</thead>
</table>

### Show Name/Title of RSS Feed

<table>
<thead>
<tr>
<th><strong>Show Name/Title of RSS Feed</strong> (titleBar)</th>
<th>true</th>
<th>Hide the feeds title bar.</th>
</tr>
</thead>
</table>

### How up to date is the feed?

By default, the RSS Feed macro caches the feed results for 60 minutes before fetching the data again.

If you wish to change the default caching, use the Cache macro to define how often the RSS Feed macro fetches the feed updates. You will need to install the Cache plugin onto your Confluence site.

### What happens to a page containing a disallowed URL?

Your Confluence Administrator can set up a whitelist of allowed URLs. If this is the case, you may see an error on the pages which contain the RSS Feed macro.

A user can add the RSS Feed macro or the HTML-include macro to a Confluence page. The macro code includes a URL from which the content is drawn. When the page is displayed, Confluence will check the URL against the whitelist. If the URL is not allowed, Confluence will display an error message on the page.

The error message says that Confluence "could not access the content at the URL because it is not from an allowed source" and displays the offending URL. If the person viewing the page is a Confluence Administrator, they will also see a link to the Administration page where they can configure the URL whitelist.

Here is an example of the error message, including the link shown only to Confluence Administrators:

```markdown
Could not access the content at the URL because it is not from an allowed source.
http://feeds.wordpress.com
Configure whitelist >>
```

Here is an example of the error message, but without the link.

```markdown
Could not access the content at the URL because it is not from an allowed source.
http://feeds.wordpress.com
You may contact your site administrator and request that this URL be added to the list of allowed sources.
```

### Authentication

**Private feeds from external sites**

RSS feeds which require authentication cannot be accessed using the RSS Feed macro.

**Accessing internal HTTPS feeds**

This applies only to Confluence instances which have enabled HTTPS for all content. If your site is fully HTTPS, the RSS Feed macro cannot access internal feeds. To enable the RSS Feed macro to access internal feeds without affecting your HTTPS setup, enable local-only HTTP access:

1. Shut down Confluence.
2. Consult the SSL guide to enable HTTP access to Confluence. You'll want to ensure that you have an HTTP connector and an SSL connector, both commented in. This means that Confluence will be

Created in 2019 by Atlassian. Licensed under a Creative Commons Attribution 2.5 Australia License.
accessible via both HTTP and HTTPS. However, you should not have a redirect port, nor rules in web.xml to redirect all traffic.

3. Instead of using web.xml to redirect traffic, insert a firewall rule to redirect all HTTP requests not from the Confluence server to the equivalent HTTPS URL. This ensures that users will only be able to access Confluence via HTTPS, as intended. If you have still left HTTP access for attachments enabled (to avoid the IE download bug) you must selectively enable those URLs as well.

4. Modify your Confluence RSS Feed macro feed link to use the HTTP URL, and restart Confluence.

Enabling the RSS Feed macro

The RSS Feed macro is disabled by default.

To enable the RSS Feed macro:

1. Go to

   > Manage apps.

2. Select System from the drop down and search for the Confluence HTML Macros system app.

3. Expand the listing and enable the rss (rss-xhtml) module.

Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** rss

**Macro body:** None.

```
{rss:max=10|showTitlesOnly=true|url=http://myblog.com/feed|titleBar=false}
```

Search Results Macro

The Search Results macro searches your Confluence site based on search terms specified in the macro parameters, and displays the results on the wiki page.

Using the Search Results macro

**To add the Search Results macro to a page:**

1. From the editor toolbar, choose Insert

   > Other Macros

2. Find and select the required macro

**Speed it up with autocomplete:** Type { and the beginning of the macro name, to see a list of suggested macros. In this example we’re inserting the cheese macro.

To edit an existing macro: Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.
Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Search Terms (query)</td>
<td>none</td>
<td>The search terms which this macro will use to generate its results.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>You can refine your search query by using operators such as 'AND' and 'OR'.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>For example: my_query1 AND my_query2</td>
</tr>
<tr>
<td></td>
<td></td>
<td>For more information, take a look at the documentation on the Confluence</td>
</tr>

<td>all</td>
<td>Specify the content type. The content types are: page, comment, blogpost,</td>
</tr>
<tr>
<td></td>
<td></td>
<td>attachment, userinfo (the content of user profiles only) and spacedesc (the</td>
</tr>
<tr>
<td></td>
<td></td>
<td>content of space descriptions only).</td>
</tr>
</tbody>
</table>
**Last Modified**

*

**Restrict to this Username**

### Notes

**Permissions:** When a user views the page containing the Search Results macro, the search results will show only pages and other content types for which the user has 'View' permission.

**Wiki markup example**

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** search

**Macro body:** None.

```
{search:lastModified=3w|query=choc|contributor=admin|maxLimit=10|type=page|spacekey=ds}
```

### Section Macro

Used with the Column macro to define columns on a page. See [Working with page layouts and columns and sections](#).

**Wiki markup example**
This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** `section`

**Macro body:** Rich text, consisting of one or more Column macros.

```
{section:border=true}
{column:width=100px}
This is the content of *column 1*.
{column}
This is the content of *column 2*.
{column}
{section}
```

**Space Attachments Macro**

The Space Attachments macro displays a list of all files attached to pages in a space. It shows details of the file and includes a link to the page a file is attached to.

Filters allow you to show only files with a particular label or file extension.

**Screenshot: The Space Attachments macro**

</table>
```

**Using the Space Attachments macro**

**To add the Space Attachments macro to a page:**

1. From the editor toolbar, choose **Insert**

   > **Other Macros**

2. Find and select the required macro

**Speed it up with autocomplete:** Type `{ and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.
To edit an existing macro: Click the macro placeholder and choose **Edit**. This will open the macro details, so you can edit the macro parameters.

Parameters

The Space Attachments macro displays a list of all the attachments in a space. You can choose to show attachments from the current space, or another space.

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Space</td>
<td>(none)</td>
<td>Selects the Confluence space to display attachments for. If you do not specify a space, the current space will be used.</td>
</tr>
<tr>
<td>Show Filter Controls</td>
<td>true</td>
<td>Determines whether or not the filter panel is shown. If you select this option, people viewing the page will be able to filter the list of attachments by file type (extension) and by label.</td>
</tr>
</tbody>
</table>

*Wiki markup example*

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** space-attachments

**Macro body:** None.

```
{space-attachments:showFilter=false|space=ds}
```

Space Details Macro

The Space Details macro displays the details of a Confluence space, including the space name, description, and more.

Using the Space Details macro

**To add the Space Details macro to a page:**

1. From the editor toolbar, choose **Insert**
   ```
   +
   > Other Macros
   ```
2. Find and select the required macro

**Speed it up with autocomplete:** Type `{` and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.

![Macro suggestions](image)

**To edit an existing macro:** Click the macro placeholder and choose **Edit**. This will open the macro details, so you can edit the macro parameters.

![Edit](image)

## Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Width of Table</strong></td>
<td><strong>100%</strong></td>
<td>The width of the space details table, specified as a percentage (%) of the page width.</td>
</tr>
</tbody>
</table>

### Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** space-details

**Macro body:** None.

```
{space-details:width=50%}
```

## Spaces List Macro

Use the Spaces List macro to display a list of spaces on a page.

### Using the Spaces List macro

**To add the Spaces List macro to a page:**

1. From the editor toolbar, choose **Insert**
   
   ![Insert](image)

   > **Other Macros**

2. Find and select the required macro

**Speed it up with autocomplete:** Type `{` and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.
To edit an existing macro: Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.

Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Required?</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Scope of spaces</td>
<td>no</td>
<td>all</td>
<td>The view from which spaces are listed. Available options are:</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>• (blank) - All spaces in your site, with tabs.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>• all – All spaces in your Confluence site.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>• category – Spaces grouped according to space categories.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>• favorite – Spaces which you have added to My Spaces.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>• new – spaces created within the last 7 days.</td>
</tr>
<tr>
<td>Width of List (width)</td>
<td>no</td>
<td>100%</td>
<td>The width of the spaces list, specified as a percentage (%) of the window width.</td>
</tr>
</tbody>
</table>

Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

Macro name: spaces

Macro body: None.

{spaces:favourite|width=80%}
Status Macro

The Status macro displays a colored lozenge (a rounded box) that is useful for reporting project status. You can choose the color of the lozenge and the text that appears inside the lozenge. The macro also displays its current status in the editor, and you can change the status directly in the editor.

Screenshot: Click on the Status macro lozenge to change the status.

Using the Status macro

To add the Status macro to a page using the Macro Browser:

1. From the editor toolbar, choose Insert
   > Other Macros
2. Find and select the required macro

Speed it up with autocomplete: Type { and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.

To edit an existing macro: Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.

Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter (colour)</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Color (colour)</td>
<td>Grey</td>
<td>The color of the lozenge. The following colors are available: Grey, Red, Yellow, Green and Blue.</td>
</tr>
<tr>
<td>Title (title)</td>
<td>The color that you select. The text that will appear inside the lozenge. If you do not specify any text, the title will be the color of the lozenge, that is 'Grey', 'Red', 'Yellow', 'Green' or 'Blue'.</td>
<td></td>
</tr>
</tbody>
</table>

See the Status macro put to excellent use in How to build a release planning page in Confluence.
| Use outline style (subtle) | False | The style of the lozenge and its border. The default style lozenge is a solid background color with white text. The outline style lozenge is white with a colored border and colored text as shown here |

 Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** status  

**Macro body:** None.

```
{status:colour=Green|title=On track|subtle=true}
```

Do more with Confluence

For more customizable status macros check out these apps on the Atlassian Marketplace:

- **Build Status Tracker for Confluence:** Provide visibility on build status from Bamboo or Jenkins on your Confluence pages  
- **Spectrum Formatting Macros:** Show a page status as a draft, as outdated, as action required or as official

Table of Contents Macro

The Table of Contents macro scans the headings on the current Confluence page to create a table of contents based on those headings. This helps readers find their way around lengthy pages, by summarizing the content structure and providing links to headings.

**Using the Table of Contents macro**

**Hint:** For quick access from the editor toolbar, choose Insert > Table of Contents.

**To add the Table of Contents macro to a page:**

1. From the editor toolbar, choose Insert  
   > Other Macros  
2. Find and select the required macro

**Speed it up with autocomplete:** Type `{ and the beginning of the macro name, to see a list of suggested macros. In this example we’re inserting the cheese macro.

Want to see the Table of Contents macro in action? Check out how it’s used in Creating insightful customer interview pages.

To edit an existing macro: Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.
Macro parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
</table>
| **Output Type** (type) | list    | - list — produces a typical list-type table of contents.  
|                        |         | - flat — produces a horizontal menu-type series of links. |
| **Display Section Numbering** (outline) | clear | Select the check box to apply outline numbering to your headings, for example: 1.1, 1.2, 1.3. |
| **List Style** (style) | disc    | Select the style of bullet point for each list item. You can use any valid CSS style. For example:  
|                        |         | - none — no list style is displayed  
|                        |         | - circle — the list style is a circle  
|                        |         | - disc — the list style is a filled circle. This is the typical bullet list, and is used for this example list.  
|                        |         | - square — the list style is a square  
|                        |         | - decimal — the list is numbered (1, 2, 3, 4, 5)  
|                        |         | - lower-alpha — the list is lower-case, alphabetized (a, b, c, d, e)  
|                        |         | - lower-roman — the list style is lower roman numerals (i, ii, iii, iv, v, vi)  
|                        |         | - upper-roman — the list style is upper roman numerals (I, II, III, IV, V, VI) |
| **Heading Indent** (indent) |         | Sets the indent for a list according to CSS quantities. Entering 10px will successively indent heading groups by 10px. For example, level 1 headings will be indented 10px and level 2 headings will be indented an additional 10px. |
| **Separator** (separator) | brackets | This parameter applies to flat lists only. You can enter any of the following values:  
|                        |         | - brackets — Each item is enclosed by square brackets: [ ].  
|                        |         | - braces — Each item is enclosed by braces: { }.  
|                        |         | - parens — Each item is enclosed by parentheses: ( ).  
|                        |         | - pipe — Each item is separated by a pipe:  
|                        |         | - anything — Each item is separated by the value you enter. You can enter any text as a separator, for example "***". If using a custom separator, be aware that text displays exactly as entered, with no additional white space to further separate the characters. |
| **Minimum Heading Level** (minLevel) | 1 | Select the highest heading level to start your TOC list. For example, entering 2 will include levels 2, and lower, headings, but will not include level 1 headings. |
| **Maximum Heading Level** (maxLevel) | 7 | Select the lowest heading level to include. For example, entering 2 will include levels 1 and 2, but will not include level 3 headings and below. |
| **Include Headings** (include) | Filter headings to include according to specific criteria. You can use wildcard characters. See [Sun's Regex documentation](#) for examples of constructing regular expression strings. |
Exclude Headings (exclude) | Filter headings to exclude according to specific criteria. You can use wildcard characters. See Sun's Regex documentation for examples of constructing regular expression strings.

Printable (printable) | checked | By default, the TOC is set to print. If you clear the check box, the TOC will not be visible when you print the page.

CSS Class Name (class) | If you have custom TOC styles in your CSS style sheet, use this parameter to output the TOC inside `<div>` tags with the specified class attribute.

Absolute URL (absoluteUrl) | By default, the links in the TOC are relative URLs pointing to the current page. If checked, the links in the TOC will be full URLs. This setting is useful when you are including a page with a Table of Contents in another page, and want to control where the links should take the user.

Examples

The examples below are based on this table of contents:

- Places
  - Favourite Places
  - Unknown Places
- Foods
  - Favourite Foods
  - Unknown Foods
- Things
  - Favourite Foods
  - Unknown Foods

Filtered Table of Contents

This example filters the headings to include those that contain 'Favorite', but excludes headings which end with 'Things'. The list is styled with Roman numerals.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>List Style</td>
<td>upper-roman</td>
</tr>
<tr>
<td>Include Headings</td>
<td>Favourite.*</td>
</tr>
<tr>
<td>Exclude Headings</td>
<td>.*Things</td>
</tr>
</tbody>
</table>

The resulting table of contents is:

I. Favourite Places
II. Favourite Foods

Flat List

This example filters all headings to render a flat list of 'Unknowns' enclosed in square brackets (the default list style).
### Parameter

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Output Type</td>
<td>flat</td>
</tr>
<tr>
<td>Maximum Heading Level</td>
<td>2</td>
</tr>
<tr>
<td>Include Headings</td>
<td>Unknown.*</td>
</tr>
</tbody>
</table>

The resulting table of contents is:

```
[ Unknown Places ] [ Unknown Foods ] [ Unknown Foods ]
```

**Wiki markup example**

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** toc

**Macro body:** None.

This example shows a list-type table of contents.

```
{toc:printable=true|style=square|maxLevel=2|indent=5px|minLevel=2|class=bigpink|exclude=[1//2]|type=list|outline=true|include=.*}
```

This example shows a flat table of contents.

```
{toc:printable=true|maxLevel=2|minLevel=2|class=bigpink|exclude=[1//2]|type=flat|outline=true|separator=pipe|include=.*}
```

**Notes**

- When you use a Table of Contents macro in a **template**, you will see an error when you preview the template itself. But the Table of Contents macro works on the pages that people create from the template – the table of contents shows up after they have saved the page. (This is probably because the template is not defined as a page, and the Table of Contents macro works for pages only.)

- The Table of Contents macro only displays page or blog post content. You can't use it to add a table of contents of headings in a comment for example.

- Due to an outstanding issue in the Table of Contents macro (CONF-10619), the macro browser's **Refresh** function does not render any parameter modifications. Currently, the rendering of parameter value modifications to the Table of Contents macro occurs only after the page is saved.

- **Using HTML heading markup with the Table of Contents macro**
The Table of Contents macro cannot handle HTML heading markup on its own. Hence, if you use the HTML and HTML Include macros to render HTML heading markup in a Confluence page, the Table of Contents macro will not create a contents list out of these headings. However, if you insert an HTML anchor into each HTML heading on your page (based on the following syntax), the Table of Contents macro will incorporate these headings into your contents list.

```
<h2><a name="pagename-headingname"></a>Heading Name</h2>
```

The syntax for the anchor name is the page name and heading name separated by a hyphen. Remove all spaces and convert all text to lower case. Convert all punctuation marks to their URL-encoded equivalent.
Table of Content Zone Macro

You can use the Table of Content Zone macro to mark out a section (zone) within the page from which to create a table of contents. You can style the headings as a flat list, and place the list of links at the top and bottom of the section or page, to provide navigation bars similar to web navigation.

Using the Table of Content Zone macro

To add the Table of Content Zone macro to a page:

1. From the editor toolbar, choose Insert
   > Other Macros
2. Find and select the required macro

Speed it up with autocomplete: Type `{` and the beginning of the macro name, to see a list of suggested macros. In this example we’re inserting the cheese macro.

To edit an existing macro: Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.

Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>location (location)</td>
<td>both</td>
<td>Specifies where in the zone the output list is displayed: top, bottom, or both, which encloses the page zone content.</td>
</tr>
</tbody>
</table>
| **Output Type (type)** | list | Specifies the layout for the table of contents:  
| | | • **list** – produces a vertical list, typical of a TOC.  
| | | • **flat** – produces a horizontal menu-type series of links, for example: [Heading 1] [Heading 2] [Heading 3].  
| **Display Section Numbering (outline)** | false | Select to apply outline numbering to your headings, for example: 1.1, 1.2, 1.3.  
| **List Style (style)** | none | Specifies the style of bullet point for each list item. You can use any valid CSS style. For example:  
| | | • **none** — no list style is displayed  
| | | • **circle** — the list style is a circle  
| | | • **disc** — the list style is a filled circle. This is the typical bullet list, and is the one we’re using for this example list  
| | | • **square** — the list style is a square  
| | | • **decimal** — the list is numbered (1, 2, 3, 4, 5)  
| | | • **lower-alpha** — the list is lower-case, alphabetized (a, b, c, d, e)  
| | | • **lower-roman** — the list style is lower roman numerals (i, ii, iii, iv, v, vi)  
| | | • **upper-roman** — the list style is upper roman numerals (I, II, III, IV, V, VI)  
<p>| <strong>Heading Indent (indent)</strong> | | Sets the indent for a list output type, according to CSS quantities. Entering &quot;10px&quot; will successively indent list heading levels by 10px. For example, h1 headings will be indented 10px and h2 headings will be indented an additional 10px. |</p>
<table>
<thead>
<tr>
<th>Feature</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Separator (separator)</td>
<td>brackets</td>
<td>Only applies to the flat output type. Specifies the display style of the links. You can enter any of the following values:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <strong>brackets</strong> — Each item is enclosed by square brackets: <code>[ ]</code>.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <strong>braces</strong> — Each item is enclosed by braces: <code>{ }</code>.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <strong>parens</strong> — Each item is enclosed by parentheses: <code>( )</code>.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <strong>pipe</strong> — Each item is separated by a pipe:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <strong>anything</strong> — Each is separated by the value you enter. You can enter any text as a separator, for example <code>***</code>. If using a custom separator, be aware that text displays exactly as entered, with no additional white space to further separate the characters.</td>
</tr>
<tr>
<td>Minimum Heading Level (minLevel)</td>
<td>1</td>
<td>Select the largest heading level to start your TOC list. For example, 2 will list h2, h3, and h4 headings, but will not include h1 headings.</td>
</tr>
<tr>
<td>Max Heading Level (maxLevel)</td>
<td>7</td>
<td>Select the smallest heading level to include in the TOC. For example, 2 will list h1 and h2, but will not include h3 and below.</td>
</tr>
<tr>
<td>Include Headings (include)</td>
<td></td>
<td>Filter the included headings according to specific criteria. You can use wildcard characters. See Sun's Regex documentation for examples of constructing regular expression strings.</td>
</tr>
<tr>
<td>Exclude Headings (exclude)</td>
<td></td>
<td>Exclude headings according to specific criteria. You can use wildcard characters. See Sun's Regex documentation for examples of constructing regular expression strings.</td>
</tr>
<tr>
<td>Printable (printable)</td>
<td>true</td>
<td>By default, the TOC is set to print. If you clear this parameter, the TOC will not be visible when you print the page.</td>
</tr>
<tr>
<td>CSS Class Name (class)</td>
<td></td>
<td>If you have a custom TOC in your CSS style sheet, you can use this parameter to output the TOC with the specified &quot;class&quot; attribute.</td>
</tr>
</tbody>
</table>

Examples
The examples are based on a page with the following headings:

- Places
  - Favourite Places
  - Unknown Places
- Foods
  - Favourite Foods
  - Unknown Foods
- Things
  - Favourite Foods
  - Unknown Foods

**Filtered Table of Contents**

This example will filter all headings to include those that contain "Favorite", but will exclude any heading which ends with the word "Things". The list is styled with upper-case Roman numerals.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Output Type</td>
<td>list</td>
</tr>
<tr>
<td>List Style</td>
<td>upper-roman</td>
</tr>
<tr>
<td>Include Headings</td>
<td>Favourite.*</td>
</tr>
<tr>
<td>Exclude Headings</td>
<td>.*Things</td>
</tr>
</tbody>
</table>

**Screenshot: Filtered TOC 'zone' headings**

I. Favourite Places
II. Favourite Foods

**Flat List**

This example will filter all headings to render a flat list of "Unknowns" enclosed in square brackets.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Output Type</td>
<td>flat</td>
</tr>
<tr>
<td>Separator</td>
<td>brackets</td>
</tr>
<tr>
<td>Max Heading Level</td>
<td>2</td>
</tr>
<tr>
<td>Include Headings</td>
<td>Unknown.*</td>
</tr>
</tbody>
</table>

**Screenshot: Filtered TOC 'zone' headings displayed as a flat list**

[ Unknown Places ] [ Unknown Foods ] [ Unknown Foods ]

**Wiki markup example**

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** toc-zone

**Macro body:** Accepts rich text.
Notes

- Due to an outstanding issue in the Table of Content Zone macro (CONF-10619), the Macro Browser’s Ref refresh function does not render any parameter modifications. Currently, the rendering of parameter value modifications to the Table of Content Zone macro occurs only after the page is saved.
- Using HTML heading markup with the Table of Content Zone macro — The Table of Content Zone macro cannot handle HTML heading markup on its own. Hence, if you used the HTML and HTML Include macros to render HTML heading markup in a Confluence page, the Table of Content Zone macro will not create a contents list out of these headings. (For more information on about this issue, please refer to TOC-93.)

However, if you insert an HTML anchor into each HTML heading on your page (based on the following syntax), the Table of Content Zone macro will incorporate these headings into your contents list.

\[<h2><a name="pagename-headingname"></a>Heading Name</h2>\]

The syntax for the anchor name is the page name and heading name separated by a hyphen. Remove all spaces and convert all text to lower case. Convert all punctuation marks to their URL-encoded equivalent.

Task Report Macro

Use the Task Report macro to display a list of tasks on a page. Filter the tasks by space, page, user, label, created date and more.

See Add, Assign, and View Tasks for more information on creating and assigning tasks. You can also use the Task Report blueprint, which will create a page and add this macro for you.

Using the Task Report macro

To add the Content Report Table macro to a page:

1. From the editor toolbar, choose Insert
   - > Other Macros
2. Find and select the required macro

Speed it up with autocomplete: Type \{ and the beginning of the macro name, to see a list of suggested macros. In this example we’re inserting the cheese macro.

To edit an existing macro: Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.
**Task Report macro showing incomplete tasks, on pages with the label 'meeting-notes'.**

![Task Report macro example](image)

### Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets *(example)*.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Required</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Space(s) and Page(s)</strong> (spaceAndPage)</td>
<td>No</td>
<td>None</td>
<td>Filter by the task location. The macro will only display tasks in the pages or spaces specified. You can enter a combination of spaces and pages.</td>
</tr>
<tr>
<td><strong>Label(s)</strong> (labels)</td>
<td>No</td>
<td>None</td>
<td>Filter by Label. The macro will only display tasks on pages with at least one of the specified labels (for example, 'label-a' OR 'label-b'). Enter multiple labels, separated by a comma.</td>
</tr>
<tr>
<td><strong>Assigned to</strong> (assignee)</td>
<td>No</td>
<td>None</td>
<td>Filter by Assignee. The macro will only display tasks assigned to the users specified.</td>
</tr>
<tr>
<td><strong>Created by</strong> (creator)</td>
<td>No</td>
<td>None</td>
<td>Filter by Creator. The macro will only display tasks created by the users specified.</td>
</tr>
<tr>
<td><strong>Created after</strong> (createddateFrom)</td>
<td>No</td>
<td>None</td>
<td>Filter by created date. The macro will only display tasks created on or after the date specified. Date must be entered as <code>dd-mm-yyyy</code>.</td>
</tr>
<tr>
<td><strong>Task status</strong> (status)</td>
<td>Yes</td>
<td>Incomplete</td>
<td>Show complete or incomplete tasks.</td>
</tr>
<tr>
<td><strong>Number of tasks to display</strong> (pageSize)</td>
<td>No</td>
<td>20</td>
<td>The number of tasks to display on each page of results in the table. Choose from 10, 20 or 40.</td>
</tr>
<tr>
<td>Display columns (columns)</td>
<td>No</td>
<td>description,duedate,assignee,location</td>
<td>Columns to include in the table. Available columns include description, duedate, assignee, location, completedate and labels.</td>
</tr>
<tr>
<td>--------------------------</td>
<td>----</td>
<td>----------------------------------------</td>
<td>----------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Sort by (sortBy)</td>
<td>No</td>
<td>Due date</td>
<td>Sort tasks by due date, assignee or page title. Select the Reverse Sort check box to sort the table in reverse order.</td>
</tr>
</tbody>
</table>

**Wiki markup**

Wiki markup is not available for this macro. You cannot add this macro via wiki markup.

**User List Macro**

The User List macro displays a list of Confluence users, based on their group membership. The macro can also indicate when users are online or offline.

The User List macro can be quite memory hungry in sites with lots of users. To prevent it causing out of memory errors in your site, we don’t show this macro if there are more than 10,000 people in the groups specified. Your administrator can change this limit using the `confluence.extra.userlister.limit` system property.

Using the User List macro

**To add the User List macro to a page:**

1. From the editor toolbar, choose Insert
   + > Other Macros
2. Find and select the required macro

**Speed it up with autocomplete:** Type `{` and the beginning of the macro name, to see a list of suggested macros. In this example we’re inserting the cheese macro.

```
<table>
<thead>
<tr>
<th>cheese</th>
</tr>
</thead>
<tbody>
<tr>
<td>Macro suggestions</td>
</tr>
<tr>
<td>Cheese</td>
</tr>
<tr>
<td>Open macro browser</td>
</tr>
</tbody>
</table>
```

**To edit an existing macro:** Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.

**Parameters**

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Group(s) (groups)</td>
<td>none</td>
<td>Specify the group name. Specify multiple groups separated by a comma, or use * to show all users in Confluence. See this knowledge base page for more information about controlling which users can see the details of other users.</td>
</tr>
<tr>
<td>Display Online/Offline Users (online)</td>
<td>All registered users</td>
<td>List online or offline users. Leave blank to show all users, irrespective of status. Accepted values: • Unspecified – The macro will show all registered users. • true – The macro will show only online users. • false – The macro will show only offline users. See below for information on how to configure this macro to display online / offline users.</td>
</tr>
</tbody>
</table>

Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** userlister

**Macro body:** None.

```
{userlister:groups=confluence-users|online=false}
```

Configuring the User List macro

In order to use the Display Online / Offline Users parameter to indicate whether users are currently logged in to Confluence, you will need to enable the User Log In Listener component in the system app that provides this macro. You'll need Confluence Administrator permissions to do this.

**To enable the Display Online/Offline Users filter in the User List macro:**

1. Go to ![Manage apps](https://confluence.atlassian.com/icons/2x/edit.png)
   > Manage apps
2. Select System from the drop down and search for User List
3. Expand the listing and enable the User Log In Listener module.
4. Restart Confluence for the change to take effect.

User Profile Macro

The User Profile macro displays a short summary of a given Confluence user’s profile. This is the same summary that appears in a Hover Profile, which appears whenever you mouse over a user’s name in the Confluence interface.
Using the User Profile macro

To add the User Profile macro to a page:

1. From the editor toolbar, choose Insert
   
   > Other Macros

2. Find and select the required macro

Speed it up with autocomplete: Type `{` and the beginning of the macro name, to see a list of suggested macros. In this example we’re inserting the cheese macro.

To edit an existing macro: Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.

Parameters

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Username</strong>&lt;br&gt;(user)</td>
<td>none</td>
<td>The username of the Confluence user whose profile summary you wish to show.</td>
</tr>
</tbody>
</table>

Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** profile

**Macro body:** None.

```{profile:user=admin}```
View File Macro

The View File macros allow you to embed an Office or PDF document on a page. First attach the document to a page and then use one of the View File macros to display the document's content.

When people view the page, they will see the content of the Office or PDF document. They do not need to have Office installed in order to see the content of the file.

Displaying an Office or PDF Document in Confluence

To display an Office or PDF document in a page, use one of the following View File macros in the macro browser:

- Office Excel
- Office PowerPoint
- Office Word
- PDF

To add one of the View File macros to a page:

1. From the editor toolbar, choose Insert
   > Other Macros
2. Find and select the required macro

Speed it up with autocomplete: Type { and the beginning of the macro name, to see a list of suggested macros. In this example we're inserting the cheese macro.

To edit an existing macro: Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.

Parameters for the Office and PDF macros

Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Macro</th>
<th>Parameter</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>All View File macros</td>
<td>Page Name</td>
<td>The page which contains the macro</td>
<td>Enter a page name, if you wish to display a document which is attached to another Confluence page.</td>
</tr>
<tr>
<td><strong>File Name</strong></td>
<td>none</td>
<td>The file name of the Office or PDF document to be displayed. The document must be attached to a page on your Confluence site.</td>
<td></td>
</tr>
<tr>
<td>--------------</td>
<td>------</td>
<td>----------------------------------------------------------------------------------------------------------------------------------</td>
<td></td>
</tr>
<tr>
<td><strong>Office Excel</strong></td>
<td><strong>Show Grid?</strong></td>
<td>true</td>
<td>Select to show grid lines around each cell of the Excel spreadsheet. Clear to hide these grid lines.</td>
</tr>
<tr>
<td><strong>Worksheet Name</strong></td>
<td>Last worksheet viewed in the spreadsheet</td>
<td>The name of the worksheet that you want displayed.</td>
<td></td>
</tr>
<tr>
<td><strong>Last Row</strong></td>
<td>Last row with content</td>
<td>The number of the last row you want displayed, starting from '0' as the first row.</td>
<td></td>
</tr>
<tr>
<td><strong>Last Column</strong></td>
<td>Last column with content</td>
<td>The number of the last column you want displayed, starting from '0' as the first column.</td>
<td></td>
</tr>
</tbody>
</table>

**Hint for reducing the size of the spreadsheet:** Use the Last Column and Last Row parameters to reduce the size of the spreadsheet displayed on the wiki page. This is especially useful to prevent the display from showing empty cells. This will also help to prevent 'out of memory' errors.

<table>
<thead>
<tr>
<th><strong>Office PowerPoint</strong></th>
<th><strong>Height</strong></th>
<th>Specify the height of the display, in pixels (default) or as a percentage of the window's height.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Slide Number</strong></td>
<td>none</td>
<td>Specify the number of the slide that you want displayed on the Confluence page, where the first slide is numbered zero. Instead of a slide show, the page will display just the single slide, represented as a JPEG image. If not specified, all slides display as a slideshow.</td>
</tr>
<tr>
<td><strong>Width</strong></td>
<td></td>
<td>Specify the width of the display, in pixels (default) or as a percentage of the window's width.</td>
</tr>
</tbody>
</table>
Editing a document

You can edit files embedded with the View File macro using your preferred desktop application, then save the file back to Confluence automatically. Head to Edit files for instructions.

- **Word and Excel** – choose the Edit button above the content.
- **PowerPoint and PDF** – choose the edit icon on the viewer.

Importing content from Word documents

If you want to use the contents of your Word document to create a Confluence page, see Import a Word Document into Confluence.

**Widget Connector Macro**

Embed online videos, slideshows, photostreams and more directly into your page with the Widget Connector macro.

The macro currently supports content from these sites:

- YouTube
- Vimeo
- MySpace Video
- Flickr
- Twitter
- Slide Rocket
- Google Calendar

Using the Widget Connector

**To add the Widget Connector to a page:**

1. From the editor toolbar, choose Insert > Other Macros
2. Find and select the required macro

**Speed it up with autocomplete:** Type `{` and the beginning of the macro name, to see a list of suggested macros. In this example we’re inserting the cheese macro.

**To edit an existing macro:** Click the macro placeholder and choose Edit. This will open the macro details, so you can edit the macro parameters.

Parameters
Parameters are options that you can set to control the content or format of the macro output. Where the parameter name used in Confluence storage format or wikimarkup is different to the label used in the macro browser, it will be listed below in brackets (example).

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Web Site's Widget URL (url)</td>
<td>This is the external site’s URL. In some sites this will be the URL shown in the address bar of your browser, and in other sites you may need to click a Share or Link button to get the URL.</td>
</tr>
<tr>
<td>Pixel Height (Value Only) (height)</td>
<td>The height of the display, in pixels.</td>
</tr>
<tr>
<td>Pixel Width (Value Only) (width)</td>
<td>The width of the display, in pixels.</td>
</tr>
</tbody>
</table>

Examples

Every site is a little different, so we’ve put together some info on what you’ll need to do to embed each site’s content on a page.

YouTube

The fastest way to embed a YouTube video is to paste the URL into the editor. Confluence will autoconvert the link and insert the macro for you, like magic. Autoconvert works with both long and short YouTube URLs.

If you’re pasting the URL into the Widget Connector macro URL field manually, you’ll need to use the long URL (from the address bar). Long URLs look something like this https://www.youtube.com/watch?v=k6lK5hlB1nQ.

- If you’re not able to see the video in some browsers, try using https rather than http in your link.
- Links that contain a parameter to start a video at a particular time won’t autoconvert or work in the Widget Connector macro, like this link: https://www.youtube.com/watch?v=LhHKkdOPFc. Paste in the short sharing URL to be sure it works.
Vimeo

The fastest way to embed a Vimeo video is to paste the URL into the editor. Confluence will autoconvert the link and insert the macro for you.

You can use the URL from the address bar in your browser or the Share button in Vimeo.

MySpace Video

We don't autoconvert MySpace videos, so you'll need to add the Widget Connector macro to your page first, and then paste the video's URL into the URL field.

You can use the URL from the address bar in your browser or the Sharing options in MySpace.

Flickr

You can embed a single photo, a set, an entire user's photo stream or collection of photos with a particular tag.

The fastest way is to paste a URL into the editor. This works for sets and tags. For other URLs you'll need to add the Widget Connector macro to the page first and then paste your link into the URL field.

Use the URL from the address bar in your browser.

Twitter

To embed a single tweet you'll need to click the Copy link to tweet link on the tweet. The URL will look something like https://twitter.com/atlassian/status/346976521250037760.
You can't currently embed a list of tweets, as Twitter has changed the way their widgets work.

A workaround for displaying a list of tweets is to enable the HTML Macro, and then use https://publish.twitter.com/ to generate the embed code.

SlideRocket

We don't autoconvert SlideRocket presentations, so you'll need to add the Widget Connector macro to your page first, and then paste the video's URL into the URL field.

You can get the URL from the Sharing button on the SlideRocket player.

Google Calendar

We don't autoconvert Google Calendars, so you'll need to add the Widget Connector macro to your page first, and then paste the calendar address into the URL field.

You can only embed public calendars. To get your calendar's URL, in Google Calendar go to Calendar Settings > Calendar Address and click the HTML button.

The URL will look something like this: https://www.google.com/calendar/embed?src=en.australian%23holiday%40group.v.calendar.google.com&ctz=Australia/Sydney

Troubleshooting

If the Widget Connector can't display content from the external site, the macro will look like this:

We rely on the external website's APIs to display content in the Widget Connector macro. APIs do change from time to time and this can cause the Widget Connector macro to stop rendering content.

If you experience problems, you can raise an issue about it to let us know.

Wiki markup example

This example is useful when you want to add a macro outside the editor, for example as custom content in the sidebar, header or footer of a space.

**Macro name:** widget

**Macro body:** None.
Your profile and settings

Confluence is very flexible – not only in the many ways you can create and share content, but also in how you can tailor your own Confluence experience. Things like your profile picture, favorite spaces and pages, and your personal space can say a lot about you, and can also make navigating Confluence much quicker and easier. Even a simple thing like adding shortcut links to the sidebar of your personal space, can save you a lot of time in finding the things you use all the time.

Set up your personal space, and take a look at any of the pages below, to start making Confluence feel like home.

- Your User Profile
- Change Your Password
- Edit Your User Settings
- Set Your Profile Picture
- Choose Your Home Page
- Save for later
- View and Revoke OAuth Access Tokens

Your User Profile

Your user profile contains basic information about you, which other Confluence users can see. It’s also displayed to other users when they click your name in the People Directory, if you haven’t set up your personal space.

In your own profile, you can access account management features and update information about yourself, like your name, email address, and password. You can also view other users’ profiles.

Find your user profile

To find your user profile:

Choose your profile picture at top right of the screen, then choose Profile, or choose the Profile link in the sidebar of your personal space.

To find someone else’s user profile:

Hover your mouse pointer over a user’s linked name or profile picture and choose the user’s linked name to open their user profile. Alternatively, you can choose the Profile link in the sidebar of their personal space, or go directly to this URL:

http://your.confluence.site/users/viewuserprofile.action?username=USERNAME

Screenshot: User profile screen for the current user
From your user profile, you can access the following:

### Profile
- View and edit your personal details, such as your name and email address details and optionally, your photograph and other personal information. Note that as a security precaution, in order to change your email address, you will be required to re-enter your password.
- Upload a profile picture (optional).
- Change your password.

### Network
- View the recent activity of users that you are following via the Network view.
- Follow other users from this view.

### Favorites
- View a list of your favorite spaces.

### Watches
- View a list of the pages and spaces you are currently watching.

### Drafts
- Retrieve any pages you were in the process of editing. See Working with Drafts.

### Settings
- Edit your General Settings (homepage, language and timezone).
- Subscribe to email notifications.
- View and revoke your OAuth access tokens.

### Edit your user profile
1. Choose your profile picture at top right of the screen, then choose **Profile**
   Or, choose the **Profile** link in the sidebar of your personal space.
2. Choose **Edit Profile**.
3. Enter details about yourself in the form displayed.
4. Choose **Save**.

### Fields in your user profile:

<table>
<thead>
<tr>
<th>Detail</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Full Name</td>
<td>Your name as you'd like it to appear in your profile.</td>
</tr>
<tr>
<td>Email</td>
<td>Your email address that will be used to send you mail notifications.</td>
</tr>
<tr>
<td>Phone</td>
<td>Your phone number.</td>
</tr>
</tbody>
</table>
### IM
Your Instant Messenger (IM) details. 
- To suit a variety of IM applications, this option accepts any string value. For example, you can enter IM details in the form of an email address, or a user ID, like '123456789'.

### Website
Your website's URL.

### About me
Information about yourself that other users can view (such as your professional information, hobbies, and other interests). You can use Confluence wiki markup in this field.

### Position
Your title or position within your organization.

### Department
The name of your department or team.

### Location
Your location. This can be your town, city, region or country.

---

**Handy Hint**
Confluence administrators can configure Confluence to mask email addresses (e.g. 'example at atlassian dot com'), protecting your email address from search engine spiders and the like.

---

**Notes**
The 'Administer User' link is visible to Confluence administrators only. The administrator can click this link to go directly to the user management screen in the Administration Console.

**Change Your Password**
There are two scenarios where you may want to change your Confluence password:
- You're logged in, but you want or need to change your password
- You've forgotten your password and can't log in, so you need to reset your password

**From within Confluence**
Change your password when you're logged in:

1. Choose your profile picture at top right of the screen, then choose **Profile**
2. On your **Profile** tab, click **Password** in the left-hand column
3. Enter your current password and your new password in the form displayed
4. Click **Submit**

---

**Related Pages:**
- Your User Profile
- Set Your Profile Picture
- Create a Personal Space
1. Location of **Settings** in the profile menu
2. Location of **Password** in the side bar

**From the login page**

If you've forgotten your password and need to reset it, you can do so from the Confluence login page. Choose the ‘Forgot your password?’ link and Confluence will step you through the process to reset your password.

**Don’t see the Password option?**

You may not be able to change your password directly in Confluence if your login credentials are coming from another user directory, for example if Confluence is integrated with an LDAP directory or Jira for user management.

Talk to your administrator about where you should change your password.

**Edit Your User Settings**

If you want to make Confluence fit you, like a well-worn pair of sneakers, you can set some preferences that will make you feel more at home:

- General preferences such as home page, language and time zone
- Editor settings
- Email settings for subscriptions to email reports.
- OAuth access tokens that you have granted from your Confluence user account.

**General User Preferences**

**To edit your general user settings:**

1. Choose your profile picture at top right of the screen, then choose Settings
2. Choose Edit and update the settings
3. Choose Submit

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Site Homepage</strong></td>
<td>Select the page that you would like to see whenever you log into Confluence.</td>
</tr>
<tr>
<td><strong>Language</strong></td>
<td>Select your language. See below.</td>
</tr>
<tr>
<td><strong>Time zone</strong></td>
<td>Select your time zone.</td>
</tr>
<tr>
<td><strong>Use Keyboard Shortcuts</strong></td>
<td>Enable keyboard shortcuts, other than for the editor.</td>
</tr>
</tbody>
</table>
Text select

Turn off the popup options panel when highlighting text.

### Screenshot: Editing your user profile settings

More about Language

Setting your language preference in your user profile is described in the section above. This section gives more information about that setting and other settings that affect the language Confluence will use.

Individual users can choose the language that Confluence will use to display screen text and messages. Note that the list of supported languages depends on the language packs installed on your Confluence site.

The language used for your session will depend on the settings below, in the following order of priority from highest to lowest:

- The language preference defined in your user profile. Note that you need to be logged in for this setting to take effect.
- The language that you choose by clicking an option at the bottom of the Confluence login screen. Confluence stores this value in a cookie. When the cookie expires, the setting will expire too.
- The language set in your browser. The browser sends a header with a prioritized list of languages. Confluence will use the first supported language in that list. Confluence administrators can disable this option by setting the `confluence.browser.language.enabled` system property to false.
- The default language for your site, as defined by your Confluence site administrator.

Editor Preferences

You can set some options that determine the way the Confluence editor works. Note that these settings affect only you. Other people using Confluence can enable or disable the settings on their user profiles independently.

**To change your editor preferences:**

1. Choose your profile picture at top right of the screen, then choose Settings
2. Click Editor under 'Your Settings' in the left-hand panel
3. Click Edit and make your changes
4. Click Submit

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Disable Autocomplete</td>
<td>Select to disable autocompletion when you press one of the trigger characters.</td>
</tr>
</tbody>
</table>
### Disable Autoformatting

Select to disable autoformatting when you type wiki markup in the editor. Click ? on the editor toolbar to learn more.

**Screenshot: User settings for the editor**

![Profile Settings](image)

### Set Your Profile Picture

Your profile picture is used as the icon for your personal space, to represent you in the People Directory, and to illustrate your comments. It also appears in various other places next to your name, such as in the list of recent updates on the dashboard.

When you upload your profile picture, you can resize and reposition it to make sure it looks great.

**Upload and adjust your profile picture:**

1. Choose your profile picture at top right of the screen, then choose **Profile**
2. Choose **Picture** on the left
3. Choose **Upload image > Upload an image**
4. Locate and select the picture on your computer or file server
5. Adjust the size and position of your photo, then choose **Save**

**Screenshot: Choosing a profile picture**
Screenshot: Resize and position your profile picture
You can't remove your own profile picture, but you can upload a new one any time. Alternatively you can ask your admin to remove your profile picture for you.

Choose Your Home Page

The dashboard is the default landing page when you log into Confluence. It gives you easy access to what's happening in your site, and helps you get back to pages you recently viewed and worked on.

You can choose to personalize your experience. and use an existing space home page as your landing page.

To set your home page:

1. Choose your profile picture at top right of the screen, then choose Settings
2. Choose Edit
3. Choose an option from the Site Homepage drop down. Only spaces you're allowed to view will appear.
4. Choose Submit.

You'll be directed to your new home page the next time you log in. You can change your personal home page at any time.

Alternatively, if your Confluence administrator has set a space home page as the landing page for the whole site, you can choose Dashboard from the Site Homepage drop down to use the dashboard as your landing page.
You can access the dashboard at any time using the dashboard URL. It'll look something like this: https://yoursite.com/wiki/dashboard.action.

Save for later

Saving pages for later helps you access them quickly from the dashboard or from your profile.

No time to read that page now? No problem, hit Save for later and it'll be waiting for you on the dashboard when you have more time. It's also a great place to store those pages that you use on a day to day basis.

Save for later was previously called Favorites.

Save a page for later

To save a page for later, hit the Save for later button at the top of the page.

The star icon will change to dark grey to indicate the page is saved. Hit the button again if you want to remove the page from the list.

Get back to your saved pages

To view your saved pages:

- Choose Saved for later on the dashboard sidebar.
- Choose your profile picture at top-right of the screen, then choose Saved for later – there's a list of your saved pages, and the spaces that you've added to My spaces.

You can also use the Favorite Pages Macro to include a list of your saved pages on any page.

Screenshot: Viewing and removing saved pages from the dashboard
View and Revoke OAuth Access Tokens

OAuth access tokens allow you to use a Confluence gadget on an external web application or website (also known as the ‘consumer’) and grant this gadget access to Confluence data which is restricted or privy to your Confluence user account.

OAuth access tokens will only appear in your user profile if the following conditions have been met:

1. Your Confluence Administrator has established an OAuth relationship between your Confluence site and the consumer. Confluence Administrators should refer to Configuring OAuth for more information about establishing these OAuth relationships.
2. You have accessed a Confluence gadget on the consumer and have conducted the following tasks:
   a. Logged in to your Confluence user account via the gadget and then,
   b. Clicked the ‘Approve Access’ button to allow the gadget access to data that is privy to your Confluence user account.

Confluence will then send the consumer an OAuth 'access token', which is specific to this gadget. You can view the details of this access token from your Confluence site's user account.

An OAuth access token acts as a type of 'key'. As long as the consumer is in possession of this access token, the Confluence gadget on the consumer will be able to access Confluence data that is both publicly available and privy to your Confluence user account. As a Confluence user, you can revoke this access token at any time. Furthermore, all access tokens expire after seven days. Once the access token is revoked or has expired, the Confluence gadget will only have access to publicly available Confluence data.

View your OAuth Access Tokens

To view all of your Confluence user account's OAuth access tokens:

1. Choose your profile picture at top right of the screen, then choose Settings
2. Click **View OAuth Access Tokens**. A view similar to screenshot below is displayed. Refer to **OAuth Access Token Details** below for information on interpreting this table.

If no access tokens have been set, then 'None specified' is shown.

**Screenshot: Viewing your OAuth Access Tokens**

<table>
<thead>
<tr>
<th>Authorised Applications</th>
</tr>
</thead>
<tbody>
<tr>
<td>The following applications are using your account to access Confluence data</td>
</tr>
<tr>
<td><strong>Consumer</strong></td>
</tr>
<tr>
<td>Atlassian JIRA</td>
</tr>
</tbody>
</table>

**OAuth Access Token Details**

Your list of OAuth access tokens is presented in a tabular format, with each access token presented in separate rows and each property of these tokens presented in a separate columns:

<table>
<thead>
<tr>
<th>Column Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Consumer</td>
<td>The name of the Confluence gadget that was added on the consumer.</td>
</tr>
<tr>
<td>Consumer Description</td>
<td>A description of this consumer application. This information would have been obtained from the consumer's own OAuth settings when an OAuth relationship was established between Confluence and that consumer. If the consumer is another Atlassian application, this information is obtained from the Consumer Info tab's 'Description' field of the OAuth Administration settings. The application's administrator can customize this Consumer Info detail.</td>
</tr>
<tr>
<td>Issued On</td>
<td>The date on which the OAuth access token was issued to the consumer by Confluence. This would have occurred immediately after you approved this gadget access to your Confluence data (privy to your Confluence user account).</td>
</tr>
<tr>
<td>Expires On</td>
<td>The date when the OAuth access token expires. This is seven days after the 'Issued On' date. When this date is reached, the access token will be automatically removed from this list.</td>
</tr>
<tr>
<td>Actions</td>
<td>The functionality for revoking the access token.</td>
</tr>
</tbody>
</table>

**Revoke your OAuth Access Tokens**

**To revoke one of your OAuth access tokens:**

1. View your Confluence user account's OAuth access tokens (described above).
2. Locate the Confluence gadget whose OAuth access token you wish to revoke and click **Revoke OAuth Access Token** next to it.

The gadget's access token is revoked and the Confluence gadget on the consumer will only have access to publicly available Confluence data.

**Collaboration**

Confluence is all about encouraging team collaboration to get the best results, so we’ve built in a number of ways you can notify other people about content that may be of interest to them.

You can:

- Work together with your team on a page or blog and see their changes in real time
• Share a link to a page or blog post via email
• Mention a user when you write a page, blog post, comment, or add a task
• Like a page, blog post or comment

Whenever you mention another user, they'll receive an email notification; if you like a page, blog post, or comment, the author will be notified that you like the content.

Other users can also find out about changes to content in Confluence by watching pages and spaces.

Another way to share Confluence content is by exporting it to other formats such as XML, HTML, Microsoft Word and PDF.

Network Overview

You can Create a network of users who are important to you, to make sure you're always up-to-date with their Confluence activity. You might want to follow your boss or teammates, to see what they're working on, or whoever creates the most entertaining blog posts.

When someone's part of your network, you'll be able to see when they:
• Add or edit pages or blog posts
• Comment on a page or blog post or edit existing comments
• Update their user profile

Follow another user

You can follow another user by using either their Hover Profile or your Network view.

To follow a user with their Hover Profile, hover your mouse over their profile picture when it appears in a page and choose Follow.

To follow a user from your Network view:

1. Choose your profile picture at top right of the screen, then choose Network
   Alternatively, choose More in the Network section of your profile sidebar.
2. Search for and select the user in the Following field
3. Choose Follow

If you now refresh or revisit your Network view, the profile picture(s) of the user(s) you just followed will appear within the Following list on the right. Their tracked activities will also start appearing in the Recent Activity list.

Access your network view

If you want to see what's been happening in your network, access your network view as described above.

You can access another user's Network view using the Hover Profile by choosing More > Network Page.

Screenshot: Example of the Network view
Notes

- **RSS feeds**: you can subscribe to any Confluence user's network RSS feed and receive summaries on the activities of other users they're following in their network. See [Subscribe to a Network RSS Feed](#).
- **Email notifications**: you can request email notifications of any activity in your network. See [Email Notifications](#).

**Likes and Popular Content**

Has someone written a good blog post or page on Confluence? Or made a comment you agree with? Click the **Like** button to let them know.

When you like a page, blog post or comment, the author of the content receives a notification. If enough people like the content, it'll appear on the **P**opular tab of the **dashboard**.

Disabling the 'like' feature

The *like* functionality is provided by a system app called the 'Confluence Like Plugin'. To remove the *like* functionality from your site, see [Disabling and enabling apps](#).

Disabling notifications when your content is 'liked'

There are two ways to turn the 'someone likes your page' notifications off.

Do either of the following:

- Open an email notification of a like, and click **Manage Notifications**
- Go to `<your confluence URL>/plugins/likes/view-notifications.action`

**Mentions**

Mentions (often known as @mentions) are a useful way of drawing someone's attention to a page or comment, or assigning a task to them. When you mention a user, they'll receive a notification by email and in their workbox; if you mention them in a task, the task is assigned to them and appears in their tasks list.
There are two ways to mention someone: using autocomplete, or via the Insert menu in the editor toolbar.

Use autocomplete

To mention someone using autocomplete, type '@' in the editor then start typing their name. Choose the person you want to mention from the list of suggestions.

Confluence will suggest people you've mentioned previously (after yourself, of course).

It then continues to suggest matches as you type. If you've not mentioned the person recently, we'll also include information about whether they've commented or contributed to the current page, to help you find the right person, fast.

Use the Insert menu

If you'd rather use the Insert menu, choose Insert > User Mention then search for and select the user you want to mention.
Notes

- **Disable mentions** – The functionality is provided by a plugin called the 'Confluence Mentions Plugin'. If you need to remove the user mention functionality from your site, you can disable the plugin. See Diabling or Enabling a Plugin.

- **Mentioning groups** – You can only mention individual users who have the 'Can Use' Confluence global permission. There's a feature request to allow mentions for groups:

```
CONFSERVER-23015 - Extend 'Mentions' to work with groups as well
```

- **Link to a user profile** – You can use a square bracket `[[` and a person's name to trigger Confluence autocomplete and link to a person's user profile or personal space. Confluence will send the person a notification just as if you had used @mention (unless the administrator has disabled the user mention feature).

- **Mention notifications** - A notification is sent to a person the first time you mention them in the content of a page, but not for subsequent mentions. If you need to catch someone's attention, and you've already mentioned them on the page, try mentioning them in a comment. A notification is sent every time you mention someone in a page comment or inline comment, not just the first time.

- **Frequently mentioned people** - Confluence relies on your browser's local storage to remember the people you mention regularly. You may see different results if you switch devices, or don't allow local storage. Confluence doesn't indicate whether someone is a creator, contributor or commenter when they are also a recent mention (because we're grabbing them straight from your local storage, not the page itself).

- **Changing the mention name** - if you change the mention name in the editor (for example you backspace to remove their surname, or edit the mention link to change their full name to their preferred name) this will be treated as free text and won't be updated if the person changes their name, or is deleted from Confluence.

Share a Page or Blog Post

Use the Share button when viewing a page or blog post to email anyone a link to that page or blog post. You can either grab the short URL from the share dialog, or enter a Confluence user, group or email address.

To share a page or blog post by email:

1. Go to the page or blog post you wish to share.
2. Choose Share.
3. Enter a username, group or email address, and select the appropriate user, group or email address from the list of suggestions. Repeat this process to add multiple recipients to the list (or use the trash icons to remove people from the list).
4. Enter an optional message.
5. Choose Share to send the link via email.

In addition to an email, Confluence users will also receive a notification in their Confluence workbox. See Workbox Notifications.

You can also share pages from inside the editor. Hit the + button in the editor to invite people to edit the page with you.

Notes:

- The option to add people is only available if your site has a mail server configured.
- Sharing or inviting someone to edit a page or
blog post does not automatically grant any permissions - they will still need the appropriate Confluence permissions to access Confluence and view or edit the page.

Comment on pages and blog posts
Comments are a great way to bring others into the conversation about a page or blog post. They allow you to remark on content, add important information, ask questions, and generally drive collaboration and teamwork.

You can add a comment at the bottom of any page or blog post, or add an inline comment by highlighting specific text on the page.

Add a page or blog post comment

1. Type your comment in the comment field at the bottom of the page
2. Optionally, choose Preview to see how your comment will appear
3. By default, Watch this page is ticked (This means you'll start receiving notifications about the page. Uncheck it if you don't want to watch the page.)
4. Choose Save (Ctrl+S or +S)

Other users can reply and/or like your comment, and you or a space administrator can edit your comment(s).
Add an inline comment

1. Highlight the text you want to comment on
2. Choose the add comment button that appears above the highlighted text
3. Type your comment and choose Save (Ctrl+S or +S)

The selected text will appear with a yellow highlight indicating an inline comment; choose any highlighted text on the page to display the related comment(s).

Just like page and blog post comments, others can reply to, or like, your inline comments, and you'll be notified when they do.
Resolve inline comments

Hit Resolve to hide a set of inline comments once the conversation's finished. If you want to view resolved comments, choose

- > Resolved comments; to reopen a resolved comment, choose Reopen at the bottom left.

Rich comments

Inline and page comments might look simple, but they support rich text (like bold, underline, and italics), bulleted and numbered lists, links, and @mentions. You can also drop images into any comment, to really illustrate your point.

Link to a comment

You can link directly to a comment on a page. See Links for more information.

If you don't see a popup when you highlight text, check that Text Select is enabled in your profile settings.

Comment permissions

- Add a comment – You need the 'Add Comments' permission in the space.
- Edit a comment – You need the 'Add Comments' permission. Space administrators can edit all comments within their space. The date on a comment always indicates the time the comment was last edited.
- Delete a comment – You need the 'Remove Comments' permission. Deleted comments cannot be restored. If you don't have the 'Remove Comments' permission, you can delete your own comments, but only if there are no replies to your comment.
- Disable comments – If you don't want comments in a particular space, remove the 'Add Comments' permission from the 'confluence-users' or 'users' group, anonymous users and all other users and groups. The option to add comments will no longer appear on pages or blog posts in that space.

See Space permissions for more information. There is no permission that controls comments across the entire site.

Members of the Confluence-administrators group can add, edit and delete comments, even if you remove their comment permissions in the Space permissions configuration.
Notes

- Choose Watch at the top-right of the page to receive an email notification whenever anyone edits or adds a comment to the page.
- On blog posts only, an 'Author' lozenge will appear on any comments made by the original author of the post.
- It's not possible to delete all comments on a page simultaneously, or change the order of comments.
- Inline comments on text that is included on a page using the Include macro or Excerpt include macro won't be visible. They are only visible on the original page.

Watch Pages, Spaces and Blogs

You can 'watch' a Confluence page, blog post or space. Confluence will then send you a notification email whenever anyone updates your watched content.

You'll receive email notifications for:

- Page / blog post edits (unless the author clears the 'Notify watchers' check box).
- Deletions.
- Attachments, including new versions or deletions of an existing attachment.
- Comments, including new comments or deletions of existing comments.

By default, Confluence will assign you as a watcher of any page or blog post that you create or edit. This behavior is called 'autowatch'.

There's no daily digest for email notifications. You'll receive immediate emails for important notifications (like mentions and new pages), but when lots of changes are being made at the same time, you'll only receive a single email with all the changes (within a 10 minute window).

You will not receive email notifications for content changes due to the output of a macro, because the page content itself hasn't been edited. We also don't send a notification when a comment is edited.

You need 'View' permission for the page, blog post or space to receive notifications.

Watching a page or blog post

To start watching a page or blog post:

1. Go to the page or blog post.
2. Choose Watch and select the relevant check box.

To stop watching the page or post, deselect the relevant check box.

Watching an entire space

You can choose to watch all the pages and blog posts in a particular space.

The quickest way is to use the Watch option on a page or blog post, as described above.

To stop watching the space, deselect the relevant check box.

Alternatively, choose Pages in the space sidebar, then choose Watch this space at the top right.
Watch for new blog posts in a space

You can choose to receive a notification whenever someone adds a blog post in the space. You will not receive notification when a blog post is updated, deleted or commented on.

To watch for new posts:
1. Go to a blog post in the space.
2. Choose **Watch** and select **Watch for new blog posts in this space**.

To stop watching for new blog posts, deselect the relevant check box. Alternatively, choose **Blog** in the space sidebar, then choose **Watch this blog** at the top right.

Watch all spaces on the site

You can receive notifications about changes to the content of pages, blog posts and comments from all spaces on a Confluence site.

To start watching for content changes across the whole site:
1. Choose your profile picture at top right of the screen, then choose **Settings**
2. Choose **Email**.
3. Choose **Edit** then choose **Subscribe to daily updates**.
4. Choose **Submit**.

Watching for all new blog posts on the site

You can choose to watch for all new blog posts in all spaces on the Confluence site. You will not receive notification of updates to or deletions of blog posts, nor of comments on the blog posts.

To start watching for all new blog posts:
1. Choose your profile picture at top right of the screen, then choose **Settings**
2. Choose **Email**.
3. Choose **Edit** then choose **Subscribe to all blog posts**.
4. Choose **Submit**.

Manage watches from your user profile

The ‘Watches’ page in your user profile displays a list of all pages and spaces you are currently watching.

**To manage your watches:**
1. Choose your profile picture at top right of the screen, then choose **Watches**.
2. Choose **Stop Watching** for any unwanted spaces or pages.

Manage watches from the email message

The email notifications that you receive from Confluence have some useful links at the bottom of the email message. The links in each message vary, depending on the context. In general, the links allow you to view the page online, reply to a comment, and so on.

In particular with respect to setting your notification preferences, you will see one or more of the following links:
- **Stop watching page** – Click this link to stop watching the page that triggered the email notification.
- **Stop watching space** – Click this link to stop watching the space that triggered the email notification.
- **Stop following this user** – Click this link to stop following the user whose update triggered the email notification.
- **Manage Notifications** – Click this link to go to the email settings page in your user profile.

*Screenshot: Example email notification footer showing links*
Autowatch and other notification options

By default, Confluence will assign you as a watcher of any page or blog post that you create or edit. This behavior is called 'autowatch'. You can turn autowatch on or off, and set other notification options, in the email settings section of your user profile. See Edit Your User Settings.

**Manage Watchers**

As a space admin, you may want to control who's notified about changes and updates to pages and posts within a space. You'll do this by managing the watchers of specific pages and posts, or of the entire space.

Take the example of a new member starting on your team, who should see when changes are made in the team space – you can add them as a space watcher so they get updates when any page or post in the space is changed. If someone no longer needs to be notified, you can remove them as a watcher just as easily.

To manage the watchers of a page or blog post:

1. Go to the page or blog post for which you want to manage the watchers
2. Choose Watch > Manage Watchers
   The left-hand column of the 'Manage Watchers' dialog shows the users watching the page or blog post. The right-hand column shows the users watching the space.
3. Do either of the following:
   - Add someone as a watcher of the page, post, or space – type their username in the relevant search box and hit Add
   - Remove an existing page, post, or space watcher – choose the trash icon next to their name
Email Notifications

You can ‘watch’ a page, blog post or space. Confluence will then send you a notification by email whenever anyone adds or updates content on that page or space. You'll receive immediate emails for important notifications (like mentions and new pages), but when lots of changes are being made at the same time, you'll only receive a single email with all the changes within a short window (usually 10 minutes).

You can also subscribe to daily email reports and other notifications of various updates, as described below.

You'll only receive notifications for content that you have permission to view. Users that have been disabled by an administrator will not receive email notifications.

Subscribing to email notifications

You can subscribe to be notified when:

- A blog post is added or changed in a space that you have permission to view.
- Someone you're following makes an update in a space that you have permission to view.
- Someone follows you.

You can also subscribe to these summary reports:

- A daily report of the 30 most popular updates to all spaces that you have permission to view.
- A daily or weekly report of recommended updates, in all spaces that you have permission to view.

To edit your email notification settings:
1. Choose your profile picture at top right of the screen, then choose Settings.
2. Click Email in the left-hand panel.
3. Click Edit.

Here’s an explanation of all the email settings.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
<th>Content</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Autowatch</strong></td>
<td><strong>Option</strong>: Do you want Confluence to automatically add you as a watcher on each page or blog post that you add or update? If you are a watcher of a page or a post, you will receive notification of future changes.</td>
<td>• Pages and blog posts that you create, edit or comment on.</td>
</tr>
<tr>
<td><strong>Subscribe to daily updates</strong></td>
<td>Receive daily email reports showing changes to content in all spaces that you have permission to view. Note: Daily email reports do not include information about attachments on a page or blog post that are added, edited or deleted. Up to 30 updates will be included, sorted by popularity.</td>
<td>• Pages and blog posts that are added, edited or deleted. • Comments on a page or blog post that are added, edited or deleted. • Updates by users who have changed their personal profile.</td>
</tr>
<tr>
<td><strong>Subscribe to all blog posts</strong></td>
<td>Receive email notifications for changes to blogs in your Confluence installation that you have permission to view.</td>
<td>• Blog posts added, edited or deleted.</td>
</tr>
<tr>
<td><strong>Subscribe to network</strong></td>
<td>Receive email notifications for changes to content by all users that you are following, which you have permission to view.</td>
<td>• Space is created. • Page or blog post is created.</td>
</tr>
<tr>
<td><strong>Subscribe to new follower notifications</strong></td>
<td>Receive an email message when anyone chooses to follow you.</td>
<td></td>
</tr>
</tbody>
</table>
| **Notify on my actions** | **Option:** Do you want to receive email notifications for your own changes?  
Note: If you have not subscribed to any email notifications and are not watching any pages/spaces, then selecting ‘Notify on my actions’ will not do anything. |
|-------------------------|-------------------------------------------------|
|                         | **• All pages and spaces that you are watching.**  
**• This affects all subscriptions set.** |
| **Show changed content** | **Option:** Do you want your notifications to include details of the changes made to the content?  
- If you do not select this option, your notifications will include only the title of the page, and any comment the author made when updating the page.  
- If you do select this option, your notifications will show the differences between the current and previous versions of the page. See [Page History and Page Comparison Views](#). |
|                         | **• Edits to pages and blog posts.** |
| **Subscribe to recommended updates** | **Receive a daily or weekly email message showing the top content that is relevant to you from spaces that you have permission to view.**  
How do you set the frequency of the mail message? A link in the email message allows you to choose daily or weekly notifications.  
How do you enable and disable the notification? You can turn off the notification by clicking a link in the email message. You can also turn the notification on or off by setting the ‘Subscribe to recommended updates’ option in your user profile. |
|                         | Confluence chooses the content to display, based on:  
- Pages and blog posts that people have recently liked.  
- Pages and blog posts that people have recently commented on.  
- Pages and blog posts that have recently been created.  
‘Recent’ means any activity that occurred since the last recommended updates message was sent to you.  
The activities are listed in order of popularity, with the most popular at the top. Likes, comments and content creations are scored equally. Activity that involves people in your network ranks higher than activity not involving your network. Content from My spaces also ranks higher than content in other spaces. The recommended updates summary does not include any content that you created yourself, and it gives a lower ranking to content that you have participated in, for example by adding a comment or updating the page.  
If there is no activity to report, Confluence will not send the email message. |
Notes

- **Mail server**: To enable Confluence to send email notifications, a System Administrator must configure an email server. See [Configuring a Server for Outgoing Mail](#).
- **Batching window**: System Administrators can change the batching window for changes and comments on the same page or blog post in the [Send batched notifications](#) scheduled job. Increase the time for fewer emails or reduce the time if more immediate notifications are essential in your site.
- **Recommended updates email**: Confluence Administrators can set the default options for the recommended updates notification.

Choose the cog icon

, then choose **General Configuration**. Click **Recommended Updates Email** in the left-hand panel. See [Configuring the Recommended Updates Email Notification](#).

- **Email threading**: Confluence will attempt to group all the email notifications about changes to a specific page together. Other notifications such as sharing a page, requesting access to a page, or recommended updates emails are intentionally not grouped. Not all mail clients support email threading, and different email clients use different methods for threading emails. We've tested Confluence's email threading with Apple Mail 10.3, Outlook 2011, Outlook 2016, GMail, Google Inbox and Outlook.com.

---

**Do more with Confluence**

Take your Confluence notifications to the next level with these email notification apps on the [Atlassian Marketplace](#):

- **Notifications - ScriptRunner for Confluence**: Manage Confluence notifications more easily, with greater control and customization
- **No Email Storm** - change the behaviour of the Notify Watchers checkbox in the editor

---

**Subscribe to RSS Feeds within Confluence**

An RSS feed is a format for delivering summaries of regularly changing web content. Subscribing to an RSS feed allows you to stay informed of the latest content from sites that you are interested in.

RSS is not designed to be read in a regular web browser. Specialized RSS newsreader programs can check RSS files every so often, and tell you what's new on a site. Your reader may be on a website, a browser extension, part of your email program, or a stand-alone program.

Confluence generates its own RSS feeds for tracking updates to content within Confluence. You will need an RSS reader which can grab the RSS feeds from Confluence and display them for you.

Confluence's **RSS macro** allows you to display the contents of an RSS feed on a Confluence page. The feeds may come from a Confluence feed generator or from external sites. In this way, Confluence can act as an RSS reader.

---

**Confluence RSS feeds**

RSS feeds allow you to track updates to content within Confluence. You will need an RSS newsreader to read a feed.

You can create a customized RSS feed using the RSS Feed Builder or subscribe to one of the pre-specified feeds generated by Confluence.

**What would you like to do?**
• **Create and subscribe to customized RSS feeds using the RSS Feed Builder** – Create a customized RSS feed. For example, you can filter your feed using a label, specify the number of items and days to include in your feed, and so on.

• **Subscribe to pre-specified RSS feeds**

  – Generate an RSS feed automatically in a minimal number of steps.

• **Subscribe to a feed of any Confluence user’s network** – Track the activities of users the selected person is following.

### Remove an RSS feed

There is no need to try to delete or remove an RSS feed built by the Confluence **RSS feed builder**.

Explanation: The feeds generated by the RSS Feed Builder are dynamically generated via the parameters included in the feed URL (address). For example, take a look at the following feed URL:

```plaintext
http://confluence.atlassian.com/createrssfeed.action?types=page&sort=modified&showContent=true...
```

The above feed URL will generate a list of pages ('types=page'), sorted by the modification date and showing the page content. The feed is generated at the time when the URL is fetched and there is no RSS feed information stored on the database. For that reason, there is no need to remove anything.

### Subscribe to pre-specified RSS feeds

This page tells you how to get hold of an RSS feed which Confluence has predefined for you.

**To subscribe to predefined RSS feeds for a particular space:**

1. Go to the space and choose **Space tools > Content Tools** from the bottom of the sidebar
2. Choose **RSS Feeds**
3. Copy and paste the link for one of the feeds into your RSS newsreader

**Feeds include:**

- Pages
- Blog
- Mail
- Comments
- Attachments
- All content

**To subscribe to predefined RSS feeds for a particular page (where available):**

Note that the word 'page' here means a part of the Confluence user interface, rather than a page that contains Confluence content. For example, your **Network view** offers an RSS feed.

1. Go to the page
2. Locate the following icon, which is available in the top-right corner of certain pages:

```
RSS
```
3. Copy and paste the icon's link into your RSS newsreader

**Notes**

The predefined RSS feed will return no more than 10 entries within the last 5 days, if you want to customize your Confluence RSS feed (for example, use a label to filter your feed), use the **RSS Feed builder** instead of the above instructions.

**The RSS Feed Builder**

Using the RSS feed builder, you can create customized RSS feeds to subscribe to changes within Confluence.
Wondering what an RSS feed is? See more information about RSS Feeds.

Build an RSS feed

Follow the steps below to build your feed, choosing the type of content and the time period you want to monitor.

To create a customized RSS feed:

1. Choose the help icon at top right of the screen, then choose Feed Builder
2. Select the content types you want in your feed
   Check Mail if you want to know when the email archive is updated. (See the overview of mail archives in Confluence.)
3. Select one or more spaces from the list
4. Click Advanced Options to set the following:

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Feed Name</td>
<td>The default name is based on the name of your Confluence installation. For example, 'Extranet RSS Feed'.</td>
</tr>
<tr>
<td>With these labels</td>
<td>Enter one or more labels separated by spaces or commas. Confluence returns all content (of the selected types) that matches one or more of the labels. See the hint below about using labels to customize your feeds.</td>
</tr>
<tr>
<td>Exclude these spaces</td>
<td>Exclude specific spaces from those already selected.</td>
</tr>
<tr>
<td>Sorted by</td>
<td>Sort content by either the date or creation or the date they were last updated.</td>
</tr>
<tr>
<td>Limit to</td>
<td>Specify the number of items returned in your feed.</td>
</tr>
<tr>
<td>Within the last</td>
<td>Specify how old items returned can be.</td>
</tr>
<tr>
<td>Include content for pages</td>
<td>Specify whether the entire page is displayed in the feed.</td>
</tr>
</tbody>
</table>

5. Choose Create RSS Feed
6. Drag or copy the link into your RSS reader

Hints

- **Separate feeds.** Try building separate feeds, one for pages only and one that includes comments as well. This allows you to monitor only pages if you are short of time, and to read the comments when you have more time.
- **Labels to customize your feed.** You can use the RSS feed builder to track updates to labeled pages and comments on those pages. Here is an idea for customizing your RSS feed by using your own personal label(s). This is useful if you want to track updates to specific pages or blog posts, and you
do not want to deal with emails. You can use this method as an alternative to watching pages.

- Build an RSS feed that returns pages, blog posts and comments labeled with a personal label, such as 'my:feed'.
- Each time you want to 'watch' a page, just label it with 'my:feed'.
- All updates and comments will automatically come through your RSS feed.

Notes

- **Removing an RSS feed:**

  There is no need to try to delete or remove an RSS feed built by the Confluence **RSS feed builder**.

  Explanation: The feeds generated by the RSS Feed Builder are dynamically generated via the parameters included in the feed URL (address). For example, take a look at the following feed URL:

  ```
  http://confluence.atlassian.com/createrssfeed.action?types=page&sort=modified&showContent=true...
  ```

  The above feed URL will generate a list of pages ('types=page'), sorted by the modification date and showing the page content. The feed is generated at the time when the URL is fetched and there is no RSS feed information stored on the database. For that reason, there is no need to remove anything.

- **Feed authentication options**: Confluence can offer you the option of an anonymous feed or a feed that requires authentication.
  
  - An **anonymous** feed will show only the content that is visible to anonymous users. The feed URL does not contain the &os_authType parameter mentioned below. This feed is useful only if your Confluence site allows anonymous access. If a feed is anonymous, you only get anonymously-viewable content in the feed regardless of whether you are a Confluence user or not.
  
  - An **authenticated** feed requires you to log in to Confluence before you can retrieve the content. The feed URL contains the following parameter: &os_authType= basic. The option to choose between an anonymous and an authenticated feed is currently not available on the feed builder screen. The feed builder offers only authenticated feeds. See CO NF-21601 for details and a workaround.

---

**Subscribe to a Network RSS Feed**

You can create an RSS Feed from any user’s **network view**, allowing you to receive summaries on the activities of users they are following in their network. The types of activities tracked in these RSS feed summaries include:

- Additions or edits to pages or blog posts
- Comments added to a page or blog post or edits to existing comments
- Updates to a user's profile

**Subscribe to a user’s network feed**

To subscribe to a user’s network RSS feed:

1. Locate the RSS icon , which is available from the top-right of:
   
   - The 'Recent activity of the users you are following' section of your network page, or
   - The 'Activity of followed users' section of another user’s network page.

2. Copy and paste the icon's link into your RSS newsreader
Customize your network RSS feed

Confluence does not provide a way of customizing a network RSS feed via the user interface. However, you can modify the maximum number of results and type of content displayed in these feeds by directly editing the RSS feed link in your RSS newsreader.

To modify the maximum number of results displayed in your RSS feed:

1. Edit the RSS feed link in your RSS newsreader.
2. Change the value of the \texttt{max} parameter from its default value of 40 to a value of your choice.
   Example:
   http://confluence.atlassian.com/feeds/network.action?username=MYNAME&max=60&publicFeed=false&os_authType=basic&rssType=atom
3. Save the modified link in your RSS newsreader.

To modify the type of content displayed in your RSS feed:

1. Edit the RSS feed link in your RSS newsreader.
2. Append the parameter \texttt{contentType} to the end of the link, followed by an equals sign (=) and then add the appropriate content type value of your choice:
   - \texttt{PAGE} — restricts the RSS feed to page additions or updates.
   - \texttt{BLOG} — restricts the RSS feed to blog post additions or updates.
   - \texttt{ATTACHMENT} — restricts the RSS feed to attachment additions or updates.
   - \texttt{COMMENT} — restricts the RSS feed to comment additions or updates.
   
   Content type values are case-sensitive. Ensure that each parameter is separated from the other by an ampersand (\&).
   Example:
   http://confluence.atlassian.com/feeds/network.action?username=ggaskell&max=40&publicFeed=false&os_authType=basic&rssType=atom&contentType=BLOG
3. Save the modified link in your RSS newsreader.

Notes

It is not possible to filter for more than one type of content by adding multiple values to the \texttt{contentType} parameter.
Workbox Notifications

The Confluence workbox displays all notifications collected from Confluence page watches, shares, mentions, and tasks. From your workbox you can reply to comments, like a comment or page, watch a page, or open the relevant page or blog post.

If your Confluence site is linked to a Jira application such as Jira Software or Jira Service Desk, you’ll also see notifications from your Jira application in the workbox.

Looking to manage your notification email messages instead? See Email Notifications.

Manage your notifications

1. Choose the workbox icon in the header.
   - A number will appear the workbox icon, to indicate the number of unread notifications waiting for your attention.
   - You can use the keyboard shortcut: Type g then n. (When in the Confluence editor, click outside the editor before pressing the keyboard shortcut keys.)

2. Choose a notification from the list, to see the notification details. You can then:
   - Open the related page, blog post, or comment.
   - Like or Unlike the page, blog post, or comment.
   - Watch or Stop Watching to receive notifications, or stop receiving notifications, about a page or blog post.
   - Reply a comment, without leaving the workbox.

Screenshot: Your Confluence notifications in the workbox
Which notifications are included?

The workbox displays a notification when someone does one of the following in Confluence:

- **Shares** a page or blog post with you.
- **Mentions** you in a page, blog post, comment or task.
- Comments on a page or blog post that you are watching.
- **Likes** a page or blog post that you are watching.

The workbox does **not** show notifications triggered because you are watching a space. Only watches on pages and blog posts are relevant here.

The notification in your workbox appears as 'read' if you have already viewed the page or blog post.

If your Confluence site is linked to a Jira application, you will also see the following Jira notifications in your workbox:

- Comments on issues that you are watching.
- Mentions.
- Shares of issues, filters and searches.

<tr>
<td>p</td>
<td>Move up to the previous notification for a particular page or blog post.</td>
</tr>
<tr>
<td>Enter</td>
<td>Open the selected notification.</td>
</tr>
<tr>
<td>u</td>
<td>Return to the notification list after opening a particular notification.</td>
</tr>
</tbody>
</table>

**Manage notifications with Confluence mobile**

You can also view and respond to notifications on your phone or other mobile device. See Confluence Mobile for more about mobile platforms.

**Notes**

- Read notifications are automatically deleted after 2 weeks.
- Unread notifications are automatically deleted after 4 weeks.
- You cannot delete your notifications yourself.
- If a new notification arrives while you have workbox open, the count appears on the workbox icon but the notification is not added to the workbox. You need to close workbox and re-open it to see the new notification.
- The ability to receive notifications from Jira or another Confluence site is available in Confluence 4.3.3 and later. To receive Jira notifications, you need Jira 5.2 or later.
- Administrators can enable and disable the workbox on your Confluence site. They can also connect a Jira site or another Confluence site, so that notifications from those sites appear in your workbox too. See Configuring Workbox Notifications.
- The Confluence workbox is provided by a set of plugins. To remove the personal notifications and tasks functionality from your site, you can disable the following plugins. See Disabling or Enabling a Plugin for instructions. Disabling these plugins will disable the entire workbox. It is not possible to disable only tasks or only notifications:
  - Workbox - Common Plugin
  - Workbox - Host Plugin
  - Workbox - Confluence Provider Plugin
- If you want to re-enable the plugins, do so in the following order: Common Plugin, Host Plugin, Confluence Provider Plugin.
- There is no option to disable the workbox for an individual user.

**Search**

Confluence gives you a few ways to find what you're looking for. Here's an overview of Confluence search, and a few tips to help you find things more easily.

**How Confluence search works**

When you enter a search term, Confluence looks for content in all spaces (including personal spaces), pages, mail, personal profiles, and space descriptions. It also looks at the content of some attached file types (Word, Text, PowerPoint, Excel, PDF, and HTML).

Search results are based on your Confluence permissions, so you'll only see...
Start a search

To search Confluence:

1. Click the search field in the top-right of Confluence to open the expanded search panel.
2. Start typing your search term.

Results will appear as you type — you don't need to hit enter.

We exclude comments from your search results unless you select the comment option from the type filter.

*Screenshot: the search panel*
1. **Search filters** – refine your results by space, contributor, type, date, or label.
2. **Advanced search** – go to the advanced search page.
3. **Search tips** – get search help, and tips for refining your search.

**Tip:** Type `/` on your keyboard to quickly open the search panel.

## Filter your search results

You can refine your search using interactive filters on the left-hand side of the search panel.

### Search within a space

Use the **space** filter to find content within a particular space or list of spaces. The space you're currently in will appear at the top of the list by default.

Start typing the space name and choose from the list of suggested spaces.

Use the **×** toggle to search within archived spaces.
Search for content by a specific person

Use the **contributor** filter to restrict your search to content modified (created, updated, or commented on) by particular people. Start typing the person's username, or part of their name, and we'll show you a list of possible matches. You can add as many people as you like.

**Tip:** To search for your own work, click the **Contributor** filter, then select your profile from the drop-down menu. Your name appears here by default, so it's easy to find.

Filter by content type

Use the **type** filter to only show content of a certain type, such as pages, blog posts, comments or user profiles.

Search within a specific time frame

Use the **date** filter to search for content last modified (created, updated, or commented on) within a particular period of time.

To search within a specific date range:

1. Click **Advanced Search** on the left-side of the search panel.
2. In the **Last modified** section, choose **Custom**.
3. Select the date range from the drop-down date picker.

Search for content with a specific label

Use the **label** filter to search for content containing a specific label. Start typing the name of the label and choose from the list of possible matches.

Search for admin options

As a Confluence admin, you can quickly access admin options from the search panel.

Start typing what you want to do. We'll show the top three matching admin items at the top of your search results. You'll only see options you have permission to perform.

If you apply a search filter, admin items will no longer appear in your results.

Advanced search
The advanced search page allows you to add more search filters, such as creator, title, date range or ancestor page.

To use advanced search:

1. Click the search field at the top-right of Confluence.
2. Click **Advanced search** on the left-side of the search panel.
3. Type your keyword in the search field and hit enter.

Adding a filter from the advanced search page

To add a search filter from the advanced search page:

1. Click **Add a filter** on the bottom left of the advanced search page.
2. From the drop-down menu, select the relevant filter.

**Screenshot: advanced search page**

1. **Search filters** – narrow your search by adding filters.
2. **Add a filter** – add more filters for even more precise search.

You can choose from these additional filters:

- **Creator** – Restrict your search to content created by a particular person. Start typing the person’s username or part of their name and Confluence will offer you a list of possible matches.
- **Label** – Only search for content containing specific labels.
- **With parent** – Only search for direct children of a specific parent page.
- **With ancestor** – Only search for pages below a certain page in the hierarchy.
- **Created** – Choose or enter a date to only show content created within a particular period of time.
- **Mentioning user** – Only search for content that mentions a particular Confluence user.
- **With title** – Only search within page or blog titles.

These filters are provided by **Confluence Query Language (CQL)**.

**Advanced search syntax**
You can also refine your search using Confluence search syntax. These are words or symbols you enter into the search field to help narrow down your results. Learn more about Confluence Search Syntax.

**Confluence Search Syntax**

You can create an advanced search query using Confluence search syntax. These are special words and symbols you enter into the search field to narrow the focus of your search.

This page outlines the syntax supported by Confluence’s search engine, Lucene.

---

**On this page:**
- How to use search syntax
- Search for an exact match
- Search using wildcards
- Exclude words from your search
- Combine search terms
- Search for nearby words (proximity search)
- Search within an alphabetic range
- Search for words spelled similarly (fuzzy search)
- Combining search operators
- Searching for macros
- Search specific fields in Confluence
- Confluence search fields

**Related pages:**
- Search
- Confluence Search Fields
- Search the People Directory

---

How to use search syntax
To create a search query using Confluence syntax:

1. Click the search field at the top right of Confluence to open the expanded search panel.
2. Type your query using syntax supported by Confluence.

You can use multiple search words and operators in your query.

*Screenshot: an example of a search query using Confluence search syntax*

**Search for an exact match**

Use double quotes around your search term to find a specific word or phrase. For example "product roadmap" will search for content that contains the phrase 'product roadmap', or a phrase where 'product' and 'roadmap' are the major words.

"product roadmap"

**Limitations with exact match search**

**Phrases with stop words**

Confluence ignores common words (stop words) — such as 'and', 'the', 'or', and 'it' — even if they are included within double quotes.

For example, searching for "the IT budget" will only return pages containing 'budget', because 'the' and 'it' are stop words.

If you'd like to change this, vote on this improvement request:

**CONFSERVER-14910** - Provide ability to override Lucene tokenisation and stemming and search for exact text (literal search) [REVIEWING]

**Phrases with special characters**

Confluence ignores all symbols, such as hyphens or underscores, even if they are included within double quotes.

For example, if you search for "DOC-8510", you get all pages containing 'doc' and '8510'.

Avoid using special characters, such as hyphens, in page or attachment names as they may not be found by Confluence search.

**Search using wildcards**

Wildcards replace one or more characters in your search. They can help expand your search. For example, the search below would find https://www.atlassian.com or http://www.atlassian.jp
Confluence doesn't support leading wildcards. This means searching for *heese will not return cheese.

<table>
<thead>
<tr>
<th>Wildcard</th>
<th>Description</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Multiple characters</td>
<td>Use an asterisk (*) at the end of your word to replace multiple characters.</td>
<td><strong>print</strong> finds content containing 'printer', 'printing', 'prints' and so on.</td>
</tr>
<tr>
<td>Multiple wildcards</td>
<td>Use asterisks (*) to add more than one multiple-character wildcard</td>
<td><strong>r*c</strong> finds content containing 'react', 'recovery', 'refactor' and so on.</td>
</tr>
<tr>
<td>Single character</td>
<td>Use a question mark (?) to replace a single character in your search.</td>
<td><strong>b?tter</strong> finds content containing 'butter', 'bitter', 'better', 'batter' and so on.</td>
</tr>
</tbody>
</table>

**Leading wildcards**

Lucene doesn't allow wildcards at the beginning of your search, but you can format your search as a regular expression as a workaround. For example, you can't search for *hum* or ?hum?, as they begin with a wildcard, but you can search for /.*hum.*/ and find things like hum, human, and inhumane.

**Exclude words from your search**

Use NOT or minus (-) to exclude words from your search.

chalk NOT cheese

<table>
<thead>
<tr>
<th>Operator</th>
<th>Description</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>NOT</td>
<td>Use NOT (in capital letters) to exclude a word from your search.</td>
<td>chalk NOT cheese finds content containing 'chalk' but NOT 'cheese'</td>
</tr>
<tr>
<td>Minus (-)</td>
<td>Put a minus sign (-) in front of words you want to leave out.</td>
<td>chalk butter -cheese finds content containing 'chalk' and 'butter' but not 'cheese'</td>
</tr>
</tbody>
</table>

**Combine search terms**

<table>
<thead>
<tr>
<th>Operator</th>
<th>Description</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>OR</td>
<td>Use OR (in capital letters) to search for content that contains one of the terms.</td>
<td>chalk OR cheese finds content containing either 'chalk' or 'cheese'</td>
</tr>
<tr>
<td>AND</td>
<td>Use AND (in capital letters) to search for content that contains more than one search term.</td>
<td>chalk AND cheese finds content containing both 'chalk' and 'cheese'</td>
</tr>
</tbody>
</table>

You can also combine search terms and operators, for example:

(cheese OR butter) AND chalk
Search for nearby words (proximity search)

Use a tilde (~) followed by a number to find two words within a certain number of words of each other. For example, the following search will return 'Octagon blog post', but not 'Octagon team blog post':

```
octagon post~1
```

The following search won't work, because you can't search for two words within zero words of each other. If you think the words are next to each other, use the matched phrase search.

```
octagon post~0
```

Search within an alphabetical range

Use 'TO' (in capital letters) to search for names that fall alphabetically within a specified range. For example:

```
[adam TO ben]
```

Note: You can't use the AND keyword inside this statement.

Search for words spelled similarly (fuzzy search)

Use a tilde (~) to find words spelled similarly, or to pick up misspellings. For example, if you want to search for octagon, but you're not sure how it's been spelled, type the word followed by a tilde:

```
 octogan~
```

Combining search operators

You can also combine various search terms together:

```
 o?tag* AND past~ AND ("blog" AND "post")
```

Searching for macros

You can search Confluence pages to find where a macro is used. Start your search with `macroName:` and type the macro name after the colon. For example, to search for all excerpt-include macros:

```
macroName:excerpt-include*
```

Search specific fields in Confluence

Confluence data is stored in fields, for example title, label, type and so on. To search for content using a
specific field, type the name of that field into the search box followed by a colon (:), and then the term you're looking for.

You can use multiple fields in the same query. For example, you could use the following query to find all blog posts containing the Excerpt Include macro.

```plaintext
type:blogpost AND macroName:excerpt-include*
```

Confluence will only look for the term directly after the colon. For example, the query below will search for 'some' in the title field and 'title' in the default fields:

```plaintext
title:some title
```

Use double quotes if you want to find multiple keywords:

```plaintext
title:"some title"
```

Confluence search fields

This table lists some common search fields, and shows examples of what to type into the search box. Fields are case sensitive, so make sure you type the field name exactly as it appears in the table below.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
<th>Examples</th>
</tr>
</thead>
<tbody>
<tr>
<td>macroName</td>
<td>Searches for pages that contains a specific macro. Type the name of the macro in lowercase. You can use a wildcard to make sure Confluence finds the macro you're after.</td>
<td>macroName:excerpt-include*</td>
</tr>
<tr>
<td></td>
<td></td>
<td>macroName:jira*</td>
</tr>
<tr>
<td>spacekey</td>
<td>Searches for content within a specific space, using the space key. Type the name of the space key in capital letters. You can add multiple spaces using brackets and commas.</td>
<td>spacekey:MARKETING</td>
</tr>
<tr>
<td></td>
<td></td>
<td>spacekey:(IT, MARKETING)</td>
</tr>
<tr>
<td>title</td>
<td>Searches for content with specific words in the title.</td>
<td>title:&quot;product roadmap&quot;</td>
</tr>
</tbody>
</table>
| type        | Searches for content of a particular type. You can use the following content types in your query:  
|             | • page  
|             | • blogpost  
|             | • attachment  
|             | • comment (only supported when using advanced search).                      | type:attachment                              |
|             |                                                                             | type:blogpost                                |
| labelText   | Searches for content containing a specific label. If the label has a hyphen, include it within double quotes. | labelText:roadmap                            |
|             |                                                                             | labelText:"product-roadmap"                 |

For more information about search fields, see Confluence Search Fields.

Confluence Search Fields

This page gives an overview of the Apache Lucene search fields used in
Filter with CQL

Before you dive into learning more about Lucene fields, you may want to learn about the powerful search filtering offered by Confluence Query Language (CQL).

What's CQL, and how do I use it?

CQL (Confluence Query Language) is a query language developed for Confluence, which you can use in some macros and the Confluence search. Confluence search and CQL-powered macros allow you to add filters to build up a search query, adding as many filters as you need to narrow down the search results.

Use the Add a filter link to add more filters to your query.

Use AND, OR, and NOT operators

- For an OR search, specify multiple values in the same field. So to show pages with 'label-a', 'label-b' or both you'd put 'label-a' and 'label-b' in the same Label field, like this:

  ![Label filter](image)

- For an AND search, add more than one filter and specify a single value in each. To show only pages with label-a and label-b you'd put 'label-a' in one label field, then add a second Label field to the macro, and put 'label-b' in the second one, like this:

  ![Label filter](image)

Put simply, OR values are entered in the same filter, AND values are entered in different filter. Only some filters support AND. If the filter doesn't support the AND operator, you won't be able to add that filter more than once.

- For a NOT search, enter a minus sign (-) before the label. This'll exclude everything with that label.

You can use the following CQL filters to build your query:

<table>
<thead>
<tr>
<th>Filter</th>
<th>Description</th>
<th>Operators</th>
</tr>
</thead>
<tbody>
<tr>
<td>Label*</td>
<td>Include pages, blog posts or attachments with these labels.</td>
<td>OR (multiple values in the same filter) AND (multiple Label filters)</td>
</tr>
<tr>
<td>Filter</td>
<td>Description</td>
<td>Example</td>
</tr>
<tr>
<td>--------</td>
<td>-------------</td>
<td>---------</td>
</tr>
<tr>
<td><strong>With ancestor</strong></td>
<td>Include pages that are children of this page. This allows you to restrict the macro to a single page tree.</td>
<td>OR (multiple values in the same filter)</td>
</tr>
<tr>
<td><strong>Contributor</strong></td>
<td>Include pages or blog posts that were created or edited by these people.</td>
<td>OR (multiple values in the same filter)</td>
</tr>
<tr>
<td><strong>Creator</strong></td>
<td>Include items created by these people.</td>
<td>OR (multiple values in the same filter)</td>
</tr>
<tr>
<td><strong>Mentioning user</strong></td>
<td>Include pages and blog posts that @mention these people.</td>
<td>OR (multiple values in the same filter)</td>
</tr>
<tr>
<td><strong>With parent</strong></td>
<td>Include only direct children of this page (further sub-pages won't be included).</td>
<td>EQUALS (one page only)</td>
</tr>
<tr>
<td><strong>In space</strong></td>
<td>Include items from these spaces.</td>
<td>OR (multiple values in the same filter)</td>
</tr>
<tr>
<td><strong>Including text</strong></td>
<td>Include items that contain this text.</td>
<td>CONTAINS (single word or phrase)</td>
</tr>
<tr>
<td><strong>With title</strong></td>
<td>Include items that contain this text in the title.</td>
<td>CONTAINS (single word or phrase)</td>
</tr>
<tr>
<td><strong>Of type</strong></td>
<td>Include only pages, blogs or attachments.</td>
<td>OR (multiple values in the same filter)</td>
</tr>
</tbody>
</table>

* This field is required in CQL-powered macros.

** You can add these filters in CQL-powered macros but in search they're part of the standard search filters, so they don't appear in the Add a filter menu.

**Searching for content in specific fields**

Confluence data is stored in fields which can be specified in the search. To search a specific field, type the name of the field followed by a colon `:` and then the term you are looking for. For example:

```
title:"Some Title"
```

```
labelText:chalk
```

The field specification applies only to the term directly preceding the colon. For example, the query below will look for "Some" in the title field and will
search for "Heading" in the default fields.

```
    title:Some Heading
```

To learn more about using Confluence search fields in an advanced search query, head to Confluence Search Syntax.

Confluence search fields

Below are the fields which can be searched, listed by content type.

Notes

To find out the version of Lucene Confluence is using go to <installation directory>/confluence/WEB-INF/lib and locate the Lucene jar files. The Lucene version number will be part of the filename.

Search the People Directory

The people directory displays a list of people who are authorized to log in to your Confluence site (they have the 'Can Use' global permission).

The people directory includes anybody who has logged into Confluence or who has had a user account created for them in Confluence.

The people directory does not include users who can log into Confluence using external user management if they have never yet logged in.

View the people directory

Choose People at the top of the screen.

Search for people

To search for a particular person, type their first name and/or last name into the search box and choose Search.

- To see everyone who uses your Confluence site, choose All People.
- To see just those people who have set up a personal space, choose People with Personal Spaces.

Follow people’s activities

Confluence’s network features allow you to ‘follow’ (that is, keep track of) other people’s activities in your Confluence site. For more information, please refer to Network Overview. You can use the hover profile feature in the people directory to start following other people.

- To start following someone, move your mouse over their name or profile picture and choose Follow in their profile popup.
- To stop following someone, move your mouse over their name or profile picture and choose Stop Following in their profile popup.

Once you start following another person, their activities will start appearing in your network view.

Screenshot: The people directory
The **people directory** uses the hCard microformat for simple integration with a variety of microformat-enabled tools. hCard is an open data format for representing people, companies, organizations, and places. Read more about [microformats](https://microformats.org) and hCard.

**By default, deactivated users (disabled user accounts) are excluded from the people directory. You can include them by adding the `showDeactivatedUsers` parameter to the URL. For example:**

```
http://my.confluence.com/dopeopledirectorysearch.action?showDeactivatedUsers=true
```

**Any user who does not have the 'Can Use' Confluence global permission won't appear in the People directory (for example, Jira Service Desk customers who can view KB articles, but do not have a Confluence license).**

**By default, externally deleted users (for example, users deleted from an LDAP repository) are excluded from the people directory. You can include them by adding the `showExternallyDeletedUsers` parameter to the URL. For example:**

```
http://my.confluence.com/dopeopledirectorysearch.action?showExternallyDeletedUsers=true
```

**The Confluence administrator can hide the people directory. If it is hidden, you will not see the People Directory option.**

### Recently Viewed Pages and Blog Posts

The **Recently Viewed** list in Confluence keeps track of pages and blog posts you've recently visited, and allows you to easily navigate back to them.

**To view your recently viewed content:**

1. Choose your profile picture at top right of the screen, then choose Recently Viewed
2. Choose the title of the page you want to revisit

To filter the list, type part of a page title or user's name in the **Filter** field.

Your last ten recently viewed pages also appear when you click in Confluence's **Search** field before you start typing a search query.
Permissions and restrictions

As a tool for communication and collaboration, we believe Confluence is at its best when everyone can participate fully. Confluence keeps a history of all changes to pages and other content, so it's easy to see who has changed what, and reverse any changes if you need to.

Confluence does, however, give you the choice to make your site, spaces, and pages as open or closed as you want to.

Levels of permission

There are three levels of permissions in Confluence: Global permissions, space permissions, and page restrictions.

Global permissions

Global permissions are site-wide permissions, and can be assigned by either a System or Confluence administrator.

These permissions are pretty broad, and don't really interact with space permissions or page restrictions.
For full details, check out the overview of global permissions in the Administrator's Guide.

Space permissions

Every space has its own independent set of permissions, managed by the space admin(s), which determine the access settings for different users and groups.

They can be used to grant or revoke permission to view, add, edit, and delete content within that space, and can be applied to groups, users, and even to anonymous users (users who aren't logged in) if need be.

One thing to watch out for is where a user is a member of multiple groups. You may have revoked permission for that individual user to add pages, for example, but if they're a member of a groups that is allowed to add pages, they'll still be able to create new pages in the space.

If you can't get the result you want from space permissions, or you're not sure, check with one of your Confluence administrators to determine what permissions you should apply to individuals and groups.

Page restrictions

Page restrictions work a little differently to global and space permissions. Pages are open to viewing or editing by default, but you can restrict either viewing or editing to certain users or groups if you need to. Page restrictions can be applied to published or unpublished pages and blog posts (drafts).

Don't forget, every page in Confluence lives within a space, and space permissions allow the space admin to revoke permission to view content for the whole space. Even the ability to apply restrictions to pages is controlled by the 'restrict pages' space permission.

How do permissions and restrictions interact?

You can restrict viewing of a page or blog post to certain users or groups, so that even if someone has the 'view' permission for the space, they won't be able to view the content of the page or blog post.

If someone's a space admin and you've used page restrictions to prevent them viewing a page, they won't be able to see the page when they navigate to it. As a space admin though, they can see a list of restricted pages in the space and remove the restrictions.

What about links?

Space permissions and page restrictions affect how links between Confluence pages are displayed.

- If someone doesn't have 'View' space permission, links to pages in that space will be visible, but they'll get a "page not found" message. The space key is not revealed in the link URL.
- If someone has the "View" space permission, but the page has view restrictions, the link will be visible but they'll get an "access denied" message when they click the link.

Links to attachments are also affected. If the visitor doesn't have permission to view the page the attachment lives on, the link won't be rendered.

Confluence Groups

For Confluence administrators, grouping users in Confluence is a great way to cut down the work required when managing permissions and restrictions. Groups are also very useful, however, to anyone who's a space admin, or can apply page restrictions.

If you're a space admin, you can assign a set of spa
confluence permissions to a group rather than to each individual user. And as a page creator with 'Add/Delete Restrictions' permission, you can also add and remove page restrictions for groups.

Default Confluence groups

There are some default groups in every Confluence instance but, beyond that, Confluence administrators are free to set up and edit groups in any way they see fit.

The two special groups in Confluence are:

- **confluence-administrators** — Can perform most of the Confluence administrative functions, like assign permissions to other users, but they can't perform any functions that could compromise the security of the Confluence system. They can also access the Confluence Admin console.
- **confluence-users** - this is the default group into which all new users are assigned. Permissions defined for this group will be assigned to all new Confluence users.

Anonymous Users

All users who don't log in when they access Confluence are known as 'anonymous' users. By default, anonymous users don't have access to view or change any content in your Confluence instance, but Confluence admins can assign permissions to this group if it's required.

Unlicensed users from linked applications

If you're using Confluence as a knowledge base for Jira Service Desk, your Jira Service Desk administrator can choose to allow all active users and customers (that is logged in users who do not have a Confluence license) to view specific spaces.

These users have very limited access, and cannot be granted permissions in the same was as an individual or group. However, it's important to note that this permission overrides all existing space permissions, so any logged in Confluence user will also be able to see the space (regardless of their group membership). This is due to the way Confluence inherits permissions.

Add-ons and integrations

Confluence has a wide range of features on its own, but you can also extend those features with Marketplace apps, and by integrating Confluence with other applications. Integrating with Jira applications can really take your Confluence experience to the next level by improving the way your teams track vital work, and plan and release new products.

If there's an extra piece of functionality you need, the Atlassian Marketplace is the place to look for useful Confluence apps. Whether you need to create...
diagrams, like the ones you can create with Gliffy, or you want to make awesome mockups and wireframes with Balsamiq, there are heaps of great apps in the marketplace. You may even find a really useful app you never knew you needed, but now can't live without.

In this section:
- Use Jira applications and Confluence together
- Use Hipchat and Confluence together
- Request Marketplace Apps
- Use a WebDAV Client to Work with Pages
- Mail Archives
- Gadgets

Use Jira applications and Confluence together

Confluence and Jira are like bacon and eggs; coffee and cake; Simon and Garfunkel. Separately, they're great, but together, they're amazing!

If your Confluence and Jira sites are connected using Application Links, you can display and create Jira issues and more from within Confluence.

What you can do with Confluence and Jira depends on the Jira application and version you have. Find out about the required applications and versions later in this page.

For every project or team

Display issues on a page

You can display Jira issues on a Confluence page using the Jira Issues macro. Display a single issue, a list of issues, or show the total number of issues.

The simplest way to add a Jira issue to Confluence is to paste a Jira URL on a Confluence page.  

Here's some examples...

- `<yourjirasite.com>/browse/CONF-1234` will insert the Jira Issues macro and display a single issue.
- `<yourjirasite.com>/issues/?filter=56789` will insert the Jira Issues macro and display a list of issues matching the saved filter.
- `<yourjirasite.com>/issues/?jql=project%20%3D%20CONF` will insert the Jira Issues macro and display a list of issues matching the Jira search.

Alternatively, you can add the Jira Issues Macro to the page and search for issues directly:

1. In the editor choose Insert > Jira Issue.
2. Follow the prompts in the macro browser to choose a project and search for an issue – you can even use JIRA Query Language (JQL).
Once you've added the macro, you can customize how the issue or list of issues appears on the page, including how much information to display, how many issues, and more.

<table>
<thead>
<tr>
<th>Key</th>
<th>Summary</th>
<th>Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>CONF-26791</td>
<td>PDF Export Table Hidden by Margin</td>
<td>RESOLVED</td>
</tr>
<tr>
<td>CONF-35648</td>
<td>Roadmap time period only showing months</td>
<td>RESOLVED</td>
</tr>
<tr>
<td>CONF-25646</td>
<td>Automated row numbering in tables</td>
<td>RESOLVED</td>
</tr>
</tbody>
</table>

Create reports and charts

Reporting on information stored in Jira is simple in Confluence. In addition to the Jira Issues Macro, you can use the Jira Report blueprint or Jira Chart macro to show information from your Jira application visually. It's the best way to give your stakeholders a snapshot of your team or project's progress.

You can:

- Use the JIRA Report blueprint to create a Change Log or Status report.
- Use the Jira Chart Macro to display data as a chart, including pie charts, created vs resolved, and two dimensional charts.
- Use JIRA Gadgets to display detailed Jira reports and charts on pages.

Create issues from inside Confluence

You can create issues while viewing a page or from the within the editor. This is really useful if you use Confluence for planning and gathering requirements.

To create an issue when viewing a page:

1. Highlight some text on your page and choose the

   ![Create Jira issue icon](image)

   2. Enter your server (if you have multiple Jira sites connected to Confluence), project, issue type and description. Your highlighted text will populate the issue summary automatically.

3. Choose Create.

The issue will be created in Jira and added to your page. If your text is in a table, you'll have the option to create multiple issues using text from the same column.

If you don't see a popup when you highlight text, check that Text Select is enabled in your profile settings.

To create an issue in the editor:

1. In the editor choose Insert > Jira Issue > Create new issue.

2. Enter your server (if you have multiple Jira sites connected to Confluence), project, issue type, summary, and description.

3. Choose Insert.

The issue will be created in Jira and added to your page.

There are some limitations when creating Jira issues from Confluence. The Jira Issues macro or Create Jira Issue dialog will notify you if it's unable to create an issue in the selected project. You can find out more in the Jira Issues Macro page.
Move between Jira and Confluence

Whenever you add a link to JIRA issues in Confluence, or link to a Confluence page from your Jira application, the **Jira Links** button appears at the top of the Confluence page. This makes it really easy to jump from Confluence to Jira and vice versa, speeding up your workflow.

The number on the Jira Links button indicates the total number of issues, epics, and sprints connected to that page, regardless of whether you have permission to view them. The dropdown, however, will only show details of issues, epics, and sprints that you have Jira permissions to view.

The button doesn’t detect links from issues displayed in the Jira Issues macro in table format.

For software teams

Here’s some suggestions to help you get the most out of Confluence and Jira Software and unleash the potential in your agile development team.

Define your requirements

Confluence is the perfect place to start defining your requirements. You can use the **Product Requirements Blueprint** to capture your requirements, then create your Jira epic and other issues right from the requirements page in Confluence.

Here’s how it works:

1. Create a Confluence page using the **Product Requirements Blueprint**.
2. Choose the placeholder text ‘Link to Jira epic or feature’ and choose **Create new issue** to create your epic in Jira.
3. Collaborate with your team to define your stories and save the page.
4. Highlight text on your requirements page and choose the **Create Jira issue** link to create stories in Jira, and automatically link them to your epic.
5. Track the progress of the stories from the Confluence page or from within Jira.
The tight integration between Confluence and Jira Software means you can easily access issues from the Confluence page and see their status at a glance, and from within Jira Software you can see links to related Confluence pages. All the information you need is right there.

Manage your sprints

There's often a lot of material in Confluence that provides useful context for your team during a sprint. These might be requirements documents, designs, tech specs, customer research and more. By linking these pages to epics, you make them easy for your team to find during the sprint.

Here's how you can use Confluence to support your sprint from within Jira Agile:

- In Jira Software, create a Confluence page to plan your sprint. The page is created using the Meeting Notes Blueprint – a handy template that helps capture the details you need – and is automatically linked to the sprint.
- In an epic, link to useful Confluence pages, including requirements, designs, and more.
- Report on your progress to stakeholders using the JIRA Report blueprint in Confluence.
- Use the Retrospective Blueprint in Confluence at the end of your sprint to take stock of what went well and not so well.

For people who work mostly in Jira Software, the integration means that useful Confluence pages are only a click away.

For service desk teams

Provide self help resources for your customers

If you use Jira Service Desk, you can help your customers resolve their issues without creating a request by connecting your Service Desk project to a knowledge base in Confluence. You'll need Confluence 5.10 or later.

If you use Jira Service Desk Cloud, you won't be able to connect your project to a knowledge base space on a Confluence Server or Data Center site. You can only connect to a Confluence Cloud site. Read about how to migrate from Confluence Server to Cloud.

In Service Desk, head to Project settings > Knowledge base to connect or create a Confluence space.

When Service Desk customers search in the Customer Portal, pages in the linked knowledge base space will be suggested, allowing customers to help themselves.
Create knowledge base articles

The Knowledge Base space blueprint, along with templates for how-to and troubleshooting articles make creating new knowledge base articles super simple for your Service Desk agents.

The templates used in the how-to and troubleshooting blueprints are completely customizable too. Set up the template with all your standard information and let your agents take it from there.

Allow any active user to see knowledge base spaces

If your Confluence instance is not public, you can still make a knowledge base space available via the customer portal.

When you link your Jira Service Desk project to a Confluence space, you can choose to allow all active users and customers to see pages in the linked space, even if they don’t have a Confluence license. These people get very limited Confluence access.

Unlicensed users can:

- View pages via the Jira Service Desk customer portal.
- Follow a URL to a page and then navigate within the linked space.

Unlicensed users can’t:

- Like, comment on or edit pages (or be granted permission to do this).
- See the dashboard, user profiles, the people directory or space directory.
- Search the whole site.

This permission can only be enabled via Jira Service Desk, but you can revoke access to the whole site or to particular spaces via Confluence’s global permissions or space permissions.

A note about Confluence permissions...

Allowing all active users and customers to view a space will override all existing space permissions, so any logged in, licensed Confluence user will also be able to see the space (regardless of their group membership). This is due to the way Confluence inherits permissions.

Jira applications required

As you’ve seen, Confluence has many integration points, some of which are only available in particular Jira applications or versions.

This matrix outlines the specific Jira applications you’ll need for each feature. We’ve also included the minimum legacy Jira Server version (plus any add-ons) that you’ll need if you’re not using the latest Jira applications.

<table>
<thead>
<tr>
<th>Feature</th>
<th>Jira Core</th>

</table>
Display issue and project information using the Jira Report blueprint

Create an issue from Jira issues macro

Create issues by highlighting text on a Confluence page

Create issue by highlighting text on a Confluence page and automatically link issues to an epic

Link and create Confluence pages from epics and sprints

View linked issues with the Jira links button in Confluence

Create a space using the Software Project space blueprint

Use a Confluence space as a knowledge base in the customer portal

Allow Service Desk customers to view knowledge base articles without a Confluence license

Search for an existing Confluence page within the Jira link dialog

Delegate user management to Jira

Add a Jira gadget to a Confluence page

That's it? Time to jump into Confluence and give some of these great features a try with your team or project. Want to find out more about how to connect your Jira application to Confluence? Check out Integrating Jira and Confluence.

Use Hipchat and Confluence together

Hipchat is a group messaging and video chat app for team communication.

Connect a Confluence space to a Hipchat room to get instant updates about changes in the space, send realtime notifications to the room, and share what you've been working on with your team.

Don't have Hipchat yet? Sign up for free and start chatting right away.

Connect Confluence and Hipchat

You'll need to be a site admin with global permissions for both Confluence and Hipchat to set up the initial connection between Confluence and your Hipchat group. Go to

> General Configuration > Hipchat Integration and choose Connect Hipchat.

On this page:
- Connect Confluence and Hipchat
- Connect spaces to rooms
- Send space notifications to Hipchat
- Get Confluence in your Hipchat sidebar
- Need to chat? See from Confluence if someone's online on Hipchat
- Spice up your pages with Hipchat emoticons
- Create Hipchat rooms from Confluence
- Invite users to Hipchat from Confluence

Connect spaces to rooms
If you’re a space admin, connect your space to a Hipchat room by going to Space Tools > Integration > Hipchat and selecting which rooms you’d like to connect. A space can be connected to as many Hipchat rooms as you like, and a Hipchat room can be connected to multiple spaces.

Send space notifications to Hipchat

When choosing which rooms to connect, you can also choose which notifications you’d like to send to each room.

1. **Pick a room**: choose a Hipchat room to send notifications to.
2. **Decide what to send**: select the type of notifications to send to the room.

Notifications appear in realtime, and clicking on them takes you straight to Confluence.

You can choose different notification settings for each space-room connection. A design team working on a specific project could choose to get updates from that project’s space whenever a page is updated, so they can keep close track of its progress. From their team space, though, they might choose to be notified only when there’s a new blog post, so they’re up to date on important team news but don’t get interrupted by any other changes in that space.

Change the notification settings whenever you like by going to Space Tools > Integration > Hipchat, and clicking on **Edit Notifications** next to the room name.

**Permissions and restrictions**

Want to keep something private? Don’t worry, rooms are never notified about the creation or update of any content with view restrictions on it.

**Get Confluence in your Hipchat sidebar**

Find content you’ve viewed or worked on in Confluence in your Hipchat sidebar, so you can easily resume, share or discuss work with your team. Once a space has been linked to a room, you can find this in your sidebar either under the space name or, if you have multiple spaces linked to your room, under the name of your instance.

Select the name of your space or instance, then follow the prompts to authenticate your account. This will let you open up a Confluence glance in your sidebar. Switch tabs to view either all **Updates** from the space linked to that room, or **My Work** from across Confluence.

The **My Work** tab lets you filter all the content from Confluence that you’ve been **Mentioned in, Recently**
Worked on, Recently Visited or Saved for later. Now, when you want to share an important piece of information with your team, ask them to review your work or collaborate with you, you can find and link them to relevant content directly from Hipchat.

Need to chat? See from Confluence if someone’s online on Hipchat

Got questions about something someone else has worked on? Once your Confluence instance is linked to your Hipchat group, you can hover over a user mention or a byline in Confluence to see if the user is available in Hipchat. Green for available, yellow for away, or red for do not disturb.

Spice up your pages with Hipchat emoticons

In the editor go to Insert > Emoticons to bring your pages to life with emoticons. You can also type them right into the editor like this (success).

All Hipchat's default emoticons can be found here, along with any custom ones people in your organization have added.

Create Hipchat rooms from Confluence

Setting up a new team or project? Create a new Hipchat room at the same time, through Confluence. If you're a space admin, go to Space Tools > Integration > Hipchat and instead of selecting an existing room in the dropdown, type in the name of the new room you want to create and hit Add.

Invite users to Hipchat from Confluence

If you're a global admin for both Confluence and Hipchat, you can send users Hipchat invites directly from Confluence. Go to

> General Configuration > Hipchat Integration > Invite users to Hipchat.

You'll need at least one space integrated with a room to see the Invite users link.

Request Marketplace Apps

The Atlassian Marketplace website offers hundreds of apps that the administrator of your Atlassian application can install to enhance and extend Confluence. If the app request feature is enabled for your Confluence instance, you can submit requests for apps from the Marketplace to your Confluence administrator.

The 'Atlassian Marketplace for Confluence' page provides an integrated view of the Atlassian Marketplace from within your Confluence instance. The page offers the same features as the Marketplace website, such as searching and category filtering, but tailors the browsing experience to Confluence.

This in-product view of the Marketplace gives day-to-day users of the Atlassian applications, not just administrators, an easy way to discover the apps that can help them work. When you find an app of interest, you
can submit a request with just a few clicks.

Submit an app request

To browse for add-ons in the Atlassian Marketplace, follow these steps:

1. Choose your profile picture at top right of the screen, then choose Atlassian Marketplace.
2. In the Atlassian Marketplace page, use the search box to find apps or use the category menus to browse or filter by type, popularity, price or other criteria. You can see what your fellow users have requested by choosing the Most Requested filter.
3. When you find an app that interests you, click Request to generate a request for your administrator.
4. Optionally, type a personal message to your administrators in the text box. This message is visible to administrators in the details view for the app.

5. When ready, click Submit Request.
6. Click Close to dismiss the 'Success!' message dialog box.

At this point, a notification appears in the interface your administrators use to administer apps. Also your request message will appear in the app details view, visible from the administrator's 'Find New Apps' page. From there, your administrator can purchase the app, try it out or dismiss requests.

Update an app request

After submitting the request, you can update your message at any time. Click the Update Request button next to the listing in the Atlassian Marketplace page to modify the message to your administrator.

The administrator is not notified of the update. However, your updated message will appear as you have modified it in the details view for the app immediately.

Use a WebDAV Client to Work with Pages

Create, move and delete pages and attachments in Confluence using a file manager like Finder (OS X), Explorer (Windows) or Dolphin (Linux) or other WebDav compatible local client like CyberDuck.

For example, if you need to delete a lot of pages you can bulk delete them in your local file manager (like Finder or Explorer), rather than one by one in your browser.

Access to Confluence through a native client is provided by the WebDav plugin. Your administrator may have disabled the WebDav plugin, or may have restricted the actions that you can perform using a local client. See Configuring a WebDAV client for Confluence for more information on how to set it up.

Manage pages and files in a native client
Accessing Confluence through a native client is useful for performing bulk actions. Before you can start creating and moving things around, it’s useful to understand how the content is organized.

The hierarchy in the file system looks like this:

- Type of space (global or personal)
  - Space (folder name is the spacekey)
    - Homepage (and other top-level pages)
      - Child pages (folder name is the name of the page)
    - Attachments (filename of the attachment)

Essentially the file structure is the same as the page tree in your space. Here’s how the Confluence demonstration space looks in Finder.

1. Space key
2. Page title
3. Attached file

Here’s some things you might choose to do in a local client, rather than in your browser:

- **Move pages to another space**
  Select the page folders, and drag them into the other space’s folder (drag them from Space A to Space B)

- **Delete multiple pages**
  Select all the page folders you want to delete and delete them.

- **Delete multiple attachments from a page**
  Navigate down to the page folder, select the attachments you want to delete and delete them.

- **Upload multiple attachments**
  Navigate to the page folder, and drag the files into the folder (note you can attach multiple files through the insert dialog as well).

**Mail Archives**

Confluence allows you to collect and archive mail within each space. It’s useful for storing the email messages that relate to a particular project – you can put them in the same Confluence space as the content for that project.

You can download mail from one or more POP or IMAP accounts, or import mail from an mbox file on your local system or on the Confluence server.

You need space administration permissions to manage the mail archives.

Confluence mail archiving is an optional feature. This means that the ‘Mail’ options may be disabled and will therefore not appear in the Confluence user interface. Mail archiving features are contained in a system app. To activate mail archiving features in Confluence, enable the app – go to...
To see archived mail:

- Go to a space and choose **Space tools > Integrations > Mail**
- Choose a message to see its contents, or choose **Next, Previous** and other options to navigate around the mail archives.

**Manage mail archives:**

- **Add a Mail Account**
- **Delete and Restore Mail**
- **Import Mail from an mbox**

**Screenshot: Viewing a message in the mail archive**

**Notes**

- Only **site spaces** – not personal spaces – can store mail archives. See **Spaces** for information on site and personal spaces.
- You can also search the mail messages and their attachments. See **Search**.
- Confluence mail archiving is an optional feature. This means that the 'Mail' options may be disabled and will therefore not appear in the Confluence user interface. Mail archiving features are contained in a system app. To activate mail archiving features in Confluence, enable the app – go to
  > **Manage apps** then choose **System** in the drop down, and enable the **Confluence Mail Archiving Plugin**.

**Add a Mail Account**

When you add a mail account, you're configuring Confluence to download mail from that account and archive it within the space.

You need space administration permissions to add a mail account. See **Space Permissions Overview**.

**Note:** Confluence will remove email messages from an email account when it transfers them to the mail archive. You must therefore configure Confluence to poll a **clone** email account rather than the actual account. For example, to archive the actual account **sales@company.com** to your Confluence Sales space, you must first create a clone account such as **conf-sales@company.com** that contains the same email content.
Step 1. Create a clone email account on the mail server

1. Add a new email account on the mail server with the clone email address.
2. Copy all existing email messages from the actual account to the clone account.
3. Set up the actual account to bcc sent email messages to the clone account.
4. Set up the actual account to forward received email messages to the clone account.

Step 2. Configure Confluence to archive the clone account

1. Go to the space and choose Space tools > Integrations from the bottom of the sidebar.
2. Choose Mail Accounts > Add mail account.
3. Enter configuration details for the account:
   - **Account Name**: Enter a name for this account by which it will be known in Confluence.
   - **Description**: Provide a description for this account (optional).
   - **Protocol**: Choose from POP, IMAP, POPS or IMAPS.
   - **Hostname**: Enter the host name of the mail server on which the account resides.
   - **Port**: Don't edit this field. The mail server's port number will be displayed by default.
   - **Username**: Enter a username that has permission to retrieve mail from this account.
   - **Password**: Enter the account's password.
4. Choose Test Connection to verify the details
5. Choose Create to add the account to Confluence
For each mail account you add, you can perform these actions in the **Mail Accounts** tab:

- **Edit**: Change the configuration settings for the mail account.
- **Remove**: Remove the account permanently.
- **Disable/Enable**: Temporarily disable the account, or enable a disabled account.

**Fetching Mail**

Confluence automatically fetches mail from the server once every 30 minutes. You can manually retrieve new mail from the configured mail accounts by selecting the **Mail** tab and choosing **Fetch new mail**.

ℹ️ You need to be a space administrator to manually retrieve mail. See **Space Permissions**.

**Notes**

- Only **site spaces** – not personal spaces – can store mail archives. See **Spaces** for information on site and personal spaces.
- Confluence mail archiving is an optional feature. This means that the 'Mail' options may be disabled and will therefore not appear in the Confluence user interface. Mail archiving features are contained in a system app. To activate mail archiving features in Confluence, enable the app – go to > **Manage apps** then choose **System** in the drop down, and enable the **Confluence Mail Archiving Plugin**.
- Once mail is fetched it will be removed from the server.

**Delete and Restore Mail**

To delete mail from a space, you need 'Delete Mail' permission.

ℹ️ Only a space administrator can delete all email messages in the space simultaneously.

**To delete mail from a space:**

1. Go to a space and choose **Space tools** > **Integrations** > **Mail**
   
   A list of email messages in the space is displayed in reverse chronological order.
2. Do either of the following:
   - Delete an individual email message by choosing the trash icon beside it.
   - Delete all email messages within the space by choosing Delete All.

⚠️ Email messages deleted using the 'Delete All' option can't be restored.

Space administrators can restore deleted email messages, provided they were deleted individually.

To restore deleted mail:
1. Go to the space and choose Space tools > Content Tools from the bottom of the sidebar.
2. Choose Trash
   You'll see a list of email messages and other content deleted from the space.
3. Choose Restore beside the email message you want to restore.

Import Mail from an mbox
Confluence allows you to import mail from mbox files located either on your local system or in a specified location on the Confluence server. Confluence will store the imported email messages in the space's mail archive.

You need to be a space administrator to import mail for a space. See Space Permissions.

NB: You may need to enable the Confluence Mail Archiving Plugin as it is disabled by default.

To import mail from an mbox file:
1. Go to the space and choose Space tools > Integrations from the bottom of the sidebar.
2. Choose Mailbox Import.
   - To import from a location on your file system: Browse to the location of the mbox file, select the file and then choose Import.
   - To import from the Confluence server: Enter the location of the mbox file on the server, then choose Import.

Notes
- Only site spaces can store mail archives. Personal spaces cannot. See Spaces for an explanation of site spaces and personal spaces.
- Confluence mail archiving is an optional feature. This means that the 'Mail' options may be disabled and will therefore not appear in the Confluence user interface. Mail archiving features are contained in a system app. To activate mail archiving features in Confluence, enable the app – go to > Manage apps then choose System in the drop down, and enable the Confluence Mail Archiving Plugin.
- For security reasons mail can only be imported from a specified location in the Confluence server's file system. We recommend administrators create a folder in their Confluence home directory, add the system property confluence.mbox.directory and specify the location for mailboxes to be imported from. Mail cannot be imported from the server until this system property is set. See Configuring System Properties.

Gadgets
Gadgets allow you to add dynamic content to a Confluence page or Jira application dashboard. Confluence can display gadgets that support the OpenSocial specification, including third party gadgets.

For more information about Atlassian gadgets, see the introduction to Atlassian gadgets and the big list of Atlassian gadgets.

To see a list of available gadgets in your Confluence site go to Help > Available Gadgets.
The following gadgets are bundled with Confluence.

<table>
<thead>
<tr>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Confluence Page Gadget</strong></td>
<td>The Confluence page gadget allows you to show content from a page on your Confluence site in a gadget. You can optionally configure the gadget to display links to view and/or edit the page on your Confluence site. The page gadget can also be displayed in canvas view, so that it takes up all of the space provided by your dashboard.</td>
</tr>
<tr>
<td><strong>Activity Stream Gadget</strong></td>
<td>The activity stream gadget is similar to the recently updated macro and shows a list of the most recently changed content within your Confluence site.</td>
</tr>
<tr>
<td><strong>Confluence News Gadget</strong></td>
<td>The Confluence news gadget is an example of a 'news feed' gadget that shows a list of recent Confluence Product Blogs and events at Atlassian.</td>
</tr>
<tr>
<td><strong>Confluence QuickNav Gadget</strong></td>
<td>The QuickNav Gadget allows you to add the quick navigation functionality to search your Confluence site.</td>
</tr>
</tbody>
</table>

**Add a Confluence gadget to a page**

Where a similar result can be achieved using standard Confluence macros (for example using the Include Page Macro instead of Confluence Page Gadget), we recommend using macros as they have better performance and are easier to configure than gadgets.

To add a Confluence gadget to a page:

- In the editor go to Insert > Other Macros.
- Select the gadget you wish to add, and use the preview area to configure the gadget.
- Choose Insert.

See Gadget Macro for more information on adding the macro to your page, configuring the gadget itself and display options.

**Add a Jira gadget to a page**

For displaying basic Jira information, such as issues and charts, we recommend using the Jira Issues Macro and Jira Chart Macro as these macros have better performance and are easier to configure than gadgets.

If the Jira information you want to display is not available from either of these macros a gadget will likely do the trick.

To add a Jira Gadget to a Confluence page:

- In the editor go to Insert > Other Macros.
- Select the gadget you wish to add, and use the preview area to configure the gadget.
- Choose Insert.

See Gadget Macro for more information on adding the macro to your page, configuring the gadget itself and display options.

**On this page:**

- Add a Confluence gadget to a page
- Add a Jira gadget to a page
- Add a Confluence gadget to your Jira application dashboard

**Related pages:**

- Gadget Macro
- All Atlassian gadgets
- External Gadgets
display options.

If you don't see any Jira Gadgets in the macro browser, ask your Confluence administrator to add the Jira Gadget urls to the list of authorized external gadgets in Confluence, and check that the application link between Confluence and your Jira application is configured correctly.

Add a Confluence gadget to your Jira application dashboard

To add a Confluence gadget to your Jira dashboard:

1. Go to the dashboard by selecting the Dashboard link in the header.
2. On the dashboard, Click Add Gadget.
3. Use the gadget wizard to choose the gadgets you want to add.

If you don't see any Confluence gadgets in the Jira gadget directory, ask your Jira administrator to add the gadget URLs as follows.

To add a Confluence gadget to your Jira application's gadget directory:

1. In Confluence, go to Help > Available Gadgets and copy the gadget URL for the gadget you want to make available in Jira.
2. In Jira, go to the dashboard and choose Add Gadget.
3. Choose Manage Gadgets or Add Gadget to Directory (depending on your Jira application and version)
4. Paste in the Confluence gadget URL and choose Add Gadget.

The gadget will now be available from the Jira Gadget Directory.

Activity Stream Gadget

The activity stream gadget is similar to the recently updated macro and shows a list of the most recently changed content within your Confluence site.

In addition to showing a list of most recently changed content, the activity stream gadget also groups activities by separate date, and provides an RSS feed link to its content in the top-right corner.

Activity Stream Gadget Properties

Properties are settings for Confluence gadgets that allow the user to control the content or presentation of data retrieved by the gadget. These are similar to a Confluence macro's parameters. The table below lists relevant properties for this gadget.

These properties are located in the preview panel in the macro browser.

<table>
<thead>
<tr>
<th>Property</th>
<th>Required?</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Title</td>
<td>Yes</td>
<td>None</td>
<td>Adds a title to the top of the Activity Stream.</td>
</tr>
<tr>
<td>Feature</td>
<td>Default</td>
<td>Option</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------------</td>
<td>---------</td>
<td>-----------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Global filters</td>
<td>No</td>
<td>None</td>
<td>Allows you to add filters to the gadget including:</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>- space</td>

<td>Yes</td>
<td>All</td>
<td>If you have application links to other sites, Jira or another Confluence site, you can choose to include activity from those streams also.</td>
</tr>
<tr>
<td>Display options: limit</td>
<td>No</td>
<td>10</td>
<td>Specify the maximum number of results to be displayed. A maximum of 10 results will be displayed by default. The maximum value that this property can accept is 100.</td>
</tr>
<tr>
<td>Display options: Refresh Interval</td>
<td>No</td>
<td>Never/false</td>
<td>Specify the time interval between each 'refresh' action undertaken by the activity stream gadget. A refresh makes the activity stream gadget reflect any new activity that has been conducted on the Confluence site.</td>
</tr>
</tbody>
</table>

**Confluence News Gadget**

The Confluence news gadget is an example of a 'news feed' gadget that shows a list of recent Confluence Product Blogs and events at Atlassian.

Clicking an item in the Confluence news gadget takes you directly to the selected blog post of the Confluence Product Blogs feed or event details on the events at Atlassian page.

Clicking More news takes you to the Confluence Product Blogs feed page and clicking More events takes you to the events at Atlassian page.

*Screenshot: The News Gadget*
Confluence: News Gadget Properties

Properties are settings for Confluence gadgets that allow the user to control the content or presentation of data retrieved by the gadget. These are similar to a Confluence macro's parameters. The table below lists relevant properties for this gadget.

<table>
<thead>
<tr>
<th>Property</th>
<th>Required?</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Show News?</td>
<td>No</td>
<td>True</td>
<td>Shows a short list of the most recent Confluence Product Blogs.</td>
</tr>
<tr>

<td>No</td>
<td>True</td>
<td>Shows a short list of the most recent events at Atlassian.</td>
</tr>
<tr>
<td>Show Banners?</td>
<td>No</td>
<td>True</td>
<td>Shows any banner advertisements (if available).</td>
</tr>
</tbody>
</table>

Confluence Page Gadget

The Confluence page gadget allows you to show content from a page on your Confluence site in a gadget. You can optionally configure the gadget to display links to view and/or edit the page on your Confluence site. The page gadget can also be displayed in canvas view, so that it takes up all of the space provided by your dashboard.

On this page:
- Confluence Page Gadget Properties
- Working Macros

Macros that work with the page gadget

Please note, not all macros work with the page gadget. Please refer to the Working Macros section below for more information.

Screenshot: The Confluence page gadget displaying a sample page
Confluence Page Gadget Properties

Properties are settings for Confluence gadgets that allow the user to control the content or presentation of data retrieved by the gadget. These are similar to a Confluence macro's parameters. The table below lists relevant properties for this gadget.

<table>
<thead>
<tr>

| Widget Connector | N/A | Only works for some content:  
- **Works**: blip.tv, Episodic, Flickr, Google Calendar, presentations on Google Docs, MySpace Video, Scribd, Skitch.com, SlideRocket, SlideShare, Viddler, Vimeo, YouTube, Dailymotion, Metacafe, FriendFeed, Yahoo Video, Wufoo HTML Form Builder  
- **Does not work**: FriendFeed, Google Gadgets, Google Video (consumer service discontinued), Twitter, Widgetbox, DabbleDB, BackType |

**Confluence QuickNav Gadget**  
The QuickNav Gadget allows you to add the quick navigation functionality to search your Confluence site.  
To search Confluence using a QuickNav Gadget, type the name of a page, blog post, person, file, or space into the search box, and choose from the list of results displayed.  
If you don’t immediately see what you need, hit **Enter** or choose the 'Search for' option at the bottom of the search results to go to the advanced search page. Learn more about searching Confluence.

**Screenshot: Using the QuickNav Gadget**

You can also search for administrative options in the QuickNav Gadget. For example, type 'general' into the search field to go to the General Configuration screen.
More information about the QuickNav Gadget:

- The QuickNav Gadget returns matches based on the title only, not the content of the page or file.
- Matching items are grouped by type, so that you can quickly find the type you want. Confluence shows a maximum of 3 admin options, 6 pages and/or blog posts, 2 attachments, 3 people and 2 spaces.
- Items are ordered with the most recently updated first.
- Permissions determine the admin options that appear in the search results. You'll only see the options you have permission to perform.

Confluence QuickNav Gadget Properties

This gadget has no properties and cannot be customized.

Confluence use-cases

This section describes some specific use cases for Confluence.

Develop Technical Documentation in Confluence

Confluence is a flexible platform with a range of features and Marketplace apps that can help you capture, distribute, and update your technical documentation. Below are some tips to help you get your technical documentation site started, and to save you time and effort managing your documentation's life cycle.

Create your Documentation Space

Creating spaces in Confluence is quick and easy. All you need to do to get your documentation started is choose Spaces > Create space from the Confluence header. To make things even easier, choose the 'Documentation Space' option in the create space dialog; it'll give you a custom home page with a search box (the livesearch macro) to search just your documentation space, a recently updated macro, and a few other goodies.
Give your space a name, and Confluence will automatically create the home page and space key for it (change the space key if you’re not happy with the one Confluence chooses for you). Feel free to customize the home page at any time; what it looks like is completely up to you!

Save time by re-using content

If there’s something you’re going to use multiple times in your documentation space – whether it’s a word, sentence or paragraph; an image; a product version number; or anything else – you can create it once and include it on as many pages as you like (or use it in the header and/or footer). Inclusions not only save you typing the same thing many times, they also make it easier when things change – it’s much better to update the info in one place, than 47!

There are 3 macros that allow you to re-use content:

- The **Excerpt macro** to define a re-usable section, or 'excerpt', on a page – add content inside this macro, and you can reuse it on as many pages as you like.
- The **Excerpt Include macro** (excerpt-include) to include the contents of an excerpt on another page.
- The **Include Page macro** (include) to include the entire content of a page on another page.

For example, let’s say you create release notes for each major release of your product, and you want to include the intro from each release notes page on a ‘what's new’ page. Place each release notes intro in an Excerpt macro, then add an Excerpt Include macro for each set of release notes to the what's new page. Your intros will magically appear on the what's new page, and if you update the release notes it'll automatically update the what's new.
1. **Excerpts**: the intros to these pages are in excerpt macros.
2. **Excerpt include**: these are excerpt include macros.

Another example is one of the ways we use the **Include Page macro**. Whenever the ellipsis (``` *** ```) appears in our documentation – for example, go to ``` Copy ``` it's actually an **Include Page macro**. We have a page with just that image on it, so we can include it whenever we need an ellipsis.

Why do we do use an **Include Page macro** for one tiny image? Well, just in case that UI element is ever changed. If we attach the image to every page, there might be 50 pages we need to update when things change; if we use an **Include Page macro**, we update once and it's changed everywhere. Doing it this way also allows us to know how many pages we're using the image on. By going to ``` Page Information ``` we can see how many incoming links there are to this page, and that tells us how many pages use the image.

**Create an inclusions library (optional)**

You can include content from any Confluence page, but you may want to create an 'inclusions library' to hold content that's specifically for re-use. The inclusions library isn't a specific feature of Confluence; the pages in the inclusions library are just like any other Confluence page. This is just a **technique** you can use if you want a place to store content that's specifically for re-use.

To create your inclusions library:

1. Choose **Create** and create a new page in your space
2. Enter a suitable title. We use '_ConfluenceInclusions' (the underscore before the title helps to let people know this page is special)
3. Enter some content and save the page
   - We enter text explaining the purpose of the inclusions library and how to re-use the content
4. Choose **Space tools > Reorder pages** and drag your new page above the space homepage
5. Go to your new inclusions page and choose **Create** to add child pages containing your re-usable content

Because you've moved the pages to the *root* of the space, they won't appear in the page tree in the sidebar. The pages will be picked up by other searches though, as they're normal Confluence pages.
1. **Inclusions library location**: drag your inclusions library here, above the rest of your documentation.

---

**Use page templates**

Creating one or more page templates can be a real time-saver if you’re creating a lot of pages with the same layout. If you're constantly adding the same macros, like panels and table of contents, save yourself from RSI and put them into a template – you can start with one, but make as many as you need to maximize your efficiency.

To create a page template that's available in all spaces:

1. Go to
   - > **General Configuration**
2. Select **Global Templates and Blueprints** from the list on the left
3. Choose the **Add global page template** button at the top-right
4. Create your template page and choose **Save**

For detailed info on page templates, see [Create a Template](#).

---

**Draft your work**

When you're creating a new page in your documentation, you'll likely want to do it over time, saving as you go, and have a select few people review it to provide feedback. A loose description of this workflow is 'draft, review, publish'.

You don't want any half-finished pages being seen by your users, and most documentation needs to be reviewed before it's finalized, so here's a technique for drafting pages and allowing for review:

1. **Create a page and restrict its permissions**
   - For example, you might restrict viewing to a group of people such as your team, or a few select individuals. On a public site, you might restrict viewing to staff members, so that the general public can't see the page.
2. **Write your page content**
3. **Share the page** with your reviewers and ask them for feedback (make sure you haven't restricted them from seeing the page!)
   - The reviewers can **add comments** to the bottom of the page or highlight text to add a comment inline.
   - If you give them permission, they can also edit the page content directly.
4. **Publish the page** when ready, by doing the following:
   - a. Delete any comments on the page
   - b. Remove page restrictions so that your audience can see it

You've now published your page. The space permissions and site permissions now determine who can see and/or update the page.

---

**Use links and anchors**

**Add links**

In any documentation site, it's essential to be able to link from one page to another, and often to specific sections on a page. You can add any URL to a Confluence page and Confluence will automatically detect
it and turn it into a link.

If you paste the URL for another page in your Confluence site, Confluence will display the link text as the page name and turn it into a relative link, meaning if the name of the page changes, Confluence will adjust the link so it doesn't break.

Add and link to anchors

The anchor macro allows you to create anchors in your documentation, which can be linked to from anywhere. I've added an anchor at the top of this page so you can click to go back to the top.

To add a macro and link to it from the same page:

1. Type \anchor in the editor, select the anchor macro and give your anchor a name (top in my example)
2. Select the text that'll link to the macro and hit Ctrl+K (Windows) or Cmd+K (Mac) (this opens the link dialog)
3. Choose Advanced from the options on the left and type # followed by your anchor name (#top in my example)

Check out our documentation for links and anchors to get the full rundown on linking to anchors on other pages and other anchor goodness.

Useful macros

Confluence ships with a great range of macros, and there are a few that are particularly useful in technical documentation. Here's a few:

Table of contents macro

The Table of Contents macro helps people navigate lengthy pages by summarizing the content structure and providing links to headings used on the page. The best part is, you don't need to do anything except add the macro; once you've added it, it'll automatically detect headings and add them to the table of contents.

Tip, Note, Info, Warning, and Panel macros

Often when creating documentation, there are elements of a page that you want to highlight or draw the the viewers' attention to. Confluence ships with the Tip, Info, Warning, Note and Panel macros, which will help you focus a viewer's attention on a particular part of your content.

Tip of the day
Use the tip macro to give your readers handy hints!

Keep track of page updates

In Confluence, it's quite usual for a number of different people to update a single page. Technical writers need to know what happens to our documents, both during review and after publication.

Watch pages or the space

So that you know when changes are made, it's a good idea to watch pages or even the entire space. That way, when changes are made to pages you're watching, or someone comments on them, you'll get an email notification letting you know who changed what.

Whenever you're on a page in your documentation space, choose the Watch button at the top-right of the page. From there, you can choose to watch just that page, or all pages in the space.
**View page history**

Confluence creates a new version of the page every time someone edits the page. The page history shows all the versions, with date, author, and any comments made on the update.

To view page history, go to the page and choose

---

> Page History

On the page history view, you can:

- View the content of a specific version of the page.
- Revert to (restore) a specific version.
- Select any two versions and ask for a comparison, to see what has changed between those two versions.

Take a look at Page History and Page Comparison Views for a detailed explanation.

**Show a list of contributors**

If you want to see at a glance who's updated a page or pages, you can add the contributors macro. This macro displays a customizable list of people who've contributed by creating, editing, or, optionally, commenting on the page.

---

**Customize PDF export**

If you're planning to provide a PDF version of your documentation – whether it be for email, download, print, or any other form of delivery – you can customize the look of the PDF by adding a title page, header, and footer.

The process you take depends on whether you're trying to customize the PDF export for one space or for your whole site, so, if you're keen to make these changes, take a look at our page on Customize Exports to PDF for more detailed instructions.

---

**Other useful tools and apps**

Confluence is already a great tool for technical documentation, but you can still add to it depending on your documentation and workflow needs. Here are some useful apps available on the Atlassian Marketplace, most of which we use ourselves, which can extend the functionality of Confluence.

New apps are hitting the marketplace all the time. This is by no means an exhaustive list!

**Scroll Versions (supported by vendor)**

.Scroll Versions, by K15t, allows you to tie versions of your documentation to versions of your product, so that when a new version of your product ships you can publish that version of your documentation. Create as many versions of your documentation as you like, make the changes you need to, and keep them up your sleeve until release time. You can even publish different variations of your documentation – like if you have versions of your documentation for different operating systems – to different spaces or Confluence instances.

**Copy Space (unsupported)**

The Copy Space add-on, by Atlassian Labs, does what its name suggests; it allows a space administrator to copy a space, including the pages within the space. Great for when you want a space template that you can copy to create other spaces.

This app is also useful when you need to archive a copy of a current space at a particular point in time, like when you're moving from one version of your product to the next – copy the space, give it a new name, and keep it wherever you like, all without losing the existing space.

ℹ️ At this point this plugin won't copy page history, blog posts and email.
**Scroll PDF Exporter (supported by vendor)**

If you're going to produce a PDF of your documentation space, wouldn't you like it to be professionally formatted? The *Scroll PDF Exporter*, by K15t, lets you style single pages or whole spaces for export, using handy PDF templates.

**Gliffy (supported by vendor)**

Create diagrams, wireframes, flowcharts and more with *Gliffy*. Gliffy features a highly intuitive drag-and-drop interface, and allows you to export your diagrams in multiple formats, including: JPEG, PNG and SVG. Add Gliffy flowcharts, UI wireframes, and network diagrams directly to your Confluence pages to communicate your ideas visually, making them easy to understand and faster to spread through your team.

**Lucidchart (supported by vendor)**

Lucidchart is available in versions for *Cloud* and *Server*, and allows you to create and insert diagrams within your Confluence Cloud environment. Quickly draw flowcharts, wireframes, UML diagrams, mind maps, and more inside our feature-rich editor.

The server version also comes with a free Visio viewer, so you can view Microsoft Visio (.vsd) files, Visio stencils (.vss) and it also supports exporting back to Visio.

**Documentation theme (discontinued)**

Confluence historically provided a theme specifically for documentation. This theme was removed in Confluence 6.0.

A number of the original Documentation theme features, such as headers, footers and the ability to add custom content to the sidebar, are available in Confluence's more modern default theme, which make it a great choice for your documentation space.

**Use Confluence as a Knowledge Base**

A knowledge base is a repository for how-to and troubleshooting information. Knowledge Bases are commonly used by IT Support teams, but can be useful for procedural and troubleshooting information in any organization or team.

Learn more about how a knowledge base helps your team work smarter

What do people want out of a knowledge base? Using an IT Support team as an example:

- Customers want fast access to a solution, and relevant search results.
- Help desk staff want to be able to create new articles quickly.
- Help Desk team leads wants the space to be self curating, and do not want to spend a lot of time manually organizing content.
- Everyone wants a way to be notified when articles they are interested in have been updated or important notices are added.

Create a knowledge base space

⚠️ You'll need the Create Space global permission to do this.

**To create your knowledge base space:**

1. Choose *Spaces > Create space > Knowledge base space*
2. Choose *Space Tools > Permissions* to set permissions for the space, including anonymous access
3. Choose *Create > How-to or Troubleshooting* and follow the prompts to create your first knowledge base article

The knowledge base space blueprint includes everything you need to get started, including article templates, and a pre-configured homepage with Livesearch and Content By Label macros.

Page *labels* are essential in knowledge base spaces. These are used to add topics to your articles, and allows your knowledge base to become self-organizing over time.
Users will generally find articles by searching, and using the topic navigation on the homepage and end of each article, rather than navigating through a tree-like page hierarchy.

When starting off your knowledge base space, it's a good idea to brainstorm a few topics to get started.

### Customize your knowledge base space

You'll need Space Admin permissions to do this.

To make it easy for your users to create knowledge base articles, such as your help desk or support team, we recommend customizing the how-to and troubleshooting article templates to make them relevant for your organization. The more guidance and structure you can put in your template, the faster it will be for your team to create great articles.

#### To edit the article templates:

1. Go to [Space Admin > Content Tools > Templates](#).
2. Edit the [How-to or Troubleshooting](#) article templates.
3. Add headings and instructional text (choose [Template > Instructional Text](#)).

You can also add additional templates, such as a policy or procedure page templates.

We also recommend customizing the look and feel of your space. Simple changes like a space logo and welcome message can make a huge difference.

#### To change the look and feel:

- Add a space logo and useful shortcuts to the sidebar (choose [Space Tools > Configure Sidebar](#)).
- Edit the homepage to add a custom welcome message.
- Edit the color scheme (choose [Space Tools > Look and Feel > Color Scheme](#)).

### Provide communication and notification options

Channels of communication with your audience, internal or external, are essential in a good knowledge base. Here are some out-of-the-box options:

- **Blog** - blog updates and important notices, and encourage people to watch for new blogs in your space.
- **Watch** - encourage people to watch pages that interest them, or watch the entire space.
- **Comments** - allow logged in users (or even anonymous users) to comment on knowledge base articles. This is a simple way to connect with your end users.
- **RSS** - create an RSS feed and add the link to your knowledge base homepage (choose [Help > Feed Builder](#)). Alternatively encourage users to create their own feed - useful if they want to keep up with particular topics (labels), rather than receive notifications for the whole space.

### Integrating your knowledge base with other Atlassian products

If your Confluence site is connected to another Atlassian product (via an application link), you can make use of these great integration features:

- **If you use any Jira application** - add a [JIRA Issues macro](#) to your troubleshooting article to provide quick access to known issues. This has the added advantage of automatically updating when an issue is resolved or its status changes. One simple way to do this would be to add some labels to Jira to indicate the issue should appear in the knowledge base (for example 'printer-kb'), and then add a Jira Issues macro with a query like 'label = 'printer-kb and status <> resolved'' on all articles with the printer topic.
- **If you use Jira Service Desk** - link a Confluence space to be used as a knowledge base. Users (including those without a Confluence license) can search your knowledge base directly from within the Service Desk customer portal. You can connect Jira Service Desk with Confluence 5.10 or later.
- **If you use Questions for Confluence Server** - add a Questions list macro to troubleshooting articles, to highlight the top questions with the same topic as the article, and an Ask a Question button to the knowledge base homepage.
Extending your knowledge base with Marketplace apps

The Atlassian Marketplace has a large number of apps for Confluence. A common addition to Knowledge Base spaces is a survey or form tool, which enables you to get feedback on the usefulness or usability of your knowledge base articles.

Search for 'knowledge base' on Marketplace and see if there is an app that's right for your knowledge base.

Use Confluence as your Intranet

Your intranet is the hub of your organization. When choosing your intranet platform, you need to ensure that the system is simple enough for non-technical users, information and content can be shared easily, and access is restricted to those within your organization.

Confluence has a host of great out-of-the-box features that allow you to share and collaborate with your colleagues, while keeping your information secure. Share things like procedures, specifications and important files – or organize company events and functions – and get your teams working together. It's one place to share, find, and collaborate to get work done.

Create your community

It's quick and easy to add users to your Confluence site. Allow people to add themselves as users of the site; invite people to sign up by sending them an invitation link; add new users manually; or use an existing directory – like an LDAP directory – for authentication and to manage users and groups.

Whichever way you choose, you can quickly build a community of Confluence users and give them access to your intranet; you'll also have a ready-made people directory.

Match your company branding

Upload your company logo, and Confluence's auto look and feel will change the color scheme to match. It'll make your intranet feel more familiar to your colleagues, and help with adoption.

A space for everything, and everything in its space

A Confluence space is essentially a container for a group of pages and blog posts with related content.

When you're starting out with Confluence, the easiest way to organize things is to create a space for each team or department within your organization. Each team's space is then a place for them to create and share pages, blog posts, meeting notes, files, and much more – and becomes the place to go for team members to get the information they need.

Just choose Spaces > Create space from the header, and Confluence provides a list of space blueprints to help get you started.

Each space can have its own color scheme and has a customizable home page, which you can edit to suit
your purpose – like displaying and tracking team goals and displaying a list of team members. Use the built-in ‘Team Space’ template to automatically add all members of the team to the homepage, to help everyone get to know each other.

You can set permissions for each space, so if there’s sensitive information that should only been seen by certain users or groups, it's easy to secure it with Confluence.

Don't feel restricted to creating spaces for teams though; you can also create spaces for projects (large or small), events, and anything else where you want to collect information under a common heading or permissions structure.

Once you have some spaces set up, create some pages and blog posts to give your colleagues an example of how Confluence can be used, then invite them to create their own pages and blogs.

Add a personal space

Every Confluence user, including you, can also create their own personal space; it can be a place to keep your own work, add shortcuts to your most used content, and you even get your own blog for sharing your ideas and opinions with the rest of your organization (or just those that you want to see them).

Create pages, meeting notes and more

You can create pages for anything you want in Confluence - meeting notes, project plans, decisions, and more. Pages are editable so others can contribute and keep them up to date after you create them. Choose Create from the Confluence header and choose a blank page, or use a template to get you started.

Type your page, change its layout, add images and links, and do it all without any specialist skills or training. You can also attach files – allowing everyone in a team access to assets that are critical to the project – like mockups and requirements.

Confluence also offers a series of useful built-in page blueprints, which help you with the content and formatting of the page. The meeting notes and decisions blueprints are two that can be really useful when others need to be in-the-know about what happened, and why it happened.

Avoid the reply-all and blog about it

Each space you create in Confluence has its own blog, where you and your teams can share news and events, discuss important projects and developments, or congratulate a teammate for a special effort; blogging is a great way to foster company culture and celebrate achievements across your organization.

You can watch any blog to make sure you get updated when there's a new post. Blog posts are automatically organized by date, and grouped by year and month, so they're also easy to find.

Share stuff that matters

If you need to be sure that the right people see a page or blog post, Confluence offers a range of ways to make sure you can get their attention. Type the @ symbol and the name of a Confluence user to mention the m in a page, blog post, or comment. They’ll get an email notification that you've mentioned them, with a link to the page, post or comment.

There's also a Share button at the top right of every page. Type the name or email address of a user or group and send them a short message with a link to the content you're sharing.

Watch and learn

Don't miss out on important updates. Watching spaces, pages, and blogs is a great way to stay up-to-date with what's happening in your own team, or any other team or person you need to keep up with. When you watch something, you'll get email updates when changes are made or a comment is added.

The Confluence dashboard also has a recent activity feed, which allows you and your team to see what's trending throughout the company or in your network.
Let team collaboration take on a life of its own

If you want to communicate in-the-moment, Hipchat – our private service for chat, video, and screen sharing – is built for teams. Share ideas and files in persistent group chat rooms, or chat 1-1 for that personal touch. Hipchat integrates with Confluence, so you can get real-time notifications in Hipchat whenever new information is shared in Confluence pages and blogs.

Got a question (that’s not rhetorical)? Why not ask your team? Questions for Confluence is an add-on for Confluence that gives you knowledge sharing with your own Q&A service. Run company-wide polls to gauge reaction to a new marketing initiative, or let people vote on the venue for the Christmas party. Ask questions, get answers, and identify experts.

You can also try Team Calendars for Confluence for organizing and sharing team events, leave, and other important appointments. Embed each team’s calendar on their home page so that everyone knows what’s happening, and when.

Confluence for Software Teams
